From: slay@netcom.com (Sandy Lynch)
Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow
members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were
ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

Well, are you sure it wasn't VK9LX? Or maybe I'm wrong here. Anyway,
the QSL info I copied indicated QSL via VK2ICV. Hope that helps.

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are
entering
a very exciting part of the solar cycle for HF communications; so the
next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is

"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just
trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

73,

Bob KF6JHG

Subject: QSL - HW TO GET!

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are
sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

I think it was VE3BW, and it was definitely a Canadian, but...

Hold your cards. There's a postal strike in progress up there, and
the USPS is returning mail to Canada. (the sticker says if you take
it to a post office, they'll refund your postage. Personally, I wish
they'd just hold it at the P.O. until the strike is over..)

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit, 150-200 miles isn't out of the question even when ten is dead. Ten may be the best overall DX band we have during solar cycle peaks, but don't write it off at other times. Spradic E (Es) propagation can provide nice single-hop contacts out to about 1200 miles and occasional double-hop to twice that distance (sometimes more). Es peaks EVERY YEAR roughly May through August (plus or minus) and for a few weeks right around Christmas/New Year. But, like the name says, it's sporadic; the band can be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

>under

>less than ideal band conditions?

When the sunspot cycle is in the wrong phase, 10 meters is very quiet. Many
band openings occur without anyone being aware of it because all think it is
dead. South America is available many days when the band is 'dead' but there
is nobody there to talk to. That would be what is called Transequadoreal skip
and gets even stronger when 10 opens up.
The curse of 10 meters is the low powered rigs most of us use there.
Regardless of all the tales about working 10 with 5 watts and a wet noodle for
an antenna, the fact is that a good power level and a good antenna will open
the band up quite a bit. Od course, there has to be someone else with a like
rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for
ground wave and a little close for F layer and most Sporadic E conditions. The
best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

Bob (cqbdiaz@pacbell.net) wrote:
: "local"? Can one still talk to someone on 10M, say 300 miles away
: under: less than ideal band conditions?

Ten may sound dead but still support openings of a few hundred
miles; you may not hear anybody on it but a CQ may still bring
a surprising QSO you wouldn't have expected. Still, ground wave
on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on
low power--no problem! Good sigs and low noise, with DX just
swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car;
worked two new countries on it semi-recently on the way home
from work. And the beacon on 28200? I'll tune to that on
the drive, to see what's open. I hear the SA beacons (LU,
OA, YV) coming in pretty well in North Carolina just about
every afternoon.

Good luck! Have fun! 73!

Message-ID: <65i7v9$b21@dfw-ixnews11.ix.netcom.com>
Source record: 31095

I'm looking for a good vertical antenna. I have convinced my new landlord to allow a vertical antenna on the roof, although he was pretty cool to the idea of a beam. I have done a little research into the verticals offered by various manufacturers, and have heard good and bad about several. I would like any helpful information and testimonials which may be offered here. I seem to be leaning towards either a Cushcraft R-7000 or Hy-Gain DX 77 but definitely would like some feedback on this.

Also, has anyone heard anything about Gap Antenna's Titan DX? (Advertised back pages of CQ Magazine) Is it also one I should consider?

Thanks ES 73,

Dave, KQ6SL

2976. AM external antenna in crowded area

Newsgroup: rec.radio.amateur.dx
Date: 1997-11-26 00:00:00 UTC
From: mccarthy@NOSPAMkearney.net
Message-ID: <347bc05b.4174253@news.kearney.net>
Source record: 31252

First, no, I can't move.
Ok, with that out of the way, I live in a mobile home park and need suggestions for an external AM antenna. I've built a loop, which works great...except of course, the metal siding of my house offsets it. And it's cold outside. So no, I'm not going to sit in the yard :) This isn't so much for DXing as a hobby as it is just being able to listen to a few 50kW stations within a few hundred miles for evening enjoyment. While this may not be the most appropriate group to post to, certainly noboy would know better then the folks here.
Trying first to use the loop, I can put it outside, connect a wire to one of the leads to the tuning capacitor and have relative sucess. My problem here of course is that I need to go outside to tune it, then come inside and tune the radio again...repeating the process for each station a number of times. Also, I'm worried that it would interest neighbor kids too much, so it must come in each night before I go to bed.
My next attempt was a suggestion by a friend of a single wire of about 70 feet. I ran it out the window and lengthways with the house, suspended about 8 feet off the ground. As of now, it's close to the house and I'm sure that again the house is presenting problems - it is very directional (working only for stations on the open side) While this provided me a good amount of success, I'm hoping for suggestions that would be even better.
I have a decent sized yard and one open side - to the street. There are no above ground power lines in the area. As for having external wires, if I put them up so they are straight and a 'clean' look, my neighbors won't complain. However, I would prefer to put anything on the side opposite the house - which is less open, but also less visable to otheres.
To simplify things, I drew up a quick layout of my house and it's relationship to surrounding buildings. Not wanting to post anything binary to this group, I have placed the image in my web account. Just point directly to:
http://members.tripod.com/~placidpup/myplace.gif
If you would, please take a look and then describe what you would do if you were in my situation. Feel free to edit the image with your ideas and mail the edited version back to me. PLEASE do not post an edited version back to this group.
Any and all suggestions are welcome, ones applied specificly to the layout of my home are even more prefferable.
Thanks,
Shane McCarthy
mccarthy@kearney.net

PS. While looking at the image, if you have suggestions for a SW external antenna please feel free to include those too. I bought a DX-390 awhile back, but a friend is still fixing it, so I'm still listening to AM. Thanks again.

From: slay@netcom.com (Sandy Lynch)
Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow

members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were
ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

Regards,
Sandy W7BX

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are
entering
a very exciting part of the solar cycle for HF communications; so the
next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is
"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just

trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

73,

Bob KF6JHG

Subject: QSL - HW TO GET!

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are

sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit, 150-200 miles isn't out of the question even when ten is dead. Ten may be the best overall DX band we have during solar cycle peaks, but don't write it off at other times. Spradic E (Es) propagation can provide nice single-hop contacts out to about 1200 miles and occasional double-hop to twice that distance (sometimes more). Es peaks EVERY YEAR roughly May through August (plus or minus) and for a few weeks right around Christmas/New Year. But, like the name says, it's sporadic; the band can be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

When the sunspot cycle is in the wrong phase, 10 meters is very quiet. Many
band openings occur without anyone being aware of it because all think it is
dead. South America is available many days when the band is 'dead' but there
is nobody there to talk to. That would be what is called Transequadoreal skip
and gets even stronger when 10 opens up.

The curse of 10 meters is the low powered rigs most of us use there.
Regardless of all the tales about working 10 with 5 watts and a wet noodle for an antenna, the fact is that a good power level and a good antenna will open the band up quite a bit. Od course, there has to be someone else with a like rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for ground wave and a little close for F layer and most Sporadic E conditions. The best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

Ten may sound dead but still support openings of a few hundred miles; you may not hear anybody on it but a CQ may still bring a surprising QSO you wouldn't have expected. Still, ground wave on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on low power--no problem! Good sigs and low noise, with DX just swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car; worked two new countries on it semi-recently on the way home from work. And the beacon on 28200? I'll tune to that on the drive, to see what's open. I hear the SA beacons (LU, OA, YV) coming in pretty well in North Carolina just about every afternoon.

Good luck! Have fun! 73!

Date: Wed, 26 Nov 1997 06:23:27 GMT
From: mccarthy@NOSPAMkearney.net (Shane McCarthy)
Subject: AM external antenna in crowded area

First, no, I can't move.
Ok, with that out of the way, I live in a mobile home park and
need suggestions for an external AM antenna. I've built a loop, which
works great...except of course, the metal siding of my house offsets
it. And it's cold outside. So no, I'm not going to sit in the yard
:) This isn't so much for DXing as a hobby as it is just being able
```

to listen to a few 50kW stations within a few hundred miles for evening enjoyment. While this may not be the most appropriate group to post to, certainly noboy would know better then the folks here.
Trying first to use the loop, I can put it outside, connect a wire to one of the leads to the tuning capacitor and have relative sucess. My problem here of course is that I need to go outside to tune it, then come inside and tune the radio again...repeating the process for each station a number of times. Also, I'm worried that it would interest neighbor kids too much, so it must come in each night before I go to bed.
My next attempt was a suggestion by a friend of a single wire of about 70 feet. I ran it out the window and lengthways with the house, suspended about 8 feet off the ground. As of now, it's close to the house and I'm sure that again the house is presenting problems - it is very directional (working only for stations on the open side) While this provided me a good amount of success, I'm hoping for suggestions that would be even better.
I have a decent sized yard and one open side - to the street.
There are no above ground power lines in the area. As for having external wires, if I put them up so they are straight and a 'clean' look, my neighbors won't complain. However, I would prefer to put anything on the side opposite the house - which is less open, but also less visable to otheres.
To simplify things, I drew up a quick layout of my house and it's relationship to surrounding buildings. Not wanting to post anything binary to this group, I have placed the image in my web account. Just point directly to:
http://members.tripod.com/~placidpup/myplace.gif
If you would, please take a look and then describe what you would do if you were in my situation. Feel free to edit the image with your ideas and mail the edited version back to me. PLEASE do not post an edited version back to this group.
Any and all suggestions are welcome, ones applied specificly to the layout of my home are even more prefferable.
Thanks,
Shane McCarthy
mccarthy@kearney.net

PS. While looking at the image, if you have suggestions for a SW external antenna please feel free to include those too. I bought a DX-390 awhile back, but a friend is still fixing it, so I'm still listening to AM. Thanks again.

From: slay@netcom.com (Sandy Lynch)
Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow
members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were
ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are
entering
a very exciting part of the solar cycle for HF communications; so the

next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is
"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just
trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

73,

Bob KF6JHG

Subject: QSL - HW TO GET!

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are
sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

Anybody have a route for VK9XL for 03/07/96? I worked them
(at least I thought I did ;-) on 40 CW and they were signing
/LH for Lord Howe. So far I've found W7NI for 4/96 and UA0ZDA
for 2/96 through the usual sources. I've sent two cards to W7NI
with no response. Any ideas?

Thanks & 73,

Fred, N9FH

: under
: less than ideal band conditions?

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit,
150-200 miles isn't out of the question even when ten is dead. Ten may be
the best overall DX band we have during solar cycle peaks, but don't
write it off at other times. Spradic E (Es) propagation can provide nice
single-hop contacts out to about 1200 miles and occasional double-hop to
twice that distance (sometimes more). Es peaks EVERY YEAR roughly May
through August (plus or minus) and for a few weeks right around
Christmas/New Year. But, like the name says, it's sporadic; the band can
be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX
excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

When the sunspot cycle is in the wrong phase, 10 meters is very quiet.
Many
band openings occur without anyone being aware of it because all think it is
dead. South America is available many days when the band is 'dead' but there
is nobody there to talk to. That would be what is called Transequadoreal skip
and gets even stronger when 10 opens up.
The curse of 10 meters is the low powered rigs most of us use there.
Regardless of all the tales about working 10 with 5 watts and a wet noodle for
an antenna, the fact is that a good power level and a good antenna will open
the band up quite a bit. Od course, there has to be someone else with a like
rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for
ground wave and a little close for F layer and most Sporadic E conditions. The
best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

Ten may sound dead but still support openings of a few hundred
miles; you may not hear anybody on it but a CQ may still bring
a surprising QSO you wouldn't have expected. Still, ground wave
on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on
low power--no problem! Good sigs and low noise, with DX just
swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car;
worked two new countries on it semi-recently on the way home
from work. And the beacon on 28200? I'll tune to that on
the drive, to see what's open. I hear the SA beacons (LU,
OA, YV) coming in pretty well in North Carolina just about
every afternoon.

Good luck! Have fun! 73!

I have a Sommer XP507 antenna for sale. It is in perfect shape, about 4
years old that I am needing to get rid of. It is assembled and laying on
some saw horses in my back yard and can be checked with a meter for
operation if you like. It works 10-12-15-15-20-30-40 meter bands, 15
foot boom, 7 elements, and about 75 pounds.
I WILL not ship this antenna so if you are interested and live close

enough, email me. I am asking $275.00 or best offer.

Subject: THIS JUST IN

NEW TEMPORARY LICENSE CLASS PROPOSED
In an unprecedented event, on Tuesday this past week, all
amateur radio vendors, and many national electronic chain
outlets, in an effort to shore-up the sagging radio sales
picture, were given the authority to issue amateur radio
call signs to new radio purchasers.
The ruling from the FCC in docket APR-001 allows for the
call sign block of "WT" along with the district #, for all vendors
to issue. These "try before you study" licenses will be issued
for a thirty day on-air trial period at the general class level.
It works like this: a potential ham who doesn't know if the
hobby is worth the effort of all the study time, is authorized to
operate for a period of one month along with the purchase of a
radio. The new operator will be authorized at the General class
level with a "WT" call sign i.e. WT2XYZ.
At the end of the trial period, the new ham can enroll in a
class, or take their exam from a local VEC or from the vendor,
which is also now authorized to give radio exams. If the
operator decides the hobby isn't worth the aggravation they find
on the HF bands, he/she can return the radio for a full refund.

SB DX ARL ARLD049
ARLD049 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, The 599Rpt, G4BUE and The Daily DX. Thanks to all.

ROTUMA ISLAND, 3D2. Look for 3D2AG/p to be active on 80 to 10 meters, including the newer bands until early January 1998. QSL via 3D2AG.

CYPRUS, 5B. Look for UA9YAB, RA9JX, RA9JR, UA9MA, UN7FZ and UN7FW to be QRV as 5B4/homecalls from November 25 to early December. They will also participate in the CQ WW CW Contest as either P3A or H2A. QSL contest call via W3HNK. QSL all others to homecalls.

WESTERN MALAYSIA, 9M2. Don, G3OZF, will be QRV as 9M2/G3OZF from Pulau Pangkor, IOTA AS-072, from November 24 to December 2. Activity will be on 80 to 10 meters, with an emphasis on CW. He will also be active in the CQ WW CW Contest. QSL to home call.

QATAR, A7. Dave, KA5TQF, Tom, WT2O, and Ali, A71CX will be QRV as A72O from IOTA AS-088 from November 23 to 25. QSL via KA5TQF.

CUBA, CO. A group of amateurs from Sweden, Denmark and Cuba plan to activate T49C from November 25 to December 1 on the RS and FO satellites and possibly on AO-10. Activity is expected on 6 and 2 meters and 70 cm. Activity on 160 to 10 meters is planned as well. They may participate in the CQ WW CW Contest using this call. QSL via CO2OJ.

MOLDOVA, ER. Slawa, ER1LW, is QRV on the weekends on the newer bands using CW and SSB. He has also been active on RTTY. QSL to home call.

MINAMI TORISHIMA. JD1. Ryoichi, JL1KFR, will be QRV from November 25 to December 15 as JL1KFR/JD1. He is here to work on the weather station, so operating time will be limited. Activity will be on 80 to 10 meters, using mainly CW around 0900 to 1100z. QSL to home call.

CRETE, SV9. Karl, DJ5IL, will be QRV as J49IL from November 25 to December 3 using CW and SSB on 40 to 10 meters. He will also participate in the CQ WW CW Contest. QSL to home call.

GABON, TR. Jean, TR8XX is QRV on 160 meters around 0515z. QSL to home call.

ANTIGUA, V2. WA3WSJ and K3TEJ will be QRV as V26ED and V26KW, respectively, from November 25 to December 2. Activity will be on all HF bands, using CW and SSB. They will participate in the CQ WW CW Contest as V26KW. Amir, 4X6TT, is QRV now as V29TT. His length of stay is unknown. QSL to home calls.

NAMIBIA, V5. Frank, DL7UFS, is QRV as V5/DL7UFS from Swakopmund using mostly CW on 20, 15 and 10 meters. His length of stay is unknown. QSL to home call.

From: mccarthy@NOSPAMkearney.net (Shane McCarthy)
Subject: AM external antenna in crowded area

First, no, I can't move.
Ok, with that out of the way, I live in a mobile home park and need suggestions for an external AM antenna. I've built a loop, which works great...except of course, the metal siding of my house offsets it. And it's cold outside. So no, I'm not going to sit in the yard :) This isn't so much for DXing as a hobby as it is just being able to listen to a few 50kW stations within a few hundred miles for evening enjoyment. While this may not be the most appropriate group to post to, certainly noboy would know better then the folks here.
Trying first to use the loop, I can put it outside, connect a wire to one of the leads to the tuning capacitor and have relative sucess. My problem here of course is that I need to go outside to tune it, then come inside and tune the radio again...repeating the process for each station a number of times. Also, I'm worried that it would interest neighbor kids too much, so it must come in each night before I go to bed.
My next attempt was a suggestion by a friend of a single wire of about 70 feet. I ran it out the window and lengthways with the house, suspended about 8 feet off the ground. As of now, it's close to the house and I'm sure that again the house is presenting problems - it is very directional (working only for stations on the open side) While this provided me a good amount of success, I'm hoping for suggestions that would be even better.
I have a decent sized yard and one open side - to the street. There are no above ground power lines in the area. As for having external wires, if I put them up so they are straight and a 'clean' look, my neighbors won't complain. However, I would prefer to put anything on the side opposite the house - which is less open, but also less visable to otheres.
To simplify things, I drew up a quick layout of my house and it's relationship to surrounding buildings. Not wanting to post anything binary to this group, I have placed the image in my web account. Just point directly to:
http://members.tripod.com/~placidpup/myplace.gif
If you would, please take a look and then describe what you would do if you were in my situation. Feel free to edit the image with your ideas and mail the edited version back to me. PLEASE do not post an edited version back to this group.
Any and all suggestions are welcome, ones applied specificly to the layout of my home are even more prefferable.
Thanks,
Shane McCarthy
mccarthy@kearney.net

PS. While looking at the image, if you have suggestions for a SW external antenna please feel free to include those too. I bought a DX-390 awhile back, but a friend is still fixing it, so I'm still listening to AM. Thanks again.

From: slay@netcom.com (Sandy Lynch)
Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow
members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were
ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are

entering
a very exciting part of the solar cycle for HF communications; so the
next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is
"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just
trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

73,

Bob KF6JHG

Subject: QSL - HW TO GET!

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are
sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

I think it was VE3BW, and it was definitely a Canadian, but...

Hold your cards. There's a postal strike in progress up there, and
the USPS is returning mail to Canada. (the sticker says if you take
it to a post office, they'll refund your postage. Personally, I wish
they'd just hold it at the P.O. until the strike is over..)

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit,
150-200 miles isn't out of the question even when ten is dead. Ten may be
the best overall DX band we have during solar cycle peaks, but don't
write it off at other times. Spradic E (Es) propagation can provide nice
single-hop contacts out to about 1200 miles and occasional double-hop to
twice that distance (sometimes more). Es peaks EVERY YEAR roughly May
through August (plus or minus) and for a few weeks right around
Christmas/New Year. But, like the name says, it's sporadic; the band can
be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX
excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

>under
>less than ideal band conditions?

When the sunspot cycle is in the wrong phase, 10 meters is very quiet.
Many
band openings occur without anyone being aware of it because all think it is
dead. South America is available many days when the band is 'dead' but there
is nobody there to talk to. That would be what is called Transequadoreal skip
and gets even stronger when 10 opens up.
The curse of 10 meters is the low powered rigs most of us use there.
Regardless of all the tales about working 10 with 5 watts and a wet noodle for
an antenna, the fact is that a good power level and a good antenna will open
the band up quite a bit. Od course, there has to be someone else with a like
rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for
ground wave and a little close for F layer and most Sporadic E conditions. The
best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

Bob (cqbdiaz@pacbell.net) wrote:
: "local"? Can one still talk to someone on 10M, say 300 miles away
: under: less than ideal band conditions?

Ten may sound dead but still support openings of a few hundred
miles; you may not hear anybody on it but a CQ may still bring
a surprising QSO you wouldn't have expected. Still, ground wave
on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on
low power--no problem! Good sigs and low noise, with DX just
swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car;
worked two new countries on it semi-recently on the way home
from work. And the beacon on 28200? I'll tune to that on
the drive, to see what's open. I hear the SA beacons (LU,

OA, YV) coming in pretty well in North Carolina just about
every afternoon.

Good luck! Have fun! 73!

Date: Wed, 26 Nov 1997 06:23:27 GMT
From: mccarthy@NOSPAMkearney.net (Shane McCarthy)
Subject: AM external antenna in crowded area

First, no, I can't move.
Ok, with that out of the way, I live in a mobile home park and
need suggestions for an external AM antenna. I've built a loop, which
works great...except of course, the metal siding of my house offsets
it. And it's cold outside. So no, I'm not going to sit in the yard
:) This isn't so much for DXing as a hobby as it is just being able
to listen to a few 50kW stations within a few hundred miles for
evening enjoyment. While this may not be the most appropriate group
to post to, certainly noboy would know better then the folks here.
Trying first to use the loop, I can put it outside, connect a
wire to one of the leads to the tuning capacitor and have relative
sucess. My problem here of course is that I need to go outside to
tune it, then come inside and tune the radio again...repeating the
process for each station a number of times. Also, I'm worried that it
would interest neighbor kids too much, so it must come in each night
before I go to bed.
My next attempt was a suggestion by a friend of a single wire of
about 70 feet. I ran it out the window and lengthways with the house,
suspended about 8 feet off the ground. As of now, it's close to the
house and I'm sure that again the house is presenting problems - it is
very directional (working only for stations on the open side) While
this provided me a good amount of success, I'm hoping for suggestions
that would be even better.
I have a decent sized yard and one open side - to the street.
There are no above ground power lines in the area. As for having
external wires, if I put them up so they are straight and a 'clean'
look, my neighbors won't complain. However, I would prefer to put
anything on the side opposite the house - which is less open, but also
less visable to otheres.
To simplify things, I drew up a quick layout of my house and it's

relationship to surrounding buildings. Not wanting to post anything
binary to this group, I have placed the image in my web account. Just
point directly to:
http://members.tripod.com/~placidpup/myplace.gif
If you would, please take a look and then describe what you would
do if you were in my situation. Feel free to edit the image with your
ideas and mail the edited version back to me. PLEASE do not post an
edited version back to this group.
Any and all suggestions are welcome, ones applied specificly to
the layout of my home are even more prefferable.
Thanks,
Shane McCarthy
mccarthy@kearney.net

PS. While looking at the image, if you have suggestions for a SW
external antenna please feel free to include those too. I bought a
DX-390 awhile back, but a friend is still fixing it, so I'm still
listening to AM. Thanks again.

From: slay@netcom.com (Sandy Lynch)
Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow
members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were

ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are
entering
a very exciting part of the solar cycle for HF communications; so the
next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is
"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just
trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

73,

Bob KF6JHG

Subject: QSL - HW TO GET!

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are
sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

I think it was VE3BW, and it was definitely a Canadian, but...

Hold your cards. There's a postal strike in progress up there, and
the USPS is returning mail to Canada. (the sticker says if you take
it to a post office, they'll refund your postage. Personally, I wish
they'd just hold it at the P.O. until the strike is over..)

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit, 150-200 miles isn't out of the question even when ten is dead. Ten may be the best overall DX band we have during solar cycle peaks, but don't write it off at other times. Spradic E (Es) propagation can provide nice single-hop contacts out to about 1200 miles and occasional double-hop to twice that distance (sometimes more). Es peaks EVERY YEAR roughly May through August (plus or minus) and for a few weeks right around Christmas/New Year. But, like the name says, it's sporadic; the band can be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

>less than ideal band conditions?

When the sunspot cycle is in the wrong phase, 10 meters is very quiet.
Many
band openings occur without anyone being aware of it because all think it is
dead. South America is available many days when the band is 'dead' but there
is nobody there to talk to. That would be what is called Transequadoreal skip
and gets even stronger when 10 opens up.
The curse of 10 meters is the low powered rigs most of us use there.
Regardless of all the tales about working 10 with 5 watts and a wet noodle for
an antenna, the fact is that a good power level and a good antenna will open
the band up quite a bit. Od course, there has to be someone else with a like

rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for
ground wave and a little close for F layer and most Sporadic E conditions. The
best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

: under: less than ideal band conditions?

Ten may sound dead but still support openings of a few hundred
miles; you may not hear anybody on it but a CQ may still bring
a surprising QSO you wouldn't have expected. Still, ground wave
on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on
low power--no problem! Good sigs and low noise, with DX just
swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car;
worked two new countries on it semi-recently on the way home
from work. And the beacon on 28200? I'll tune to that on
the drive, to see what's open. I hear the SA beacons (LU,
OA, YV) coming in pretty well in North Carolina just about
every afternoon.

Good luck! Have fun! 73!

I have a Sommer XP507 antenna for sale. It is in perfect shape, about 4
years old that I am needing to get rid of. It is assembled and laying on
some saw horses in my back yard and can be checked with a meter for
operation if you like. It works 10-12-15-15-20-30-40 meter bands, 15
foot boom, 7 elements, and about 75 pounds.
I WILL not ship this antenna so if you are interested and live close
enough, email me. I am asking $275.00 or best offer.

We also need a separate, dedicated newsgroup specially for articles
flaming people for posting to inappropriate newsgroups!

BTW, I believe at least three of the four topics you have listed
already co-exist in a single newsgroup .... it's called alt.tasteless

:-)

Subject: THIS JUST IN

NEW TEMPORARY LICENSE CLASS PROPOSED
In an unprecedented event, on Tuesday this past week, all
amateur radio vendors, and many national electronic chain
outlets, in an effort to shore-up the sagging radio sales
picture, were given the authority to issue amateur radio
call signs to new radio purchasers.
The ruling from the FCC in docket APR-001 allows for the
call sign block of "WT" along with the district #, for all vendors
to issue. These "try before you study" licenses will be issued
for a thirty day on-air trial period at the general class level.
It works like this: a potential ham who doesn't know if the
hobby is worth the effort of all the study time, is authorized to
operate for a period of one month along with the purchase of a
radio. The new operator will be authorized at the General class
level with a "WT" call sign i.e. WT2XYZ.
At the end of the trial period, the new ham can enroll in a
class, or take their exam from a local VEC or from the vendor,
which is also now authorized to give radio exams. If the
operator decides the hobby isn't worth the aggravation they find
on the HF bands, he/she can return the radio for a full refund.

SB DX ARL ARLD049
ARLD049 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, The 599Rpt, G4BUE and The Daily DX. Thanks to all.

ROTUMA ISLAND, 3D2. Look for 3D2AG/p to be active on 80 to 10 meters, including the newer bands until early January 1998. QSL via 3D2AG.

CYPRUS, 5B. Look for UA9YAB, RA9JX, RA9JR, UA9MA, UN7FZ and UN7FW to be QRV as 5B4/homecalls from November 25 to early December. They will also participate in the CQ WW CW Contest as either P3A or H2A. QSL contest call via W3HNK. QSL all others to homecalls.

WESTERN MALAYSIA, 9M2. Don, G3OZF, will be QRV as 9M2/G3OZF from Pulau Pangkor, IOTA AS-072, from November 24 to December 2. Activity will be on 80 to 10 meters, with an emphasis on CW. He will also be active in the CQ WW CW Contest. QSL to home call.

QATAR, A7. Dave, KA5TQF, Tom, WT2O, and Ali, A71CX will be QRV as A72O from IOTA AS-088 from November 23 to 25. QSL via KA5TQF.

CUBA, CO. A group of amateurs from Sweden, Denmark and Cuba plan to activate T49C from November 25 to December 1 on the RS and FO satellites and possibly on AO-10. Activity is expected on 6 and 2 meters and 70 cm. Activity on 160 to 10 meters is planned as well. They may participate in the CQ WW CW Contest using this call. QSL via CO2OJ.

MOLDOVA, ER. Slawa, ER1LW, is QRV on the weekends on the newer bands using CW and SSB. He has also been active on RTTY. QSL to home call.

MINAMI TORISHIMA. JD1. Ryoichi, JL1KFR, will be QRV from November 25 to December 15 as JL1KFR/JD1. He is here to work on the weather station, so operating time will be limited. Activity will be on 80 to 10 meters, using mainly CW around 0900 to 1100z. QSL to home call.

CRETE, SV9. Karl, DJ5IL, will be QRV as J49IL from November 25 to December 3 using CW and SSB on 40 to 10 meters. He will also participate in the CQ WW CW Contest. QSL to home call.

GABON, TR. Jean, TR8XX is QRV on 160 meters around 0515z. QSL to home call.

ANTIGUA, V2. WA3WSJ and K3TEJ will be QRV as V26ED and V26KW, respectively, from November 25 to December 2. Activity will be on all HF bands, using CW and SSB. They will participate in the CQ WW CW Contest as V26KW. Amir, 4X6TT, is QRV now as V29TT. His length of stay is unknown. QSL to home calls.

NAMIBIA, V5. Frank, DL7UFS, is QRV as V5/DL7UFS from Swakopmund using mostly CW on 20, 15 and 10 meters. His length of stay is unknown. QSL to home call.

Date: Wed, 26 Nov 1997 06:23:27 GMT
From: mccarthy@NOSPAMkearney.net (Shane McCarthy)
Subject: AM external antenna in crowded area

First, no, I can't move.
Ok, with that out of the way, I live in a mobile home park and
need suggestions for an external AM antenna. I've built a loop, which
works great...except of course, the metal siding of my house offsets
it. And it's cold outside. So no, I'm not going to sit in the yard
:) This isn't so much for DXing as a hobby as it is just being able
to listen to a few 50kW stations within a few hundred miles for
evening enjoyment. While this may not be the most appropriate group

to post to, certainly noboy would know better then the folks here.
Trying first to use the loop, I can put it outside, connect a
wire to one of the leads to the tuning capacitor and have relative
sucess. My problem here of course is that I need to go outside to
tune it, then come inside and tune the radio again...repeating the
process for each station a number of times. Also, I'm worried that it
would interest neighbor kids too much, so it must come in each night
before I go to bed.
My next attempt was a suggestion by a friend of a single wire of
about 70 feet. I ran it out the window and lengthways with the house,
suspended about 8 feet off the ground. As of now, it's close to the
house and I'm sure that again the house is presenting problems - it is
very directional (working only for stations on the open side) While
this provided me a good amount of success, I'm hoping for suggestions
that would be even better.
I have a decent sized yard and one open side - to the street.
There are no above ground power lines in the area. As for having
external wires, if I put them up so they are straight and a 'clean'
look, my neighbors won't complain. However, I would prefer to put
anything on the side opposite the house - which is less open, but also
less visable to otheres.
To simplify things, I drew up a quick layout of my house and it's
relationship to surrounding buildings. Not wanting to post anything
binary to this group, I have placed the image in my web account. Just
point directly to:
http://members.tripod.com/~placidpup/myplace.gif
If you would, please take a look and then describe what you would
do if you were in my situation. Feel free to edit the image with your
ideas and mail the edited version back to me. PLEASE do not post an
edited version back to this group.
Any and all suggestions are welcome, ones applied specificly to
the layout of my home are even more prefferable.
Thanks,
Shane McCarthy
mccarthy@kearney.net

PS. While looking at the image, if you have suggestions for a SW
external antenna please feel free to include those too. I bought a
DX-390 awhile back, but a friend is still fixing it, so I'm still
listening to AM. Thanks again.

Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow
members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were
ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

Well, are you sure it wasn't VK9LX? Or maybe I'm wrong here. Anyway,
the QSL info I copied indicated QSL via VK2ICV. Hope that helps.

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are
entering
a very exciting part of the solar cycle for HF communications; so the
next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is

"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just
trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

Subject: QSL - HW TO GET!

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are
sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

I think it was VE3BW, and it was definitely a Canadian, but...

Hold your cards. There's a postal strike in progress up there, and
the USPS is returning mail to Canada. (the sticker says if you take
it to a post office, they'll refund your postage. Personally, I wish
they'd just hold it at the P.O. until the strike is over..)

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit, 150-200 miles isn't out of the question even when ten is dead. Ten may be the best overall DX band we have during solar cycle peaks, but don't write it off at other times. Spradic E (Es) propagation can provide nice single-hop contacts out to about 1200 miles and occasional double-hop to twice that distance (sometimes more). Es peaks EVERY YEAR roughly May through August (plus or minus) and for a few weeks right around Christmas/New Year. But, like the name says, it's sporadic; the band can be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

>less than ideal band conditions?

When the sunspot cycle is in the wrong phase, 10 meters is very quiet.
Many
band openings occur without anyone being aware of it because all think it is dead. South America is available many days when the band is 'dead' but there is nobody there to talk to. That would be what is called Transequadoreal skip and gets even stronger when 10 opens up.
The curse of 10 meters is the low powered rigs most of us use there.
Regardless of all the tales about working 10 with 5 watts and a wet noodle for an antenna, the fact is that a good power level and a good antenna will open the band up quite a bit. Od course, there has to be someone else with a like rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for ground wave and a little close for F layer and most Sporadic E conditions. The best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

Bob (cqbdiaz@pacbell.net) wrote:
: "local"? Can one still talk to someone on 10M, say 300 miles away
: under: less than ideal band conditions?

Ten may sound dead but still support openings of a few hundred miles; you may not hear anybody on it but a CQ may still bring a surprising QSO you wouldn't have expected. Still, ground wave on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on low power--no problem! Good sigs and low noise, with DX just swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car; worked two new countries on it semi-recently on the way home from work. And the beacon on 28200? I'll tune to that on the drive, to see what's open. I hear the SA beacons (LU, OA, YV) coming in pretty well in North Carolina just about every afternoon.

Good luck! Have fun! 73!

We also need a separate, dedicated newsgroup specially for articles
flaming people for posting to inappropriate newsgroups!

BTW, I believe at least three of the four topics you have listed
already co-exist in a single newsgroup .... it's called alt.tasteless

:-)

Subject: THIS JUST IN

NEW TEMPORARY LICENSE CLASS PROPOSED
In an unprecedented event, on Tuesday this past week, all
amateur radio vendors, and many national electronic chain
outlets, in an effort to shore-up the sagging radio sales
picture, were given the authority to issue amateur radio
call signs to new radio purchasers.
The ruling from the FCC in docket APR-001 allows for the
call sign block of "WT" along with the district #, for all vendors
to issue. These "try before you study" licenses will be issued
for a thirty day on-air trial period at the general class level.
It works like this: a potential ham who doesn't know if the
hobby is worth the effort of all the study time, is authorized to
operate for a period of one month along with the purchase of a
radio. The new operator will be authorized at the General class
level with a "WT" call sign i.e. WT2XYZ.
At the end of the trial period, the new ham can enroll in a
class, or take their exam from a local VEC or from the vendor,
which is also now authorized to give radio exams. If the
operator decides the hobby isn't worth the aggravation they find
on the HF bands, he/she can return the radio for a full refund.

SB DX ARL ARLD049
ARLD049 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, QRZ DX, The 599Rpt, G4BUE and The Daily DX. Thanks to all.

ROTUMA ISLAND, 3D2. Look for 3D2AG/p to be active on 80 to 10 meters, including the newer bands until early January 1998. QSL via 3D2AG.

CYPRUS, 5B. Look for UA9YAB, RA9JX, RA9JR, UA9MA, UN7FZ and UN7FW to be QRV as 5B4/homecalls from November 25 to early December. They will also participate in the CQ WW CW Contest as either P3A or H2A. QSL contest call via W3HNK. QSL all others to homecalls.

WESTERN MALAYSIA, 9M2. Don, G3OZF, will be QRV as 9M2/G3OZF from Pulau Pangkor, IOTA AS-072, from November 24 to December 2. Activity will be on 80 to 10 meters, with an emphasis on CW. He will also be active in the CQ WW CW Contest. QSL to home call.

QATAR, A7. Dave, KA5TQF, Tom, WT2O, and Ali, A71CX will be QRV as A72O from IOTA AS-088 from November 23 to 25. QSL via KA5TQF.

CUBA, CO. A group of amateurs from Sweden, Denmark and Cuba plan to activate T49C from November 25 to December 1 on the RS and FO satellites and possibly on AO-10. Activity is expected on 6 and 2 meters and 70 cm. Activity on 160 to 10 meters is planned as well. They may participate in the CQ WW CW Contest using this call. QSL via CO2OJ.

MOLDOVA, ER. Slawa, ER1LW, is QRV on the weekends on the newer bands using CW and SSB. He has also been active on RTTY. QSL to home call.

MINAMI TORISHIMA. JD1. Ryoichi, JL1KFR, will be QRV from November 25 to December 15 as JL1KFR/JD1. He is here to work on the weather station, so operating time will be limited. Activity will be on 80 to 10 meters, using mainly CW around 0900 to 1100z. QSL to home call.

CRETE, SV9. Karl, DJ5IL, will be QRV as J49IL from November 25 to December 3 using CW and SSB on 40 to 10 meters. He will also participate in the CQ WW CW Contest. QSL to home call.

GABON, TR. Jean, TR8XX is QRV on 160 meters around 0515z. QSL to home call.

ANTIGUA, V2. WA3WSJ and K3TEJ will be QRV as V26ED and V26KW, respectively, from November 25 to December 2. Activity will be on all HF bands, using CW and SSB. They will participate in the CQ WW CW Contest as V26KW. Amir, 4X6TT, is QRV now as V29TT. His length of stay is unknown. QSL to home calls.

NAMIBIA, V5. Frank, DL7UFS, is QRV as V5/DL7UFS from Swakopmund using mostly CW on 20, 15 and 10 meters. His length of stay is unknown. QSL to home call.

Date: Wed, 26 Nov 1997 06:23:27 GMT
From: mccarthy@NOSPAMkearney.net (Shane McCarthy)
Subject: AM external antenna in crowded area

First, no, I can't move.
Ok, with that out of the way, I live in a mobile home park and
need suggestions for an external AM antenna. I've built a loop, which
works great...except of course, the metal siding of my house offsets
it. And it's cold outside. So no, I'm not going to sit in the yard
:) This isn't so much for DXing as a hobby as it is just being able
to listen to a few 50kW stations within a few hundred miles for
evening enjoyment. While this may not be the most appropriate group

to post to, certainly noboy would know better then the folks here.
Trying first to use the loop, I can put it outside, connect a
wire to one of the leads to the tuning capacitor and have relative
sucess. My problem here of course is that I need to go outside to
tune it, then come inside and tune the radio again...repeating the
process for each station a number of times. Also, I'm worried that it
would interest neighbor kids too much, so it must come in each night
before I go to bed.
My next attempt was a suggestion by a friend of a single wire of
about 70 feet. I ran it out the window and lengthways with the house,
suspended about 8 feet off the ground. As of now, it's close to the
house and I'm sure that again the house is presenting problems - it is
very directional (working only for stations on the open side) While
this provided me a good amount of success, I'm hoping for suggestions
that would be even better.
I have a decent sized yard and one open side - to the street.
There are no above ground power lines in the area. As for having
external wires, if I put them up so they are straight and a 'clean'
look, my neighbors won't complain. However, I would prefer to put
anything on the side opposite the house - which is less open, but also
less visable to otheres.
To simplify things, I drew up a quick layout of my house and it's
relationship to surrounding buildings. Not wanting to post anything
binary to this group, I have placed the image in my web account. Just
point directly to:
http://members.tripod.com/~placidpup/myplace.gif
If you would, please take a look and then describe what you would
do if you were in my situation. Feel free to edit the image with your
ideas and mail the edited version back to me. PLEASE do not post an
edited version back to this group.
Any and all suggestions are welcome, ones applied specificly to
the layout of my home are even more prefferable.
Thanks,
Shane McCarthy
mccarthy@kearney.net

PS. While looking at the image, if you have suggestions for a SW
external antenna please feel free to include those too. I bought a
DX-390 awhile back, but a friend is still fixing it, so I'm still
listening to AM. Thanks again.

From: slay@netcom.com (Sandy Lynch)
Subject: QSL info for VK9XL 03/96

Sorry to say ... don't think you'll have much luck getting a QSL
for a few reasons:

1) Although UA0ZDA apparently used Stan/W7NI's address for the
purpose of obtaining an FCC issued callsign, Stan told fellow
members of the local DX Club here that he was NOT handling
QSL manager duties and had NOT been asked to do so. I heard
this directly from Stan ...

2) VK9XL operated from a number of interesting VK and VK9 locations
although it is now thought, by some, that he was actually
maritime mobile at the time. This was suggested because he
was supposedly operating from...Cocos Keeling, I think.... yet
another DXpedition was on the island at the same time and
VK9XL (apparently) refused to meet them ... the thought is that
he was probably maritime mobile at that time as well.

I don't know if the allegation that VK9XL was maritime mobile or
not was ever proven ... I also do not know if his operations were
ever qualified by the DXCC desk at ARRL or not. You can always ask
them directly and I'm sure they'll advise.

From: Bob <cqbdiaz@pacbell.net>
Subject: What's 10M like under less than ideal conditions ?

I've been hearing a lot of exciting talk on the local 2M repeater about
how
the 10M band is starting to open up. (In one case, a HAM said he could
speak to someone in South America using just 8 watts.)

All of this is very exciting to a new HAM, like me, and I'm working on
learning the code so that I can get onto HF. It seems that we are
entering
a very exciting part of the solar cycle for HF communications; so the
next
few years HF should be really "radio active". <smile>

Still, I can't help but wonder, when HAMs say that the 10M band is
"dead",
what exactly is it like. Clearly, local contacts are possible, but how
far is

"local"? Can one still talk to someone on 10M, say 300 miles away
under
less than ideal band conditions?

I know that this type of question depends on lots of factors, but I was
just
trying to get some sort of general understanding of what the band might
be
like at less than ideal conditions.

73,

Bob KF6JHG

another fine point of QSL'ing
after a major contest-say like ARRL DX or CQ WW:

1. Remember the DX maybe returning from the contest
operation and may not have QSL'ing on his mind for awhile.
2. When the contest operator returns home - that is when
he actually orders his DX QSL - hence if you mail your SASE the
day after the contest, it will sit in a box until the QSL's
arrive from the printer.
3. The contesting DX maybe married with Children. Your QSL's are
sitting in a box in the house remember!
4. Once the QSL's show up from the printer the cards are typically
answered from the top of the box (LAST IN FIRST OUT -> THINK ABOUT IT!)

73 & Happy QSL'ing.....

I think it was VE3BW, and it was definitely a Canadian, but...

Hold your cards. There's a postal strike in progress up there, and
the USPS is returning mail to Canada. (the sticker says if you take
it to a post office, they'll refund your postage. Personally, I wish
they'd just hold it at the P.O. until the strike is over..)

Subject: QSL info for VK9XL 03/96

Anybody have a route for VK9XL for 03/07/96? I worked them
(at least I thought I did ;-) on 40 CW and they were signing
/LH for Lord Howe. So far I've found W7NI for 4/96 and UA0ZDA
for 2/96 through the usual sources. I've sent two cards to W7NI
with no response. Any ideas?

: under
: less than ideal band conditions?

Bob:

With moderate power (100 w) and gain antennas at both ends of the circuit, 150-200 miles isn't out of the question even when ten is dead. Ten may be the best overall DX band we have during solar cycle peaks, but don't write it off at other times. Spradic E (Es) propagation can provide nice single-hop contacts out to about 1200 miles and occasional double-hop to twice that distance (sometimes more). Es peaks EVERY YEAR roughly May through August (plus or minus) and for a few weeks right around Christmas/New Year. But, like the name says, it's sporadic; the band can be open for minutes or hours, and you gotta be there to catch it.

By the way, you'll find the same propagation modes and most of the DX excitement on 6 meters, too. It's just a little bit tougher.

All part of the fun and challenge. Go for it!!

When the flux is high, you can work around the world on 10M with very
little power. When the flux is low, you are lucky if you can get out of
your backyard!

When the sunspot cycle is in the wrong phase, 10 meters is very quiet. Many band openings occur without anyone being aware of it because all think it is dead. South America is available many days when the band is 'dead' but there is nobody there to talk to. That would be what is called Transequadoreal skip and gets even stronger when 10 opens up.
The curse of 10 meters is the low powered rigs most of us use there. Regardless of all the tales about working 10 with 5 watts and a wet noodle for an antenna, the fact is that a good power level and a good antenna will open the band up quite a bit. Od course, there has to be someone else with a like rig on the other end.
300 miles is a bad distance for 10 meters, it's a little out of range for ground wave and a little close for F layer and most Sporadic E conditions. The best bet for 300 miles is backscatter when the F layer is active.
Just wait and see what happens when 10 opens. It's my favorite band.

: under: less than ideal band conditions?

Ten may sound dead but still support openings of a few hundred miles; you may not hear anybody on it but a CQ may still bring a surprising QSO you wouldn't have expected. Still, ground wave on 10 is pretty small, and when it's really dead, it's DEAD.

But, Bob, when it's open, it's pure magic. Around the world on low power--no problem! Good sigs and low noise, with DX just swimming up to the boat.

It's not bad even now, btw. I've got a 10-m rig in the car; worked two new countries on it semi-recently on the way home from work. And the beacon on 28200? I'll tune to that on the drive, to see what's open. I hear the SA beacons (LU, OA, YV) coming in pretty well in North Carolina just about every afternoon.

Good luck! Have fun! 73!

I have a mint condition Yaesu FT-1000D for sale. I am the original owner, non smoker. I have the original manual and carton. If you are looking for the top of the line radio this is it. Job situation forces sale. AES selling this radio for $4400.00. My price is $3300.00. This is a factory D model with all the standard features as Yaesu supplies not an upgraded standard model.

It's good that we're on the upswing of the solar cycle. It sure
provides a lot of motivation for me to get off my -.. ..- ..-. ..-.
and learn the code. <smile>

In truth, I'm almost ready to go and take the 5 WPM code test. If
I pass, that would give me a small slice of 10M. Still, I wish the
code requirement for General would be 9 or 10 WPM, rather than 13.
O-Well, it just means more practice, before I can get a bigger
slice of 10M.

I really enjoy hearing the good news about openings on 10M and
how it going to get better and better over the next few years.

Bob:

The "small slice" you refer to is also where about 75% of all 10m
SSB DX activity takes place.

Go for it, and good luck!

73,

Mark -- WA9ETW

GLOSSARY OF SOLAR-TERRESTRIAL TERMS

A
=

a index. See ak index.

aa index. A daily and half daily index of geomagnetic =

activity determined from the k indexes scaled at two =

nearly antipodal stations at invariant magnetic latitude
50 degrees(Hartland, England, and Canberra, Australia). The =

aa values are in units of 1 nT. The index is available back to 1868, =

and is provided by the Institut de Physique du Globe de Paris, France.

absorption line. In spectroscopy, and in particular =

the solar Fraunhofer spectrum, a characteristic wavelength =

of emitted radiation that is partially absorbed by the medium between =

the source and the observer. (See H alpha.)

active. A descriptive word specifically meaning (1) =
a probability of > or =3D 50% for an M-class x-ray flare =
(see x-ray flare class) in a sunspot region; (2) =
disturbed geomagnetic levels such that 16 < or =3D Ak index < 30.
active dark filament (ADF). A filament displaying motion or =
changes in shape, location, or absorption characteristics. =
active longitude. The approximate center of a range =
of heliographic longitudes in either the northern or southern solar =
hemisphere (seldom both at the same time) containing one or more large =
and complex active regions formed by the frequent, =
localized emergence of new magnetic flux. Individual sunspot groups =
within the complex can have relatively short lifetimes (a week or =
two); the complex may persist for several solar rotations because =
additional spot groups form as earlier ones decay.
active prominence. A prominence moving =
and changing in appearance over a few minutes of time.
active prominence region. A portion of the solar =
limb displaying active prominences; typically associated =
with an active region. =
active region (AR). A localized, transient volume of =
the solar atmosphere in which plages, sunspots, facula, =
flares, etc., may be observed. Active regions are the result =
of enhanced magnetic fields; they are at least bipolar and may =
be complex if the region contains two or more bipolar groups. =
active surge region (ASR). An active region that exhibits a group
or series of spike-like surges that rise no higher than 0.15 solar =
radii above the limb. (See bright surge on the limb.) =
ADF. See active dark filament.
AE index. A geomagnetic index of the auroral electroj, which =
characterizes the maximum range of excursion (both positive =
and negative) from quiet levels; measured at a given =

universal time by using the combined data from a worldwide ring of =

high-latitude magnetic observatories. AU (A upper) refers to =

the greatest positive deviation from the quiet time reference and =

AL (A lower) to the most negative. By definition AE =3D AU - AL. AO =

refers to the mean of AU and AL: AO =3D 1/2 (AU + AL). The AE and compan=
ion =

indexes are provided by the Data Analysis Center for Geomagnetism =

and Spacemagnetism of Kyoto University, Kyoto, Japan.

AFR. The Ak index observed at Fredericksburg, Virginia. =

AFS. See arch filament system. =

ak index. A 3-hourly "equivalent amplitude" =

index of geomagnetic activity for a specific station =

or network of stations (represented generically here by k) expressing =

the range of disturbance in the horizontal magnetic field. "ak" =

is scaled from the 3-hourly K index according =

to the following table:

```
_____________________________________________________
K 0 1 2 3 4 5 6 7 8 9
ak 0 3 7 15 27 48 80 140 240 400
_____________________________________________________
```

At SESC these values are used directly for operational purposes. But =

to convert the ak values to nanoteslas (nT), a local (station-dependent)=
=

conversion factor must be found by dividing the station's lower limit =

for K=3D9 by 250. For example, at Boulder and Fredericksburg the lower =

limit for K=3D9 is 500 nT so the factor is 2; therefore the ak values =

for these stations are in units of 2 nT. (To obtain an equivalent =

amplitude in nanoteslas for Boulder or Fredericksburg, the index value =

must be doubled).

Ak index. A daily index of geomagnetic activity for a specific =

station or network of stations (represented generically here by k) =

derived as the average of the eight 3-hourly ak indexes =

in a Universal Time day. =

Alfven wave. A transverse wave in magnetized plasma
characterized by a change of direction of the magnetic field =

(rather than a change of intensity). =

am index. A mean, 3-hourly "equivalent amplitude" of geomagnetic =

activity based on standardized K index data from a global network =

of 23 Northern and Southern Hemisphere stations by the Institut de =

Physique du Globe de Paris, France; am values are given in units of 1 nT=
=2E =

Am index. The daily Ak index determined from the eight daily =

am indexes. =

An index. The daily Ak index determined from only the Northern =

Hemisphere stations of the am index network.

anomaly. In typical SESC use, an unexpected response =

of a spacecraft.

ap index. A mean, 3-hourly "equivalent amplitude" =

of magnetic activity based on K index data from a planetary =

network of 11 Northern and 2 Southern Hemisphere magnetic observatories =

between the geomagnetic latitudes of 46 degrees and 63 degrees
by the Institut fur Geophysik at Gottingen, F.R. Germany; ap values =

=

Ap index. Formally the daily Ak index, determined from the eight daily =

ap indexes. However, for daily operational uses (since several weeks are=
=

required to collect the data and calculate the index), Air Force Space =

Forecast Center estimates the value of the Ap index by measuring the =

geomagnetic field in near-real time at several Western Hemisphere =

magnetometer stations and statistically weighting the data to represent =

the Gottingen Ap. The value of this estimated Ap index is reported in =

SESC daily and weekly summaries of geophysical activity.

=

aphelion. That point on the path of a sun-orbiting =

object most distant from the center of the sun. Compare perihelion.

=

apogee. That point on the path of an earth-orbiting satellite most =

distant from the center of the earth. Compare perigee.

APR. See active prominence region. =

AR. See active region.

arcade. A series of magnetic loops, overlying a solar inversion line.

arch filament system (AFS). A system of small, arched linear-absorption =

features connecting bright, compact plage of opposite polarity. =

An AFS is a sign of emerging bipolar magnetic flux and possibly rapid =

or continued growth in an active region. =

As index. The daily Ak index determined from only the Southern =

Hemisphere stations of the am index network.

ASR. See active surge region.

atmospherics. Also known as "sferics," transient =

radio waves produced by naturally occurring electric discharges =

(e.g., lightning) in the earth's atmosphere.

AU. The mean distance between the earth and sun, equal to
214.94 solar radii or 1.496E+11m.

aurora. A sporadic, faint visual phenomenon associated with =

geomagnetic activity that occurs mainly in the high-latitude =

night sky. Auroras occur within a band of latitudes known as =

the auroral oval, the location of which is dependent on =

geomagnetic activity. Auroras are a result of collisions between =

atmospheric gases and precipitating charged particles (mostly
electrons) guided by the geomagnetic field from the magnetotail. =

Each gas (oxygen and nitrogen molecules and atoms) gives out its =

own particular color when bombarded, and atmospheric composition =

varies with altitude. Since the faster precipitating particles =

penetrate deeper, certain auroral colors originate preferentially
from certain heights in the sky. The auroral altitude range is 80 =

to 1000 km, but typical auroras are 100 to 250 km above the ground; =

the color of the typical aurora is yellow-green, from a specific =

transition of atomic oxygen. Auroral light from lower levels in the =
atmosphere is dominated by blue and red bands from molecular nitrogen =
and molecular oxygen. Above 250 km, auroral light is characterized =
by a red spectral line of atomic oxygen. To an observer on the ground, =
the combined light of these three fluctuating, primary colors produces =
an extraordinary visual display. Auroras in the Northern Hemisphere =
are called the aurora borealis or "northern lights." Auroras in =
the Southern Hemisphere are called aurora australis. The patterns =
and forms of the aurora include quiescent arcs, rapidly moving rays =
and curtains, patches, and veils.

auroral electrojet. See electrojet. =

auroral oval. An elliptical band around each geomagnetic =
pole ranging from about 75 degrees magnetic latitude at local =
noon to about 67 degrees magnetic latitude at midnight under =
average conditions. It is the locus of those locations of the maximum =
occurrence of auroras and widens to both higher and =
lower latitudes during the expansion phase of a magnetic substorm.
=

autumnal equinox. The equinox that occurs in September. Compare =
vernal equinox. =

B

B-angle. As viewed from the earth, the heliographic latitude of the =
center of the solar disk. The center of the solar disk usually does =
not coincide with the heliographic equator, due to a tilt of the =
solar axis with respect to the ecliptic. (See Bo under solar coordinates=
).
=

Bartels' rotation number. The serial number assigned =
to 27-day rotation periods of solar and geophysical parameters. =
Rotation 1 in this sequence was assigned arbitrarily by Bartels to =
begin in January 1833, and the count has continued by 27-day =

intervals to the present. (For example, rotation 2000 began on 12 =
November 1979, rotation 2030 on 30 January 1982.) The 27-day =
period was selected empirically from the observed recurrence of geo-
magnetic activity attributed to co-rotating features on the sun. =
The sun has an average rotation period (as seen from the earth) of =
27.27 days; therefore, solar longitude slowly drifts with respect =
to the Bartels rate. Compare Carrington longitude.

bipolar magnetic region (bmr). A region of the solar =
photosphere containing at least two areas of enhanced magnetic =
fields of opposing polarity.

birefringent filter. An optical device that passes =
a narrow range of wavelengths near a selected optical wavelength. =
Used especially in solar telescopes to pass selected lines (usually =
H alpha) in the Fraunhofer spectrum.

bow shock. A collisionless shock wave in front of the =
magnetosphere arising from the interaction of the supersonic =
solar wind with the earth's magnetic field. =

bright point. A short-lived brightening of flare intensity, less than =
ten millionths of the solar hemisphere in area. =

bright surge on the disk (BSD). A bright (high temperature) =
stream of gas (surge) seen against the solar disk. BSDs are often =
flare related and commonly fan out from the flare site. See also =
bright surge on the limb, and dark surge on the disk.

bright surge on the limb (BSL). A bright stream of =
gas (surge) emanating from the chromosphere that moves =
outward more than 0.15 solar radius above the limb. It may =
decelerate and return to the sun. Most BSLs assume a linear =
radial shape but can be inclined and/or fan shaped because they =
apparently follow magnetic lines of force. =

brightness temperature. The equivalent blackbody temperature =
at a specified wavelength of a uniform source filling the resolution =

element of the telescope.

BSD. See bright surge on the disk.

BSL. See bright surge on the limb.

burst. A transient enhancement of the solar radio =

emission, usually associated with an active region or flare. =

butterfly diagram. A plot of observed solar active =

region latitudes vs. time. This diagram, which resembles a butterfly, =

shows that the average latitude of active region formation drifts =

from high to low latitudes during a sunspot cycle. =

C

C index. A subjective daily character figure (index) =

of geomagnetic activity for a single observatory; for =

each UTC day the figure is 0 for very quiet magnetic =

conditions, 1 for moderately disturbed conditions, and 2 =

for severely disturbed conditions. =

Carrington longitude. A system of fixed solar longitudes =

rotating at a uniform synodic period of 27.2753 days =

(a sidereal period of 25.38 days). Carrington selected the meridian =

that passed through the ascending node of the sun's equator at 1200 =

UTC on 1 January 1854 as the original prime meridian. The daily =

Carrington longitude of the central point of the apparent solar disk
is listed (with other solar coordinates in The Astronomical Almanac
published annually by the U.S. Naval Observatory. Compare Bartels' =

rotation number.

Castelli U. See U burst.

celestial equator. The projection of earth's geographic =

equator onto the celestial sphere.

celestial sphere. An imaginary spherical shell around =

the earth and concentric with it. =

centimeter burst. A solar radio burst in the centimeter =

wavelength range (1 to 10 cm or 0.01 to 0.1 m), or 30 000 to 3000 =

MHz in the frequency range.

central meridian passage (CMP). The rotation of an active region =

or other feature across the longitude meridian that =

passes through the apparent center of the solar disk.

CFI. See comprehensive flare index. =

chromosphere. The layer of the solar atmosphere above =

the photosphere and beneath the transition =

region and the corona. The chromosphere is the =

source of the strongest lines in the solar spectrum, including the =

Balmer alpha line of hydrogen and the H and K lines of calcium, and =

is the source of the red (chromium) color often seen around the rim =

of the moon at total solar eclipses. =

Ci index. The daily international magnetic character =

figure formed by taking the arithmetic mean of the C =

index values from all reporting observatories.

cleft. See cusp.

CMD. Central Meridian Distance. (See solar =

coordinates). =

CME. See coronal mass ejection.

CMP. See central meridian passage. =

comprehensive flare index (CFI). A method of evaluating =

the significance of a complex flare event. The CFI =

=3D A + B + C + D + E. The value of each component is given below; a =

value of zero is assigned if the effect did not occur. The CFI values =

range from 1 to 17 (non-occurrence gives a zero value); values =

>10 indicate flares with unusually strong electromagnetic radiation.

A-Originally the importance of ionizing radiation as indicated =

by the importance of associated SID, scale 1-3; but currently scaled =

from the x-ray flare class, class C being 1, =

class M being 2, and class X being 3.

B-Importance of H alpha flare; =

scale 1-3 (3 includes flare importance classes 3 and 4). =

C-Log of 10.7-cm peak radio flux in units of 10E-22 W/sq m/Hz.

D-Effects associated with the dynamic radio spectrum: Type II =

burst =3D 1, continuum storm =3D 2, Type IV burst =3D 3. =

E-Log of 200-MHz flux in same units as C.

The CFI was devised and documented by Helen Dodson Prince and Ruth =

Hedeman at the McMath-Hulbert Observatory.

conjugate points. Two points on the earth's surface =

at opposite ends of a geomagnetic field line. =

continuum. Optical radiation arising from broadband =

emission from the photosphere. =

continuum storm (CTM). General term for solar noise =

lasting for hours and sometimes days, in which the intensity varies =

smoothly with frequency over a wide range in the meter and decimeter =

wavelengths. =

convection. The bulk transport of plasma (or gas) from one place to anoth=
er, =

in response to mechanical forces (for example, viscous interaction with =
the =

solar wind) or electromagnetic forces. =

Coordinated Universal Time (UTC). By international =

agreement, the local time at the prime meridian, which passes through =

Greenwich, England. It was formerly known as Greenwich Mean Time, =

or sometimes simply Universal Time. There are 24 time zones around =

the world, labeled alphabetically. The time zone centered at Greenwich =

has the double designation of A and Z. Especially in the military =

community, Coordinated Universal Time is often referenced as Z or =

Zulu Time. =

corona. The outermost layer of the solar atmosphere, =

characterized by low densities (<10E+9 per cubic cm or 10E+15 per cubic =
m
and high temperatures (>10E+6 K).

coronagraph. An optical device that makes it possible =

to observe the corona at times other than during an eclipse. =

A simple lens focuses the sun onto an occulting disk that =

prevents the light from the solar disk from proceeding =

farther along the optical path, effectively providing an artificial =

eclipse.

coronal hole. An extended region of the corona, =

exceptionally low in density and associated with unipolar photospheric =

regions having "open" magnetic field topology. Coronal holes are =

largest and most stable at or near the solar poles, and are a source =

of high-speed solar wind. Coronal holes are visible =

in several wavelengths, most notably solar x-ray s, =

but at SESC, coronal holes are determined from solar images in He =

1083 nm provided by the Kitt Peak National Solar Observatory.

coronal loops. A typical structure of enhanced corona
observed in EUV lines and soft x-rays. They are sometimes related to =

H alpha loops. Coronal loops represent "closed" magnetic topology. =

coronal mass ejection (CME). A transient outflow of =

plasma from or through the solar corona. CMEs are often =

but not always associated with erupting prominences, =

disappearing solar filaments, and flares. =

coronal rain (CRN). Material condensing in the corona
and appearing to rain down into the chromosphere =

as observed in H alpha at the solar limb =

above strong sunspots. =

coronal streamer. A large-scale structure in =

the white-light corona often overlying a principal =

inversion line in the solar photospheric magnetic fields. =

(See helmet streamer).

coronal transients. A general term for short-time-scale changes in the co=
rona. =

corrected geomagnetic coordinates. A nonspherical coordinate =

system based on a magnetic dipole axis that is offset from the earth's =
center by about 450 km toward a location in the Pacific Ocean =
(15.6 N 150.9 E). This "eccentric dipole" axis intersects the surface at=
=
81N 85 W, and 75 S 120 E.
cosmic noise. The broad spectrum of radio noise arriving =
at the earth from sources outside the solar system. =
cosmic ray. An extremely energetic (relativistic) charged =
particle primarily originating outside the earth's magnetosphere.
=
Cp index. A daily index of geomagnetic activity =
analogous to the Ci index, obtained from the sum of =
the eight daily values of the ap index. The range of =
Cp is 0.0 to 2.5, 2.5 representing the most disturbed. =
critical frequency. In ionospheric radio propagation, =
that frequency capable of penetration just to the layer of maximum =
ionization with vertical propagation. Radiowaves of lower frequencies =
are refracted back to the ground; higher frequencies pass through.
CRN. See coronal rain.
crochet. A sudden deviation in the sunlit geomagnetic =
field H component (see geomagnetic elements) associated =
with extraordinary solar flare x-ray emission. =
The effect can be as much as 50 nT and last up to 30 minutes. The =
event is also known as an SFE (solar flare effect). =
CTM. See continuum storm. =
cusp(s). In the magnetosphere, two regions =
near magnetic local noon and approximately 15 degrees of latitude =
equatorward of the north and the south magnetic poles. The cusps mark =
the division between geomagnetic field lines on the sunward side =
(which are approximately dipolar but somewhat compressed =
by the solar wind) and the field lines in the polar =

cap that are swept back into the magnetotail by the =

solar wind. The term cusp implies conical symmetry around the axis =

of the bundle of converging (Northern Hemisphere) or diverging (Southern=
=

Hemisphere) field lines. In practice, "cusp" and "cleft" are =

often used interchangeably. However, "cleft" implies greater extension =

in longitude (local time) and hence a wedge-shaped structure. =

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

D

=

D component of the geomagnetic field. See geomagnetic =

elements. =

D region. A daytime region of the earth's ionosphere
beginning at approximately 40 km, to 90 km altitude. =

Radiowave absorption in layers in this region can be significantly =

increased in response to increased ionization associated with solar =

activity. =

dark surge on the disk (DSD). Dark gaseous ejections =

on the sun visible in H alpha. They usually originate =

from small subflare-like brightenings. Material is usually seen =

to be ejected, to decelerate at a gravitational rate, and to flow =

back to the point of origin. DSDs can occur intermittently for days =

from an active region. =

dB (decibel). A unit used to express the ratio between two levels
of power. By definition dB =3D 10 log (P2/P1). (Doubling the power
ration is approx an increase of 3 dB). =

DB. disparition brusque. See disappearing =

solar filament.

declination. (1) The angular distance of an astronomical =

body north (+) or south (-) of the celestial equator. =

(2) In geomagnetic applications, the angle between true north and =

the horizontal component of the local geomagnetic field. =

differential charging. The charging of different areas =

of a spacecraft or satellite to different potentials in response to =

sunlight, the charged particle environment, and the design and compositi=
on =

of the structural materials themselves. Discharge may occur through =

arcing and generally is detrimental.

differential particle flux. The differential particle =

directional flux j (E,w) denotes the =

number of particles of energy E per unit energy interval, =

per unit area, per unit time, per unit solid angle of observation, =

passing through an area perpendicular to the viewing direction; the =

angle w is the angle between the viewing direction =

and the local magnetic field. It is approximately obtained from the =

count rate of a physical detector measuring the flux =

of particles between energy E and E +dE, geometric factor =

G, and solid angle of view dW through the relationship

j(E,w) =3D C/(G * dE * dW * dt)

where C is the number of detector counts in time dt.

differential rotation. The change in solar rotation rate with latitude. =

Low latitudes rotate at a faster angular rate (approx. 14 degrees/day) t=
han =

do high latitudes (approx. 12 degrees/day). =

dip. The geomagnetic inclination angle. See =

geomagnetic elements.

dip equator. An irregular, imaginary line around the earth where the =

geomagnetic inclination angle is measured to be zero. =

It lies near the geographic equator. =

disappearing solar filament (DSF). A solar filament =

(prominence) that disappears suddenly (on a time scale of minutes =

to hours). The prominence material is often seen to ascend but is =

also seen to fall into the sun or just fade. (Historically, DSFs have =

been called disparitions brusques because they were first studied =
by French astronomers.) DSFs are a possible indicator of coronal =
mass ejections.

disk. The visible surface of the sun (or any heavenly =
body) projected against the sky.

disparition brusque (DB). See disappearing solar filament. =

Doppler shift. A change in the perceived frequency =
of a radiated signal caused by motion of the source relative to the =
observer.

dose rate. The rate at which radiation energy is absorbed =
in living tissue, expressed in centisieverts per unit time. =

DSD. See dark surge on the disk.

DSF. See disappearing solar filament.

Dst index. A measure of variation in the geomagnetic =
field due to the equatorial ring current. It is =
computed from the H-components at approximately four near-equatorial =
stations at hourly intervals. At a given time, the Dst index is =
the average of variation over all longitudes; the reference level =
is set so that Dst is statistically zero on internationally designated =
quiet days. An index of -50 or deeper indicates a storm-level =
disturbance, and an index of -200 or deeper is associated with middle-
latitude auroras. Dst is determined by the World Data =
Center C2 for Geomagnetism, Kyoto University, Kyoto, Japan. =

E
=

E region. A daytime region of the earth's ionosphere
roughly between the altitudes of 90 and 160 km. E region characteristics=
=
(electron density, height, etc.) depend on the solar zenith angle =
and solar activity. The ionization in the E layer is caused mainly =
by x-ray s in the range 0.8 to 10.4 nm. (See also sporadic E).

eccentric dipole. See corrected geomagnetic coordinates.

eclipse. The obscuring of one celestial body by another. =

(1) A Solar Eclipse occurs when the moon comes between the earth and =

the sun. In a total eclipse, the solar disk is completely obscured; in a=
=

partial eclipse the solar disk is only partly obscured. An annular eclip=
se =

occurs when the moon is near its apogee and the apparent diameter of the=
=

moon is less than that of the sun so that the sun is never completely =

obscured. "First and last contacts" are defined as the times of =

tangency of the solar and lunar disks. A central eclipse =

(which can be total or annular) has two additional times of tangency: =

"second contact," when maximum eclipse begins, and "third =

contact," when it ends. The last glimpses of the sun through the lunar =

valleys, just before second contact, are known as Baily's =

beads. (2) A lunar eclipse occurs when the moon =

enters the shadow cast by the earth. (3) Spacecraft in the earth's =

shadow are said to be in eclipse. =

ecliptic. The great circle made by the intersection =

of the plane of the earth's orbit with the celestial sphere. =

(Less properly, the apparent path of the sun around the sky during =

the year.) =

EFR. See emerging flux region.

EHF. See extremely high frequency.

electrojet. (1) Auroral: A current that flows in the =

ionosphere in the auroral zone. (2) Equatorial: A thin electric =

current layer in the ionosphere over the dip equator =

at about 100 to 115 km altitude.

electrostatic discharge (ESD). An abrupt equalization =

of electric potentials. In space, ESD can occur between objects or =

portions of a single object (see differential charging); =

ESD may occur locally within a dielectric or cable. The consequences =

may include material damage, a spacecraft anomaly, phantom =

command s, disrupted telemetry, and contaminated data. =

ELF. See extremely low frequency. =

emerging flux region (EFR). An area on the =

sun where new magnetic flux is erupting. An EFR is a bipolar =

magnetic region that first produces a small bipolar plage =

visible in the chromosphere, which may develop an arch =

filament system and the initial spots of a sunspot group. =

An EFR may be isolated from other solar activity or may occur =

within an active region. =

emission line. In spectroscopy, a particular wavelength =

of emitted radiation, more intense than the background continuum.

emission measure. The integral of the square of the =

electron density over volume; the units are inverse volume (per cubic m)=
=2E

ephemeris. An astronomical almanac listing solar =

coordinates and the positions of the sun and other heavenly bodies =

at regular intervals in time. =

EPL. See eruptive prominence on limb.

equatorial electrojet. See electrojet. =

equinox. One of the two points of intersection of the =

celestial equator and the ecliptic. The sun passes =

through the vernal equinox on about 21 March and through =

the autumnal equinox on about 22 September. =

eruptive. With regard to solar flare =

predictions, a probability of >50% that an active region will produce =

C class x-ray flares. (See x-ray flare class.)

eruptive prominence on limb (EPL). A solar prominence
that becomes activated and is seen to ascend from the sun; sometimes =

associated with a coronal mass ejection. (See also disappearing =

solar filament).

ESD. See electrostatic discharge.

estimated hemispherical power input. For the earth, =

an estimate made from NOAA/TIROS particle measurements of the =

instantaneous power dissipated daily in a single auroral zone by =

auroral particle precipitation. The power ranges from approximately =

5 gigawatts during quiet intervals up to more than 100 in very active =

times. The magnitude of this power input corresponds closely to the =

level of geomagnetic activity.

EUV. See extreme ultraviolet.

Evershed effect. Horizontal motion of the solar atmosphere =

near a sunspot, having velocities of a few kilometers =

per second. In the photosphere, matter streams away =

from the umbra. In the chromosphere, the direction of =

flow is toward the umbra. =

exosphere. The earth's atmosphere above 500-600 km. =

expert system. A computer program intended to simulate =

human logic for analyzing a complex situation on the basis of a sequence=
=

of behavior rules supplied by a human expert. (See Theophrastus).

extraordinary mode. One of the two modes of propagation =

of electromagnetic waves in a magnetic plasma. For =

propagation along the direction of the magnetic field, it is the mode =

in which the electric vector rotates in the same sense that an electron =

gyrates freely about the field. For propagation perpendicular to =

the magnetic field, the electric vector oscillates perpendicular to =

the primary magnetic field. (See also ordinary mode.)

extreme ultraviolet (EUV). A portion of the electromagnetic =

spectrum from approximately 10 to 100 nm.

extremely high frequency (EHF). That portion of the =

radio frequency spectrum from 30-300 GHz. =

extremely low frequency (ELF). That portion of the =

radio frequency spectrum from 30 to 3000 Hz. =

F

F corona. Of the white-light corona (the =

corona seen by the eye at a total solar eclipse), that =

portion which is caused by sunlight scattered or reflected by solid =

particles (dust) in interplanetary space. The same phenomenon produces =

zodiacal light. =

F region. The upper region of the ionosphere, =

above approximately 160 km altitude. F region electron densities are =

highly variable, depending on the local time, solar activity, season, =

and geomagnetic activity. The F region contains the =

F1 and F2 layers. The F2 layer is more dense and peaks at altitudes =

between 200 and 600 km. The F1 layer, which forms at lower altitudes =

in the daytime, has a smaller peak in electron density.

f-spot. See follower spot. =

facula. White-light plage-a =

bright region of the photosphere seen in white light, =

seldom visible except near the solar limb. Corresponds =

with concentrated magnetic fields that may presage sunspot =

formation.

fibril. A linear feature in the H alpha =

chromosphere of the sun, occurring near strong sunspots =

and plage or in filament channels. Fibrils =

parallel strong magnetic fields, as if mapping the field direction.

filament. A mass of gas suspended over the chromosphere =

by magnetic fields and seen as dark ribbons threaded over the =

solar disk. A filament on the limb of the sun seen in emission =

against the dark sky is called a prominence. Filaments occur =

directly over magnetic-polarity inversion lines, unless they are active.=
=

filament channel. A broad pattern of fibrils in the chromosphere, =

marking a portion of a magnetic polarity inversion line where a filament=
=

may soon form or where a filament recently disappeared. Filament channel=
s =

interconnect separate filaments and active regions =

on a common inversion line. =

flare. A sudden eruption of energy in the solar atmosphere =

lasting minutes to hours, from which radiation and particles are emitted=
=2E =

Flares are classified on the basis of area at the time of maximum =

brightness in H alpha.

Importance 0 (Subflare): < =3D 2.0 hemispheric square degrees
Importance 1: 2.1-5.1 square degrees =

Importance 2: 5.2-12.4 square degrees =

Importance 3: 12.5-24.7 square degrees =

Importance 4: > =3D 24.8 square degrees
[One square degree is equal to (1.214 x 10E+4 km)squared =3D 48.5 =

millionths of the visible solar hemisphere.] A brightness =

qualifier F, N, or B is generally appended to the importance character =

to indicate faint, normal, or brilliant (for example, 2B). =

fluence. Time integrated flux. In SESC =

use, a specified particle flux accumulated over 24 hours.

flux. The rate of flow of a physical quantity through =

a reference surface.

fmin. The lowest frequency at which echo traces are =

observed on an ionogram. It increases with increasing =

D region absorption.

foEs. The maximum ordinary mode radiowave =

frequency capable of vertical reflection from the sporadic =

E layer of the ionosphere.
=

foF2. The maximum ordinary mode radiowave =

frequency capable of vertical reflection from the F2 layer of the =

ionosphere. (See F region.) =

follower spot. In a magnetically bipolar or multipolar =

sunspot group, the main spot in that portion of the group east =

of the principal inversion line is called the follower =

or f-spot. Leader and follower describe the positions of spots =

with respect to apparent motion due to solar rotation. (Compare leader =

spot.) =

Forbush decrease. An abrupt decrease, of at least 10%, =

of the background galactic cosmic ray intensity as =

observed by neutron monitors. It is associated with major plasma =

and magnetic field enhancements in the solar wind =

at or beyond the earth.

Fraunhofer spectrum. The system of dark lines superposed =

on the continuous solar spectrum formed by the absorption of photons =

by atoms and molecules in the solar and terrestrial atmospheres.

=2E

GLOSSARY OF SOLAR-TERRESTRIAL TERMS

G

gamma rays. High-energy radiation (energies in =

excess of 100 keV) observed during large, extremely energetic solar =

flares.

GEOALERT. An IUWDS special message summarizing by code =

the current and predicted levels of solar activity =

and geomagnetic activity. =

geocorona. The outer region of the earth's atmosphere =

lying above the thermosphere and composed mostly of hydrogen.

geomagnetic activity. Natural variations in the geomagnetic =

field classified quantitatively into quiet, =

unsettled, active, and geomagnetic storm levels =

according to the observed a index:

Category Range of index

quiet 0 - 7 =

unsettled 8 - 15 =

active 16 - 29 =

minor storm 30 - 49 =

major storm 50 - 99 =

severe storm 100 - 400 =

geomagnetic elements. The components of the geomagnetic =

field at the surface of the earth. These elements are usually =

denoted thus in the literature:

X-the geographic northward component =

Y-the geographic eastward component =

Z-the vertical component, reckoned positive downward =

H-the horizontal intensity, of magnitude sq rt((X)squared + (Y)squared)=

F-the total intensity sq rt((H)squared + (Z)squared)
I-the inclination (or dip) angle, arctan (Z/H)
D-the declination angle, measured from the geographic north
direction to the H component direction, positive in an eastward =

direction.
D =3D arctan (Y/X)

However, in SESC use, the geomagnetic northward and geomagnetic =

eastward components are called the H and D components. The H axis =

direction is defined by the mean direction of the horizontal component =

of the field; the D component is expressed in nanoteslas and is related=
=

to the direction of the horizontal component relative to geomagnetic =

north by using the small-angle approximation. Thus the D component =

=3D H (the horizontal intensity) multiplied by delta D (the =

declination angle relative to geomagnetic north, expressed in radians).=
=

geomagnetic field. The magnetic field in and around =

the earth. The intensity of the magnetic field at the earth's surface =

is approximately 32,.000 nT at the equator and 62,000 nT =

at the north pole (the place where a compass needle points vertically =

downward). The geomagnetic field is dynamic and undergoes continual =

slow secular changes as well as short-term disturbances (see geomagneti=
c =

activity). The geomagnetic field can be approximated =

by a centered dipole field, with the axis of the dipole inclined to =

the earth's rotational axis by about 11.5 degrees. Geomagnetic =

dipole north is near geographic coordinate 78.3 N 69 W (Thule, Greenlan=
d), =

and dipole south is near 79 S 110 E (near Vostok, Antarctica). The obse=
rved =

or dip poles, where the magnetic field is vertical to the earth's surfa=
ce, =

are near 76 N 101 W, and 66 S 141 E. The adopted origin of geomagnetic=
=

longitude is the meridian passing through the geomagnetic poles =

(dipole model) and the geographic south pole. (See also corrected =

geomagnetic coordinates.)

geomagnetic storm. A worldwide disturbance of the earth's =

magnetic field, distinct from regular diurnal variations. A storm =

is precisely defined as occurring when the daily Ap index exceeds =

29. (See geomagnetic activity).

Initial Phase: Of a geomagnetic storm, that period when there may =

be an increase of the middle-latitude horizontal =

intensity (H) (see geomagnetic elements) at the surface =

of the earth. The initial phase can last for hours (up to a day), =

but some storms proceed directly into the main phase without showing =

an initial phase.

Main Phase: Of a geomagnetic storm, that period when the horizontal =

magnetic field at middle latitudes is generally decreasing, owing =

to the effects of an increasing westward-flowing magnetospheric =

ring current. The northward component can be depressed as much =

as several hundred nanoteslas in intense storms. The main phase can =

last for hours, but typically lasts less than 1 day. =

Recovery Phase: Of a geomagnetic storm, that period when the depressed =

northward field component returns to normal levels. Recovery is typical=
ly =

complete in one to two days, but can take longer. =

geomagnetic time. See magnetic local time. =

geosynchronous. Term applied to any equatorial satellite =

with an orbital velocity equal to the rotational velocity of the earth.=
=

The geosynchronous altitude is near 6.6 earth radii (approximately =

36 000 km above the earth's surface). To be geostationary as well, =

the satellite must satisfy the additional restriction that its orbital =

inclination be exactly zero degrees. The net effect is that a geostatio=
nary =

satellite is virtually motionless with respect to an observer on the =

ground.

GLE. See ground-level event. =

GMT. Greenwich Mean Time. (See Coordinated =

Universal Time.) =

GPS. Global Positioning System: a network of earth-orbiting =

satellites used for precise position-finding in surveying =

and navigation.

gradual commencement. The commencement of a geomagnetic =

storm that has no well-defined onset. (See also sudden =

commencement.)

granulation. Cellular structure of the photosphere
visible at high spatial resolution. Individual granules, which =

represent the tops of small convection cells, are 200 to 2000 km in =

diameter and have lifetimes of 8 to 10 minutes.

Greenwich Mean Time (GMT). See Coordinated =

Universal Time. =

green line. A coronal emission line =

at 530.3 nm from Fe XIV (an iron atom from which 13 electrons have =

been stripped). The green line is one of the strongest (and first-recog=
nized) =

visible coronal lines. It identifies moderate-temperature =

regions of the corona ; it is enhanced in coronal =

streamers above inversion lines, and diminished =

in coronal holes. =

ground-level event (GLE). A sharp increase in =

ground-level cosmic ray count to at least 10% =

above background, associated with solar protons of energies greater =

than 500 MeV. GLEs are relatively rare, occurring only a few times =

each solar cycle. When they occur, GLEs begin a few =

minutes after flare maximum and last for a few tens =

of minutes to hours. Intense particle fluxes at lower =

energies can be expected to follow this initial burst of relativistic =

particles. GLEs are detected by neutron monitors, e.g., the monitor =

at Thule, Greenland. =

=

H

=

H component (of the geomagnetic field). See geomagnetic elements.

H alpha. The first atomic transition =

in the hydrogen Balmer series; wavelength =3D 656.3 nm. This absorption=
=

line of neutral hydrogen falls in the red part of the visible =

spectrum and is convenient for solar observations. The H alpha =

line is universally used for patrol observations of solar flare s, =

filaments, prominence s, and the fine structure of active regions.

Hale boundary. A large-scale magnetic inversion =

line of a particular magnetic orientation in the solar photosphere =

or across a sector boundary in the solar =

wind. If the polarity of the western (leading) side of the boundary =

is the same as that of the nearer solar pole at the start of a sunspot =
cycle, the boundary is said to be "Hale." If the polarity =
is opposite, the boundary is "anti-Hale." At the beginning =
of Cycle 22 (1987), the northern solar pole was negative; therefore =
in the northern hemisphere a Hale boundary separates a leading negative=
=
polarity region from a following positive one. The boundary between =
the leader spot and follower spot of =
a typical sunspot group in either hemisphere is a Hale boundary. =
heliographic. Referring to coordinates on the solar =
surface referenced to the solar rotational axis.
heliopause. The boundary surface between the solar =
wind and the external galactic medium.
heliosphere. The magnetic cavity surrounding the sun, =
carved out of the galaxy by the solar wind. =
helmet streamer. A feature of the white light corona =
(seen in eclipse or with a coronagraph) that looks like =
a ray extending away from the sun out to about 1 solar radius, =
having an arch-like base containing a cavity usually occupied =
by a prominence.
hemispherical power input (HPI). See estimated =
hemispherical power input. =
HF. See high frequency.
high frequency (HF). That portion of the radio frequency =
spectrum between 3 and 30 MHz. =
high latitude. With reference to zones of geomagnetic =
activity, 50 degrees to 80 degrees geomagnetic latitude. =
The other zones are equatorial, polar, and middle latitude. =
high-speed stream. A feature of the solar wind having velocities =
exceeding approximately 600 km/s (about double average =
solar wind values). High-speed streams that originate =

in coronal hole s are less dense than those originating =

in the average solar wind.

homologous flares. Solar flares that occur repetitively in an =

active region, with essentially the same position and with a =

common pattern of development.

Hyder flare. A filament -associated two-ribbon flare, =

often occurring in spotless regions. The flare is generally slow =

(30-60 minutes rise time in H alpha and x-ray) and follows the =

disappearance of a quiescent filament. The flare presumably results =

from the impact on the chromosphere of infalling filament =

material. The Hyder flare is named for Dr. C. Hyder, who published =

studies of such flares in 1967. =

I

IMF. See interplanetary magnetic field. =

inclination of the geomagnetic field. The angle between =

the local geomagnetic field direction and the horizon. =

(See geomagnetic elements.)

initial phase. See geomagnetic storm.

integral particle flux. The integral directional particle =

flux J(E,w) is literally the mathematical integral, with respect to t=
he =

energy E, of the differential particle flux j (E,w). It denotes =

the number of particles of energy equal to or greater than E, =

per unit area, per unit solid angle, per unit time, passing =

through an area perpendicular to the viewing direction. =

interplanetary magnetic field (IMF). The magnetic field =

carried with the solar wind.

INTERMAGNET. An international consortium or magnetic
observatories that exchange data in near-real time by satellite relay. =

invariant magnetic latitude. The geomagnetic latitude at which a partic=
ular =

line of force of the geomagnetic field, characterized by L (the altitud=
e =

of the field line at the equator), intersects the earth. The relationsh=
ip =

is given by L (cos)squared =3D 1 L is expressed in earth radii and the =

geomagnetic field is approximated by a dipole model.

inversion line. The locus of points on the solar surface =

where the radial magnetic field vanishes. Inversion lines separate =

regions of opposing polarity and are often superposed by thin, dark =

filaments, which can be used as tracers. Inside active =

regions, the areas close to and along inversion lines are preferred =

places of flare occurrence. Filament channels, plage corridors, =

arch-filament systems, and fibril patterns surrounding active regions c=
an =

be used to infer the positions of inversion lines.

ion-acoustic waves. Longitudinal waves in a plasma similar to sound =

waves in a neutral gas. Amplitudes of electron and ion oscillations are=
=

not quite the same, and the resulting Coulomb =

repulsion provides the potential energy to drive the waves.

ionogram. A plot (record) of the group path height =

of reflection of ionospherically returned (echoed) radio waves as =

a function of frequency.

ionosphere. The region of the earth's upper atmosphere =

containing free electrons and ions produced by ionization of the consti=
tuents =

of the atmosphere by solar ultraviolet radiation at very short waveleng=
ths =

(<100 nm) and energetic precipitating particles. The ionosphere influen=
ces =

radiowave propagation of frequencies less than about 300 MHz. (See D =

region, E region, F region.) =

ionospheric storm. A disturbance in the F region of the ionosphere, =

which occurs in connection with geomagnetic activity. In general, there=
=

are two phases of an ionospheric storm, an initial increase in electron=
density =

(the positive phase) lasting a few hours, followed by a decrease lastin=
g =

a few days. At low latitudes only the positive phase is usually seen. =

Individual storms can vary, and their behavior depends on geomagnetic =

latitude, season, and local time. The phases of an ionospheric storm =

are not related to the initial and main phases of a geomagnetic =

storm. =

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

J

None

K

K (kelvin). A unit of absolute temperature. One kelvin is equal
to 1 degree C, but zero on the kelvin scale corresponds to absolute
zero (-273.15 degrees C).

K corona. Of the white-light corona
(that is, the corona seen by the eye at a total solar eclipse), that
portion which is caused by sunlight scattered by electrons in the
hot outer atmosphere of the sun. This is the "true" corona. Corona
graphs are specifically constructed to separate the K corona from
the F corona.

K index. A 3-hourly quasi-logarithmic local
index of geomagnetic activity relative to an assumed quiet-day
curve for the recording site. Range is from 0 to 9. The K index measure=
s
the deviation of the most disturbed horizontal component (see geomagnet=
ic
elements).

Kelvin-Helmholtz instability. A mechanism often
invoked to explain phenomena at the magnetopause (and
sometimes the plasmapause), especially the observed
magnetic pulsations.

Km index. A 3-hourly planetary index of geomagnetic
activity calculated by the Institut de Physique du Globe
de Paris, France, from the K indexes observed at a
large, symmetrically located network of stations. The

Km indexes are used to determine the am indexes.

Kp index. A 3-hourly planetary index of geomagnetic activity
calculated by the Institut fur Geophysik der Gottingen Universitat,
F.R. Germany, from the K indexes observed at 13 stations primarily
in the Northern Hemisphere. The Kp indexes, which date from 1932,
are used to determine the ap indexes.

L

L. Heliographic longitude of a solar feature. (See solar coordinates.)

latchup. With reference to the effect of energetic
particles on spacecraft microcircuits, a serious type of single
event upset in which the microcircuit is either permanently stuck
or cannot be reset without being turned off and on.

LDE. See long duration (or decay) event.

leader spot. In a magnetically bipolar or multipolar
sunspot group, the main spot in that portion of the group west
of the principal inversion line ; also called the preceding
or p-spot. Leader and follower describe the positions
of spots with respect to apparent motion due to solar rotation. (Compar=
e
follower spot.)

LEO. Among satellite operators, a common abbreviation for Low Earth Orbit=
=2E

LET. See linear energy transfer.

LF. See low frequency.

light bridge. Observed in white light, a bright tongue
or streaks penetrating or crossing sunspot umbra e.
Light bridges typically develop slowly and have lifetimes of several
days. The appearance of a light bridge is frequently a sign of impendin=
g
active region division or dissolution. The more brilliant
forms occur with overlying bright plage and often occur
during the most active phase of the sunspot group.

light curve. A plot of intensity in a particular wavelength
or band of wavelengths against time, especially with reference to
a solar flare; for example, the time history of the x-ray output of a =
flare.

limb. The edge of the solar disk, corresponding
to the level at which the solar atmosphere becomes transparent to
visible light.

limb darkening. For certain solar spectral lines, a
lessening of the intensity of the line from the center of the solar

disk to the limb, caused by the existence of a
temperature gradient in the sun and the line-of-sight
through the solar atmosphere.

limb flare. A flare at the edge (limb) of the solar disk ; the elevated=

portions of the flare are seen with particular clarity against the dark=

sky background.

linear energy transfer (LET). The energy per unit path
length that an ionizing particle loses to the medium through which
it is traveling. The greater the LET, the more damaging the particle.

lobes. In the magnetotail, the two regions (north and south)
separated by the neutral sheet.

long duration (or decay) event (LDE). With reference to x-ray
events, those events that are not impulsive in appearance. The exact
time threshold separating impulsive from long-duration events is not
well defined, but operationally, any event requiring hours (1 or more)
to return to background levels would probably be regarded as an LDE.
It has been shown that the likelihood of a coronal mass ejection
increases with the duration of an x-ray event, and becomes virtually
certain for durations of 6 hours or more.

longitudinal component. That component of magnetic
field vector parallel to the direction of view, radial from the solar
surface at disk center.

loop prominence system (LPS). A system of prominences
in the form of loops associated with major flares, bridging the
magnetic inversion line. The lifetime of an LPS is a few hours.
Loop prominences observed in H alpha are distinctly brighter than
other prominences, and material typically flows downward along
both legs from condensation "knots" near the top of the loop. LPSs
show a high correlation with proton flares.

low frequency (LF). That portion of the radio frequency
spectrum from 30 to 300 kHz.

lowest usable frequency (LUF). The lowest frequency
that allows reliable long-range HF radio communication by
ionospheric refraction.

LPS. See loop prominence system.

LUF. See lowest usable frequency.

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

M

M(3000). The ratio of the maximum frequency reflected
once from an ionospheric layer over a 3000-km range to the
critical frequency of the layer.

magnetic bay. A relatively smooth excursion of the
H (horizontal) component (see geomagnetic elements)
of the geomagnetic field away from and returning to
quiet levels. Bays are "positive" if H increases and "negative"
if H decreases.

magnetic cloud. In general, any identifiable parcel of solar wind.
More specifically, a region of about 0.25 AU in radial dimension in
which the magnetic field strength is high and the direction of one
component of the magnetic field changes appreciably by means of
a rotation nearly parallel to a plane. Magnetic clouds may be one
manifestation of coronal mass ejections in the interplanetary medium.

magnetic local time (MLT). On earth, analogous to geographic
local time; MLT at a given location is determined by the angle subtende=
d
at the geomagnetic axis between the geomagnetic midnight meridian
and the meridian that passes through the location. 15 degrees =3D 1 h.=

The geomagnetic meridian containing the sub-solar point
defines geomagnetic local noon, and the opposite meridian defines
geomagnetic midnight. (See geomagnetic field.)

magnetic sunspot classifications. See Mount Wilson magnetic classificati=
on.

magnetogram. A plot showing the amplitude of one or
more vector components of a magnetic field versus space or time. Solar
magnetograms are a graphic representation of solar magnetic field
strengths and polarity.

magnetohydrodynamics (MHD). The study of the dynamics of an electrically
conducting fluid in the presence of a magnetic field.

magnetopause. The boundary surface between the solar
wind and the magnetosphere, where the pressure
of the magnetic field of the object effectively equals the dynamic
pressure of the solar wind.

magnetopause current sheet. An electric current sheet
that more or less coincides with the magnetopause.

magnetosheath. The region between the bow
shock and the magnetopause, characterized by very
turbulent plasma. For the earth, along the sun-earth
axis, the magnetosheath is about 2 earth radii thick.

magnetosphere. The magnetic cavity surrounding a magnetized
body, carved out of the passing solar wind by virtue
of the magnetic field, which prevents, or at least impedes, the direct
entry of the solar wind plasma into the cavity.

magnetotail. The extension of the magnetosphere in the
antisunward direction as a result of interaction with
the solar wind. In the inner magnetotail, the field
lines maintain a roughly dipolar configuration. But at greater distance=
s
in the antisunward direction, the field lines are stretched into northe=
rn
and southern lobes, separated by a plasmasheet.
There is observational evidence for traces of the earth's magnetotail
as far as 1000 earth radii downstream.

MAGSTORM. A telegraphic abbreviation used to denote
a geomagnetic storm.

main phase. See geomagnetic storm.

Maunder minimum. An approximately 70-year period,
centered near 1670, during which practically no sunspots
were observed.

maximum usable frequency (MUF). The highest frequency
that allows reliable HF radio communication over a given ground range
by ionospheric refraction. Frequencies higher than the MUF penetrate
the ionosphere and become useful for extraterrestrial
communications.

MDP. See mound prominence.

medium frequency (MF). That portion of the radio frequency
spectrum from 0.3 to 3 MHz.

mesosphere. The region of the earth's atmosphere between
the upper limit of the stratosphere (approximately
30 km altitude) and the lower limit of the thermosphere
(approximately 80 km altitude).

MHD. See magnetohydrodynamics.

micropulsation. See pulsation.

microwave burst. A radiowave signal associated with
optical and/or x-ray flare s. Microwave
bursts occur mostly at centimeter wavelengths (6 cm =3D 4995 MHz) but
are generally broadband, often extending into the millimeter and decime=
ter
domains. (See also U - burst.)

microwaves. Generically, any radio frequency of 500 MHz or more.

middle latitude. With reference to zones of geomagnetic activity,
20 degrees to 50 degrees geomagnetic latitude. Other zones
are equatorial, polar, and high latitude.

Moreton wave. A wave disturbance (also known as a flare
blast wave) generated by large flares, which is seen

to propagate horizontally across the disk of the sun
at a typical velocity of about 1000 km /s. Its presence
is more visible in wings of the H alpha line. It can cause
filaments to erupt as the wave apparently disturbs supporting
magnetic fields.

mound prominence (MDP). H alpha structure
at the solar limb that is the elevated top of numerous
small surges and/or a dense, low-lying prominence.

Mount Wilson magnetic classification. Classification
of the magnetic character of sunspot s according to
rules set forth by the Mount Wilson Observatory in California.

alpha. A unipolar sunspot group.
beta. A sunspot group having both positive and
negative magnetic polarities (bipolar), with a simple and distinct
division between the polarities.
gamma. A complex active region
in which the positive and negative polarities are so irregularly dist=
ributed
as to prevent classification as a bipolar group.
beta-gamma. A sunspot group that
is bipolar but which is sufficiently complex that no single, continuo=
us
line can be drawn between spots of opposite polarities.
delta. A qualifier to magnetic class (see below)
indicating that umbra e separated by less than 2 degrees
within one penumbra have opposite polarity.
beta-delta. A sunspot group of general
beta magnetic classification but containing one (or
more) delta spot(s).
beta-gamma-delta. A sunspot group of beta-gamma magnetic classification=

but containing one (or more) delta spot(s).
gamma-delta. A sunspot group of gamma magnetic classification but
containing one (or more) delta spot(s).

multipath. Describing a degraded condition of radio
propagation in which the radio wave splits and arrives at the receiver
via different paths. Because each path will generally have different
lengths, arrival times, and phases, the signal received will suffer fad=
ing.

N

network. (1) Chromospheric: a large-scale brightness
pattern in chromospheric (see chromosphere) and
transition region spectral lines, which is located at the borders
of the photospheric (see photosphere) supergranulation
and coincides with regions of local magnetic enhancement. These cellula=
r

patterns are typically 3 x 10E+4 km across. (2) Photospheric: a bright =
pattern
that appears in spectroheliograms in certain Fraunhofer spectrum lines=
=2E
It coincides in gross outline with the chromospheric network.

neutral line. The line that separates solar magnetic
fields of opposite polarity, typically determined from solar magnetogra=
ms
recording the longitudinal magnetic component. Neutral
lines are, more properly, inversion line s).

neutron monitor. A ground-based detector that
counts secondary neutrons generated by processes originating with
the impact of atmospheric molecules and atoms by very energetic particl=
es
(galactic or solar cosmic rays).

nm (nanometer). A unit of length, 10E-9m.

noise storm. A transient enhancement of solar radio
emission, particularly at 245 MHz, consisting of an elevated background=

emission (radiation) and Type I radio bursts.

non-great-circle propagation. Describing
a degraded condition of radio propagation caused by horizontal gradient=
s
in the ionospheric electron density. The radio wave is refracted away
from its normal great-circle path, which is the shortest distance
between two points on the earth. Strong horizontal gradients are associ=
ated
with the equatorward boundary of the auroral oval (especially
in the night sector) and the sunrise terminator.

nT (nanotesla). 10E-9 tesla or 0.000000001 tesla.

O

ordinary mode. One of the two modes of propagation
of electromagnetic waves in a magnetic plasma. For
propagation along the direction of the magnetic field, it is the mode
in which the electric vector rotates opposite to the direction of
an electron gyrating freely about the field. For propagation perpendicu=
lar
to the magnetic field, the electric vector oscillates parallel to
the primary magnetic field. (See also extraordinary mode.)

=2E

GLOSSARY OF SOLAR-TERRESTRIAL TERMS

=

P

P-angle. See solar coordinates.

p-spot. See leader spot. =

PCA. See polar cap absorption.

particle flux unit (p.f.u.). 1 p/sq cm/s/sr(steradian).

penumbra. The sunspot area that may =

surround the darker umbra or umbrae. In its mature =

form it consists of linear bright and dark elements radial from the =

sunspot umbra.

perigee. That point on the orbit of an earth-orbiting =

satellite nearest to the earth. Compare apogee.

perihelion. That point on the orbit of a sun-orbiting =

body nearest to the sun. Compare aphelion.

persistence. Continuation of existing conditions. When =

a physical parameter varies slowly, the best prediction is often persis=
tence. =

p.f.u. See particle flux unit.

phantom command. An apparent (but unintended) spacecraft =

command caused by the natural environment. (See single =

event upset or electrostatic discharge.) =

photosphere. The lowest visible layer of the solar =

atmosphere; corresponds to the solar surface viewed in white =

light. Sunspots and faculae are observed in the photosphere.

pitch angle. In a plasma, the angle =

between the velocity vector of a charged particle and the direction =

of the ambient magnetic field. =

plage. On the sun, an extended emission feature of =

an active region that is seen from the time of emergence =

of the first magnetic flux until the widely scattered remnant magnetic =

fields merge with the background. Magnetic fields are more intense =

in plage, and temperatures are higher than in surrounding, quiescent =

regions. =

plage corridor. A low-intensity division in chromospheric =

(see chromosphere) plage coinciding =

with a polarity inversion line and marked by narrow =

filament segments and/or fibrils spanning the corridor.

plasma. A gas that is sufficiently ionized so as to =

affect its dynamical behavior.

plasma frequency. The characteristic frequency =

of free plasma oscillations, determined by the balance =

between electron kinetic energy and ion Coulomb attraction. =

plasmapause. The outer surface of the plasmasphere. =

plasmasheet. In the magnetosphere, the =

core of the magnetotail in which the plasma =

is hotter and denser than in the tail lobes north and south of it. =

The plasmasheet is thought to be separated from the tail lobes by =

the sheet of the "last closed field lines" and it typically lies =

beyond geosynchronous orbit.

=

plasmasphere. In the magnetosphere, =

a region of relatively cool (low energy) and dense plasma =

that may be considered an outer extension of the ionosphere =

with which it is coupled. Like the ionosphere, the plasmasphere tends =

to co-rotate with the earth. =

polar cap absorption (PCA). An anomalous condition =

of the polar ionosphere whereby HF and VHF (3-300 MHz) =

radiowaves are absorbed, and LF and VLF (3-300 kHz) radiowaves are =

reflected at lower altitudes than normal. PCAs generally originate =

with major solar flares, beginning within a few hours =

of the event and maximizing within a day or two of onset. As measured =

by a riometer, the PCA event threshold is 2 dB of absorption =

at 30 MHz for daytime and 0.5 dB at night. In practice, the absorption=
=

is inferred from the proton flux at energies greater than 10 MeV, =

so that PCAs and proton event s are simultaneous. However, =

the transpolar radio paths may still be disturbed for days, up to =

weeks, following the end of a proton event, and there is some ambiguity=
=

about the operational use of the term PCA. =

=

polar crown. A nearly continuous ring of filaments occasionally =

encircling either polar region of the sun (latitudes higher than =

50 degrees).

polar plumes. Fine, ray-like structures of the =

solar corona, best observed in the solar polar regions =

during solar minimum.

polar rain. In the earth's upper atmosphere, a weak, =

structureless, near-isotropic flux of electrons precipitating =

into the polar caps. =

pore. A feature in the photosphere, =

1 to 3 arc seconds in extent, usually not much darker than the dark =

spaces between photospheric granules. It is distinguished from a sun
spot by its short lifetime, 10 to 100 minutes.

post-flare loops. A loop prominence =

system often seen after a major two-ribbon flare, =

which bridges the ribbons. Lifetimes are several hours. =

preheating. A slow brightening of an =

active region, both optically and in x-rays, =

that sometimes precedes moderate and larger solar flare =

events by some tens of minutes. =

PRESTO. An alert issued by a Regional Warning Center =

to give rapid notification of significant solar or geophysical activity=
=

in progress or just concluded.

prominence. A term identifying cloud-like features =

in the solar atmosphere. The features appear as bright structures =

in the corona above the solar limb and =

as dark filaments when seen projected against the solar =

disk. Prominences are further classified by their shape (for example, =

mound prominence, coronal rain) and activity. They are most clearly =

and most often observed in H alpha. =

proton event. The measurement of proton flux reaching and sustaining =

> =3D 10 p.f.u. for at least 15 min at energies > 10 MeV =

by the primary SESC geosynchronous satellite. (See polar cap absorpti=
on.) =

The start time of the event is defined as the earliest time at which ev=
ent =

thresholds have been reached. There are two event thresholds, namely p=
10 and p100. =

(p10, a proton event reaching 10 p.f.u. at > 10 MeV and p100 reaching 1=
00 p.f.u. at > 100 MeV).

proton flare. Any flare producing significant counts of protons with ene=
rgies =

exceeding 10 MeV in the vicinity of the earth. =

pulsation. A rapid fluctuation of the geomagnetic =

field having periods from a fraction of a second to tens of minutes =

and lasting from minutes to hours. There are two main patterns: Pc =

(a continuous, almost sinusoidal pattern), and Pi (an irregular pattern=
). =

Pulsations occur at magnetically quiet as well as disturbed =

times. Pc's are grouped, according to their physical and morphological =

properties, into five categories:

Pc1 - periods 0.2-5 s. May occur in bursts ("pearls"), or in consecutiv=
e =

groups of pulsations with sharply decreasing frequency.

Pc2 - periods 5-10 s. Do not seem to be physically related to Pc1 or Pc=
3.

Pc3 - periods 10-45 s. Are observed over a wide range of latitudes.

Pc4 - periods 45-150 s. Are also known as Pc II or Pc. =

Pc5 - periods 150-600 s. Are sometimes called giant micropulsations. =

Q

Q index. A 15-minute index of geomagnetic =

activity intended for high-latitude (auroral) =

stations. After quiet diurnal variations are removed, Q is the largest =

deviation scaled from the undisturbed level for the two horizontal =

components. (This differs from the K index, =

which is scaled from the largest relative deviation.) The 15-minute =

periods are centered on the hour and at 15, 30, and 45 minutes past =

each hour. The range of Q is from 0 to 11; the upper limit, in nanotesl=
as, =

for each index value is given below.

Q =3D 0 1 2 3 4 5 6 7 8 9 10 11
10 20 40 80 140 240 400 660 1000 1500 2200 Unlimited

QDC. See quiet day curve. =

quiescent prominence. A long, sheet-like prominence =

nearly vertical to the solar surface. Except in an occasional activated=
=

phase, shows little large-scale motion, develops very slowly, =

and has a lifetime of several solar rotations. Quiescent prominences =

form within the remnants of decayed active regions, =

in quiet areas of the sun between active regions, or at high solar =

latitudes where active regions seldom or never form. (See filament).

quiet. A descriptive word specifically meaning (1) =

a probability of less than 50% for a C-class flare =

(see x-ray flare class) in a sunspot region; =

(2) geomagnetic activity levels such that Ak < 8.

=

quiet day curve (QDC). Especially in connection with =

the components of the geomagnetic field (see geomagnetic =

elements), the trace expected in the absence of activity. =

The K index and Q index are measured from deviations =

relative to a QDC. Riometer and neutron monitor deviations =

are also measured relative to a QDC. =

=

R =

R-number. See sunspot number. =

radar aurora. Radar returns from electron density irregularities =

in auroral regions. The strength of radar auroral returns is aspect =

dependent.

radiation belts . Regions of the magnetosphere =

roughly 1.2 to 6 earth radii above the equator in which charged particl=
es =

are stably trapped by closed geomagnetic field lines. =

There are two belts. The inner belt is part of the plasmasphere
and corotates with the earth; its maximum proton density lies =

near 5000 km. Inner belt protons are mostly high energy (MeV range) =

and originate from the decay of secondary neutrons created during =

collisions between cosmic ray s and upper atmospheric =

particles. The outer belt extends on to the magnetopause =

on the sunward side (10 earth radii under normal quiet conditions) =

and to about 6 earth radii on the nightside. The altitude of maximum =

proton density is near 16 000-20 000 km. Outer belt protons are lower =

energy (about 200 eV to 1 MeV) and come from the solar =

wind. The outer belt is also characterized by highly variable =

fluxes of energetic electrons. The radiation belts are often called =

the "Van Allen radiation belts" because they were discovered in =

1968 by a research group at the University of Iowa led by Professor =

J. A. Van Allen.

radio burst. See radio emission.

radio emission. Emission of the sun in radio wavelengths =

from centimeters to dekameters, under both quiet and disturbed conditio=
ns. =

Some patterns, known variously as noise storms, bursts, and sweeps, =

are identified as described below. These types of emission are subjecti=
vely =

rated on an importance scale of 1 to 3, 3 representing the most intense=
=2E =

Type I. A noise storm composed of many short, narrow-band bursts =

in the meter wavelength range (300-50 MHz), of extremely variable =

intensity. The storm may last from several hours to several days.

Type II. Narrow-band emission (sweep) that begins in the meter =

range (300 MHz) and sweeps slowly (tens of minutes) toward dekameter =

wavelengths (10 MHz). Type II emissions occur in loose association =

with major flares and are indicative of a shock wave moving through the=
=

solar atmosphere. =

Type III. Narrow-band bursts that sweep rapidly (seconds) from =

decimeter to dekameter wavelengths (500-0.5 MHz). They often occur =

in groups and are an occasional feature of complex solar active regions=
=2E =

Type IV. A smooth continuum of broad-band bursts primarily =

in the meter range (300-30 MHz). These bursts occur with some major =

flare events; they begin 10 to 20 minutes after the flare maximum =

and can last for hours. =

Type V. Short-duration (a few minutes) continuum noise in the =

dekameter range usually associated with Type III bursts. =

Rayleigh-Taylor instability. A fluted or ripple-like =

instability that can develop on a fluid or plasma boundary surface =

and propagate along it. This instability is often invoked to explain =

phenomena in the ionosphere and magnetosphere. =

reconnection. A process by which differently directed =

field lines link up, allowing topological changes of the magnetic =

field to occur, determining patterns of plasma flow, and resulting =

in conversion of magnetic energy to kinetic and thermal energy of =

the plasma. Reconnection is invoked to explain the energization and =

acceleration of the plasma s that are observed in solar flares, magnet=
ic =

substorms, and elsewhere in the solar system. =

recurrence. Used especially to express a tendency of =

some solar and geophysical parameters to repeat a trend and sometimes =

the actual value of the parameter itself every 27 days (the approximate=
=

rotation period of the sun).

red line. An intense coronal emission line at 637.4 nm from Fe X =

(an iron atom from which nine electrons have been stripped). =

It identifies relatively cooler regions of the corona. =

=

region number. A number assigned by SESC to a plage
region or sunspot group if one of the following =

conditions exists: (1) the region is a group of at least sunspot =

classification C; (2) two or more separated optical reports confirm =

the presence of smaller spots; (3) the region produces a solar flare; =

(4) the region is clearly evident in H alpha and exceeds 5 heliographi=
c =

degrees in either latitude or longitude. (See also active region.)

regression. A functional relationship between two or =

more correlated variables that is often empirically determined from =

data and is used especially to predict values of one variable when =

values of the others are given. =

RI. The international standard relative sunspot number. =

right ascension. The angular distance measured eastward =

along the celestial equator from the vernal =

equinox. It is expressed in hours, minutes, and seconds =

(the circumference of the celestial equator is defined as 24 hours). =

rigidity. A measure of how easily a particle =

is deflected by a magnetic field, expressed in megavolts (MV) per =

nucleon. It is the momentum per unit charge. The integral proton spectr=
um =

of a flare can be expressed as an exponential function =

of rigidity rather than a power function of energy. =

ring current. In the magnetosphere, =

a region of current that flows in a disk-shaped region near =

the geomagnetic equator in the outer of the Van Allen radiation =

belts. The current is produced by the gradient and curvature drift =

of the trapped charged particles. The ring current is greatly augmented=
=

during magnetic storms because of the hot plasma injected =

from the magnetotail. The ring current causes a worldwide =

depression of the horizontal geomagnetic field during =

a magnetic storm.

riometer (Relative Ionospheric Opacity meter). A specially =

designed ground-level radio receiver for continuous monitoring =

of cosmic noise. The absorption of cosmic noise in =

the polar regions is very sensitive to the solar low-energy =

cosmic ray flux. Absorption events are known as PCA s =

(polar cap absorption) and are primarily associated with major =

solar flares. =

rudimentary. A type of sunspot penumbra =

characterized by granular (rather than filamentary) structure, brighter=
=

intensity than the umbra, and narrow extent, and possibly =

only partially surrounding the umbra. Penumbrae are typically rudimenta=
ry =

during the sunspot formative and decay phases. =

=

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

=

S

Satellite Anomaly. The usually undesirable response of spacecraft system=
s to =

variations in the space environment. High energy particles cause detec=
tor
noise and/or physical damage to solar cells, electronics, and memory de=
vices
(single event upsets or "bitflips"). Large and varying low-to-medium e=
nergy
particle fluxes can result in a charge buildup between spacecraft compo=
nents,
especially during the eclipse season and during spacecraft maneuvers. =

Atmospheric drag on spacecraft below approximately 1,000 km can increas=
e
during geomagnetic storms, resulting in cross-track and in-track orbit =
errors
and orientation problems. Various communication interference problems
result during solar radio bursts from flares when the Sun is within the=
field of =

view of the ground tracking dish. Ionospheric irregularities during =

geomagnetic storms can cause radio telemetry scintillation and fading
=

S-band. Radio frequencies between 1.55 and 5.20 =

GHz. For satellite communication, the term usually refers to frequencie=
s =

used for earth-space communication near 2.2 GHz. =

S component. The slowly varying (weeks or longer) fluctuation =

observed in solar radio emission at microwave frequencies =

(wavelengths from 3 to 100 cm).

SC. See sudden commencement. =

scintillation. Describing a degraded condition of radio =

propagation characterized by a rapid variation in amplitude and/or =

phase of a radio signal (usually on a satellite communication link) =

caused by abrupt variations in electron density anywhere along the =

signal path. It is positively correlated with spread F and =

to a lesser degree, sporadic E. Scintillation effects =

are the most severe at low latitudes, but can also be a problem at =

high latitudes, especially in the auroral oval and over the polar caps.=
=

sector boundary. In the solar wind, the area of demarcation between =

sectors, which are large-scale features distinguished by the =

predominant direction of the interplanetary magnetic field, =

toward the sun (a negative sector), or away from the sun =

(a positive sector). The sector boundary separating fields =

of opposite polarity is normally narrow, passing the earth within =

minutes to hours as opposed to the week or so needed for passage of =

a typical sector. The solar wind velocities in the boundary region =

are typically among the lowest observed. =

SEU. See single event upset.

SFE. Solar flare effect. (See crochet.)

s.f.u. See solar flux unit. 10E-22 W/sq m/Hz =3D 10 000 jansky.

SHF. See super high frequency.

shock. A discontinuity in pressure, density, and particle =

velocity, propagating through a compressible fluid or plasma.

short wave fade (SWF). An abrupt decrease of HF radio =

signal strength, lasting from minutes to hours, caused by increased =

day-side ionization from some solar flares. An SWF is one effect =

under the broad category of sudden ionospheric disturbances (SIDs). =

SI. See sudden impulse. =

SID. See sudden ionospheric disturbance. =

sidereal. Referring to a coordinate system fixed with =

respect to the distant stars. =

simultaneous flares. Unrelated solar flares =

that occur at nearly the same time. Compare sympathetic =

flares.

single event upset (SEU). With reference to the effects =

of energetic particles on spacecraft microcircuits, an unexpected =

change in the logic state of a single digital bit. SEUs can be either =

"soft" (the microcircuit is not damaged and can be rewritten to =

either state), or a latchup, which cannot easily be reset.

smoothed sunspot number. An average of 13 monthly RI =

numbers, centered on the month of concern. The 1st and 13th months =

are given a weight of 0.5. =

solar activity. Transient perturbations of the solar =

atmosphere as measured by enhanced x-ray emission =

(see x-ray flare class), typically associated =

with flares. Five standard terms are used to describe =

the activity observed or expected within a 24-h period:

Very low - x-ray events less than C-class. =

Low - C-class x-ray events.

Moderate - isolated (one to 4) M-class x-ray events. =

High - several (5 or more) M-class x-ray events, =

or isolated (one to 4) M5 or greater x-ray events. =

Very high - several (5 or more) M5 or greater x-ray events. =

=

solar constant. The total radiant energy received vertically =

from the sun, per unit area per unit of time, at a position just outsid=
e =

the earth's atmosphere when the earth is at its average distance from =

the sun. Radiation at all wavelengths from all parts of the solar disk =
is =

included. Its value is approximately 2.00 cal/sq cm/min =3D 1.37 kW/sq =
m =

and it varies slightly (by approximately 0.1%) from day to day in res=
ponse =

to overall solar features.

solar coordinates. Specifications for a location on =

the solar surface. The location of a specific feature on the sun (for =

example, a sunspot) is complicated by the fact that =

there is a tilt of 7.25 degrees between the ecliptic plane and the sol=
ar =

equatorial plane as well as a true wobble of the =

solar rotational axis. (Only twice a year are the solar north pole =

and the celestial north pole aligned.) Consequently, to specify a =

location on the solar surface, three coordinates (P, B, L) are necessar=
y =

to define a grid. Daily values for the coordinates =

in Coordinated Universal Time (UTC) are listed in The Astronomical =

Almanac published annually by the U.S. Naval Observatory. =

The terms used to refer to the coordinates are defined as follows: =

P-angle (or P): The position angle between the geocentric =

north pole and the solar rotational north pole measured eastward from =

geocentric north. The range in P is +/- 26.3l degrees.

Bo: Heliographic latitude of the central point of the solar disk; =

also called the B-angle. The range of Bo is +/- 7.23 degrees, =

correcting for the tilt of the ecliptic with respect to the solar
equatorial plane. =

Example: If (P,Bo) =3D (-26.21 degrees, -6.54 degrees), the heliogra=
phic =

latitude of the central point on the solar disk is -6.54 degrees =

(the north rotational pole is not visible), and the angle between =

the projection onto the disk of the geocentric north pole and the =

solar north rotational pole is 26.21 degrees to the west. =

Lo: Heliographic longitude of the central point of the solar disk. The =

longitude value is determined with reference to a system of fixed =

longitudes rotating on the sun at a rate of 13.2 degrees /day =

(the mean rate of rotation observed from central meridian transits =

of sunspots). The standard meridian on the sun is defined =

to be the meridian that passed through the ascending node of the sun'=
s =

equator on 1 January 1854 at 1200 UTC and is calculated for the prese=
nt =

day by assuming a uniform sidereal period of rotation =

of 25.38 days. =

Once P, Bo, and Lo are known, the latitude, central meridian distance, =
and longitude of a specific solar feature can be determined as follow=
s:

Latitude. The angular distance from the solar equator, measured north =
or south along the meridian.

Central meridian distance (CMD). The angular distance in solar longitud=
e =
measured from the central meridian. This position is relative to the =
view from earth and will change as the sun rotates; therefore, this =
coordinate should not be confused with heliographic positions that =
are fixed with respect to the solar surface. =

Longitude. The angular distance from a standard meridian (0 degrees =
heliographic longitude), measured from east to west (0 degrees =
to 360 degrees) along the sun's equator. It is computed by =
combining CMD with the longitude of the central meridian at the time =
of the observation, interpolating between ephemeris =
values (for 0000 UT) by using the synodic rate of solar =
rotation (27.2753 days, 13.2 degrees per day). =

solar cycle. See sunspot cycle. =

solar flare effect (SFE). See crochet.

solar flux unit (s.f.u.). See s.f.u.

solar maximum. The month(s) during the sunspot cycle =
when the smoothed sunspot number reaches =
a maximum. A recent solar maximum occurred in December 1979. =

solar minimum. The month(s) during the sunspot =
cycle when the smoothed sunspot number reaches =
a minimum. A recent solar minimum occurred in September 1986. =

solar radio emission. See radio emission.

solar rotation rate. (1) synodic: l3.39 degrees -2.7 degrees sin squared=
=
(solar latitude)/day. (2) sidereal: 14.38 degrees -2.7 sin sq.(solar=
latitude)/day. The difference between sidereal and synodic =

rates is the earth orbital motion of 0.985 degrees/day. =

=

solar sector boundary (SSB). The boundary between large-scale =

unipolar magnetic regions on the sun's surface, as determined =

from inversion lines mapped using filaments and filament =

channels, or large-scale magnetograms. The supposed solar =

signature of an interplanetary sector boundary.

solar wind. The outward flow of solar particles and =

magnetic fields from the sun. Typically at 1 AU, solar wind velocities =

are near 375 km/s and proton and electron densities are near 5 per cubi=
c =

centimeter. The total intensity of the interplanetary magnetic field i=
s =

nominally 5 nT. =

solstice. A point on the ecliptic where =

the sun reaches its greatest absolute declination. =

There are two of these points, halfway between the equinoxes; =

they mark the beginning of summer and winter.

South Atlantic anomaly (SAA). A region of the earth =

centered near 25 degrees S 50 degrees W (geographic =

coordinates, near the Atlantic coast of Brazil) of low geomagnetic =

field intensity owing to the fact that the geomagnetic field axis =

is offset from the center of the earth (see corrected geomagnetic =

coordinates.) One consequence of the SAA is that trapped particles =

in the plasmasphere drift closer to the earth's surface =

and can more easily be lost into the atmosphere. The result is that =

the F region (see ionosphere) is highly variable in this region, an=
d =

satellites in low earth orbits suffer greater radiation doses when =

they pass through the SAA. There is a corresponding location of =

maximum geomagnetic field intensity in Southeast Asia.

spacecraft charging. A term that encompasses all the =

charging effects on a spacecraft due to the environment in space. =

Occasionally this term is used in a more limited sense to mean surface =

charging. =

spicules. Rapidly changing, predominantly vertical, =

spike-like structures in the solar chromosphere =

observed above the limb. Spicules appear to be ejected =

from the low chromosphere at velocities of 20 to 30 km/s
reaching a height of about 9000 km and then falling back or fading. =

The total lifetime is 5 to 10 minutes. =

sporadic E (Es). Transient, localized patches of relatively high =

electron density in the E region of the ionosphere, which =

significantly affect radiowave propagation. Sporadic E =

can occur during daytime or nighttime, and it varies markedly with =

latitude. Es can be associated with thunderstorms, meteor showers, sol=
ar =

activity and geomagnetic activity. =

spray (SPY). Luminous material ejected from a solar flare with sufficient=
=

velocity to escape the sun (675 km/s). Sprays are usually seen in H al=
pha =

with complex and rapidly changing form. There is little evidence that =

sprays are focused by magnetic fields. Compare surge.

spread F. A condition of the F region
of the ionosphere caused by patches of ionization =

that scatter or duct radio signals, characterized on ionograms =

by a wide range of heights of reflected pulses. In equatorial latitudes=
=

spread F is most commonly observed at night and may be negatively =

correlated with geomagnetic activity; at high latitudes =

spread F occurs throughout the daytime and is positively correlated =

with magnetic activity. The latitude of minimum occurrence of spread =

F is near 30 degrees magnetic latitude.

SPY. See spray.

Sq. The diurnal variation of the geomagnetic =

field. The Sq variation is explained in terms of solar tidal motions =

of the ionosphere and thermally driven ionospheric =

winds.

SSB. See solar sector boundary.

SSC. See sudden commencement.

storm. See geomagnetic storm.

stratosphere. That region of the earth's atmosphere =

between the troposphere and the mesosphere. =

It begins at an altitude of temperature minimum at approximately 13 =

km and defines a layer of increasing temperature up to about 50 km. =

STRATWARM. A code word designating a major =

disturbance of the winter, polar, middle atmosphere from the tropopause=
=

to the ionosphere, lasting for several days at a time =

and characterized by a warming of the stratospheric temperature by =

some tens of degrees. There is no evidence that stratwarms are caused =

by solar events, or that they affect the lower atmosphere. (In fact, =

the disturbance may be generated by tropospheric conditions). =

=

subflare. See flare.

substorm. A geomagnetic perturbation lasting 1 to 2 =

hours, which tends to occur during local post-midnight nighttime. =

The magnitude of the substorm is largest in the auroral zone, potential=
ly =

reaching several thousand nanoteslas. A substorm corresponds to an =

injection of charged particles from the magnetotail =

into the auroral oval.

sudden commencement (SC, or SSC for Storm Sudden Commencement). =

An abrupt increase or decrease in the northward component =

(see geomagnetic elements) of the geomagnetic field, which marks the =

beginning of a geomagnetic storm. SCs occur almost simultaneously =
worldwide but with locally varying magnitudes.
sudden impulse (SI + or SI -). A sudden perturbation, =
positive or negative, of several nanoteslas in the northward component =
(see geomagnetic elements) of the low-latitude =
geomagnetic field, not associated with a following geomagnetic =
storm. (An SI becomes an SC if a storm follows.) =
Sudden ionospheric disturbance (SID). Any of several =
radio propagation anomalies due to ionospheric changes resulting from =
solar flares. Anomalies include short wave =
fades, enhancements of atmospherics, phase shifts, =
cosmic noise absorptions, and signal enhancements.
sudden ionospheric disturbance (SID). Any of several =
radio propagation anomalies due to ionospheric changes resulting from =
solar flares. Anomalies include short wave fades, enhancements =
of atmospherics, phase shifts, cosmic noise =
absorptions, and signal enhancements.
sunspot. An area seen as a dark spot, in contrast with =
its surroundings, on the photosphere of the sun. Sunspots =
are concentrations of magnetic flux, typically occurring in bipolar =
clusters or groups. They appear dark because they are cooler than =
the surrounding photosphere. Larger and darker sunspots sometimes =
are surrounded (completely or partially) by penumbrae. =
The dark centers are umbrae. The smallest, immature =
spots are sometimes called pores. =
sunspot classification (Modified Zurich Sunspot =
Classification). As devised by McIntosh, a 3-letter designation =
of the optical, white-ligh t characteristics of =
a sunspot group. The general form of the designation =
is Zpc. One letter is chosen from each of the following three categorie=
s. =

The categories are illustrated in Appendix C.

Z (the modified Zurich class of the group):

A - A small single sunspot or very small group =

of spots with the same magnetic polarity, without penumbra.

B - Bipolar sunspot group with no penumbra. =

=

C - An elongated bipolar sunspot group. One sunspot must =

have penumbra, and penumbra does not exceed 5 degrees in =

longitudinal extent.

D - An elongated bipolar sunspot group with penumbra on both ends of =

the group; longitudinal extent of penumbra is more than 5 =

degrees, but does not exceed 10 degrees. =

=

E - An elongated bipolar sunspot group with penumbra on both ends. =

Longitudinal extent of penumbra exceeds 10 degrees but not =

15 degrees

F - An elongated bipolar sunspot group with penumbra on both ends. =

Longitudinal extent of penumbra exceeds 15 degrees.

H - A unipolar sunspot group with penumbra. Class H sunspot groups =

become compact Class D or larger when the penumbra exceeds 5 =

degrees in longitudinal extent.

p (the penumbra type of the largest spot in the group): =

x - no penumbra =

r - rudimentary =

s - small (< =3D 2.5 degrees north-south diameter), symmetric =

a - small, asymmetric =

h - large (> 2.5 degrees north-south diameter), symmetric
k - large, asymmetric =

=

c (the compactness of the group):

x - a single spot =

o - open =

i - intermediate =

c - compact =

sunspot cycle. The approximately 11-year quasi-periodic =

variation in the sunspot number. The polarity pattern =

of the magnetic field reverses with each cycle. Other solar phenomena, =

such as the 10.7-cm solar radio emission, exhibit =

similar cyclical behavior.

sunspot number. A daily index of sunspot =

activity (R), defined as R =3D k (10g +s) where s =3D number of =

individual spots, g =3D number of sunspot groups, and k is an =

observatory factor (equal to 1 for the Zurich Observatory and =

adjusted for all other observatories to obtain approximately the =

same R number). The standard number, RI, once derived at Zurich (see W=
olf =

number), is now being derived at Brussels and is denoted by RI. Often, =

the term "sunspot number" is used in reference to the widely distribute=
d =

smoothed sunspot number. =

super high frequency (SHF). That portion of the radio =

frequency spectrum from 3 GHz to 30 GHz.

supergranulation. A system of large-scale velocity =

cells that does not vary significantly over the quiet solar surface =

or with phase of the solar cycle. The cells are presumably convective =

in origin with weak upward motions in the center, downward motions =

at the borders, and horizontal motions of typically 0.3 to 0.4 km/s. =

Magnetic flux is more intense along the borders of the cells.

=

surge. A jet of material from active regions =

that reaches coronal heights and then either fades or returns into =

the chromosphere along the trajectory of ascent. Surges =

typically last 10 to 20 minutes and tend to recur at a rate of approxim=
ately =

1 per hour. Surges are linear and collimated in form, as if highly =

directed by magnetic fields. Compare spray.

SWF. See short wave fade. =

sympathetic flares. Solar flares in different active regions that appare=
ntly =

occur as the common result of activation of a coronal connection betwee=
n the =

regions. Compare simultaneous flares.

synodic. Referring to a coordinate system fixed on the earth.

synoptic chart. A map of the whole sun in absolute =

heliographic coordinates, displaying an integrated view of solar featur=
es =

observed during a Carrington rotation. =

T

TEC. See total electron content.

TED. Total (particle) Energy Deposition. The TIROS/NOAA =

instrument used to estimate the hemispherical power input. (See =

estimated hemispherical power input.) =

tenflare. A solar flare accompanied by a 10-cm radio noise burst =

of intensity greater than 100% of the pre-event 10-cm flux value.

Theophrastus (Theo). The name of the rule-based =

expert system used to assist SESC solar region =

analysis and solar flare prediction. =

thermosphere. That region of the earth's atmosphere =

where the neutral temperature increases with height. It begins above =

the mesosphere at about 80-85 km and extends to the exosphere.

total electron content (TEC). The number of electrons =

along a ray path between a transmitter and a receiver. Units are electr=
ons =

per square meter. This number is significant in determining ionospheric=
=

effects such as refraction, dispersion, and group delay on radio waves,=
=

and can be used to estimate critical frequencies. The TEC is strongly =

affected by solar activity and geomagnetic activity.

transition region. That region of the solar atmosphere =

lying between the chromosphere and the corona =

where the temperature rises from 10000 K to 1000000 K. =

The transition region is only a few thousand kilometers thick. =

=

transverse. Component of magnetic field vector perpendicular =

to direction of view, parallel to solar surface at disk center.

troposphere. The lowest layer of the earth's atmosphere, =

extending from the ground to the stratosphere at approximately =

13 km of altitude.

two-ribbon flare. A flare that has developed as a pair of bright strands=
=

(ribbons) on both sides of an inversion line of the solar magnetic fie=
ld. =

Type I, II, III, IV, V. See radio emission. =

U

U-burst. A radio noise burst associated with =

some flares. It has a U-shaped appearance in =

an intensity-vs.-frequency plot. The minimum intensity =

falls roughly between 500 and 2000 MHz. A U-burst is sometimes =

called a Castelli U. =

UHF. See ultrahigh frequency.

ultrahigh frequency (UHF). That portion of the radio =

frequency spectrum from 300 MHz to 3 GHz.

ultraviolet (UV). That part of the electromagnetic =

spectrum between 5 and 400 nm.

umbra. The dark core or cores (umbrae) in a sunspot
with penumbra, or a sunspot lacking penumbra. =

UMR. See unipolar magnetic region. =

unipolar magnetic region (UMR). A large-scale =

photospheric region where the magnetic elements are predominantly =

of one polarity (for example, the solar polar regions).

Universal Time (UT). A shortened form of the more correct =

Coordinated Universal Time (UTC). =

unsettled. With regard to geomagnetic activity, =

a descriptive word between quiet and active specifically =

meaning that the Ak index is between 8 and 16. =

upsets. See single event upsets.

UT or UTC. See Coordinated Universal Time. =

UV. See ultraviolet. =

=2E
GLOSSARY OF SOLAR-TERRESTRIAL TERMS

V

Van Allen radiation belts. See radiation belts.

vernal equinox. The equinox that occurs in March.
Compare autumnal equinox.

very high frequency (VHF). That portion of the radio
frequency spectrum from 30 to 300 MHz.

very low frequency (VLF). That portion of the radio
frequency spectrum from 3 to 30 kHz.

VHF. See very high frequency.

VLF. See very low frequency.

W

white light (WL). The sum of all visible wavelengths
of light (400-700 nm) so that all colors are blended to appear white
to the eye. No pronounced contribution from any one spectral line
(or light-emitting element) is implied.

white-light flare. A major flare in which small parts become visible
in white light. This rare continuum emission is caused by energetic
particle beams bombarding the lower solar atmosphere. Such flares
are usually strong x-ray, radio, and particle emitters.

wing. Portion of a spectroscopic absorption (or emission) line
between the core of the line and the continuum adjacent to the line.

WL. See white light.

Wolf number. An historic term for sunspot number. In 1849,
R. Wolf of Zurich originated the general procedure
for computing the sunspot number. The record of sunspot numbers that
he began has continued to this day.

WWV. Call letters of the radio station over which National
Institute of Standards and Technology broadcasts time-standard
signals at 2.5, 5, 10, 15, and 20 MHz. Solar-terrestrial conditions
and forecasts are broadcast at 18 minutes past the hour.

X

X-band. Designates those radio frequencies between 5.2 and 10.9 GHz.

x-ray. Radiation of extremely short wavelength (generally less than 1 nm)=
=2E

x-ray background. A daily average background x-ray flux in the
0.1 to 0.8 nm range. It is a midday minimum given in terms of x-ray fl=
are class.

x-ray burst. A temporary enhancement of the x-ray
emission of the sun. The time-intensity profile of soft x-ray
bursts is similar to that of the H alpha profile of an
associated flare. Soft x-rays are those of energies less than
20 keV, or wavelengths longer than 0.05 nm.

x-ray flare class. Rank of a flare
based on its x-ray energy output. Flares are classified by the
Space Environment Services Center according to the order of magnitude
of the peak burst intensity (I) measured at the earth in the 0.1 to
0.8 nm band as follows:

Class Peak, 0.1 to 0.8 nm band

W/square m ergs/square cm/s

B I < 10.0E-06 I < 10.0E-03
C 10.0E-06 < =3D I < 10.0E-05 10.0E-03 < =3D I < 10.0E-0=
2
M 10.0E-05 < =3D I < 10.0E-04 10.0E -02< =3D I < 10.0E-0=
1
X I > =3D 10.0E-04 I > =3D 10.0E-01

x-ray flare termination. The end time is defined as the time the flux ha=
s
decayed to 1/2 the peak flux of the event.

=

Y

yellow line. A coronal emission line at 569.4 nm from
Ca XV (a calcium atom from which 14 electrons have been stripped).

It identifies the hottest regions of the corona.

Z

Z. Zulu Time. (See Coordinated Universal Time.)

Z component of the geomagnetic field. See geomagnetic elements.

Zeeman effect. The splitting of spectral emission lines
due to the presence of a strong magnetic field. Briefly, the lines
split into three or more components of characteristic polarization;
the components are circular if the local magnetic
field is parallel to the line of sight, and linear
if the field is perpendicular to the line of sight. The amount of
splitting is proportional to the strength of the field.

Zurich sunspot classification. See sunspot classification.

Zurich sunspot number. See sunspot number.

APPENDIX A: ACRONYMS AND INITIALISMS

AFB - Air Force Base
AFGL - formerly the Air Force Geophysics Laboratory at Hanscom
AFB, MA. Recently renamed Phillips Laboratory (See PL)
AFSFC - Air Force Space Forecast Center (at Colorado Springs, CO)
ALMEDS - ALaskan MEteorological Data System
ASCII - American Standard Code for Information Interchange
AUTODIN - AUTOmatic DIgital Network
AWS - Air Weather Service (USAF)

COMEDS - CONUS MEteorological Data System

>>far is
>>"local"? Can one still talk to someone on 10M, say 300 miles away
>>under
>>less than ideal band conditions?
>
>

"Local" depends on your antenna/power/location, but I've found that with 20 watts and a vertical it is possible to (just) talk to people 50km away at any time. However, sigs are pretty weak.

I do a bit of pedestrian mobile operation on 10m. I have a converted SSB CB, sealed lead acid battery, 6ft mobile whip and single radial. I've had solid contacts up to 3000km away while just walking down the street (that was in Jan 1997). Even had 1000km QSOs while using 4w AM pedestrian mobile.

This is made possible by sporadic-E during the mid winter and mid summer months. However, the rising sunspot number will make it possible to have more DX QSOs while pedestrian mobile. Yesterday I called an Italian station whilst pedestrian mobile. I worked him previously that day with 20w and a vertical from home, but the pedestrian mobile didn't quite make it. Maybe in 12 mths time these type of QSOs will be possible pedestrian mobile.

The 27 MHz CB band is a good place to check for openings - often 10m may be open but there's not many opwerators about. However there's exceptions - in one pedestrian mobile session I had 10 QSOs in 80 minutes.

Hi. My name is TRouBLe MaKer. I have a ham and scanner related web site. Now, it is very easy to navigate (frames installed) !!

The contents are as follows:

- What's new ? (IC Canada Update etc., link to IC Canada's web site)

- Montreal Area Repeater Directory (including hidden illegal repeaters.) There is also a link to a page where you see all VE2 and VA2 (the province of Quebec) repeaters.

- Amateur Radio Basic Qualification Study Guide (online full version)

- General Information Sheet for Amateurs and Pros

- Amateur Radio Freqs and Countries concerned

- US Amateur Radio Exam Page

- Ham frequencies and British Columbia Frequencies

- Ham calling frequencies

- Ham license structure worldwide (Canada, US, Japan, Australia, New Zealand... and there are links that help you to obtain the Australian and New Zealanders license while you stay there !!)

- US Frequency Band Allocations (for each license)

- Amateur Radio Satellite Frequencies

- Space Station MIR Information Centre

- Amateur Radio Station Prefixes

- Royal Canadian Mounted POLICE 10 codes & International Q code list

- International Morse Code

- CB Information Desk

- International Air & Marine Frequencies

- Propagation General Information Centre

- HF Propagation PREDICTION online

- RS Scanner Info

- ADI's AT-600 Dual Band Information

- Cellular Phone Listening Centre (Cordless Phone will be
added soon !!)

- Radio Modification Centre

- VE7JPN & VA2QRU Station Equipments

It's at

http://www.radiotelephone.net/amateur/

See you there !!

Ohio/Penn DX Bulletin No. 333

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 333
BID: $OPDX.332
December 1, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2BF, N2NL, NY2U, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, K4JRB, N5OGP, W5IJU & Island/DX News, KD6BYI, K7WX, DL2CC, F6AJA & LNDX, G4BUE & DX News Sheet, G4FRE and LU1DZ for the following DX information.

10-10 NET. With 10 meters becoming very active, check out the Channel Islands Chapter's "10X International Net" every Wednesday at 1800-2000z and again at 0200-0400z. Non-members are welcome. For more information, send E-mail to: rcnoll@ix.netcom.com

5X, UGANDA. Frank, DL2CC, will be active until December 3rd with the callsign 5X1M. His activity will be mainly on CW and the low bands, but also RTTY and SSB. QSL via ON5NT.

8Q, MALDIVES. (Excerpts from a press release. OPDX InterNet Subscribers will receive an additional bulletin with the complete news release). The Central Arizona DX Association has announced an upcoming DXpedition to the Republic of the Maldives (8Q7, Zone 22, Indian Ocean). The team leaves Los Angeles for Taipei on January 16th, and will arrive in the capital city of Male by January 18th, after a brief stopover in in Singapore. Their plans are to be active beginning January 19th, with 24 hour operating on most bands through January 28th. They will be using the callsign 8Q7AA. Members of the 8Q7AA DXpedition team will be:

For SSB: Nilda/NP3BY, Oscar/KP4RF, Sally/KM5EP, Rich/K7ZV and Dan/NA7DB
For CW: Bruce/N6NT, Darryl/AF7O, Warren/K7WX, Steve/N7TX and Stephen/NN7X
For RTTY: Bruce/N6NT will also run HF RTTY as operating time permits.

There will be four stations running Yaesu FT-1000MP transceivers, Alpha amplifiers and Force 12 antennas from 160 through 10-meters, including all WARC bands. A concentrated effort will be made on the low bands with

adequate power and antennas. N6NT, K7WX, K7ZV and NN7X will focus on 40, 80 and 160-meters, with special attention being given to openings for North America. The 8Q7AA operation will be active during the CQWW 160 meter CW DX Contest. This contest begins at 2200 GMT on January 23 and ends on January 25th. 8Q7AA will be a high power multi-operator entry in this contest. QSL requests can go to N7TX either direct, bureau or E-mail routes. Direct QSLs to: Steve Thompson, N7TX, 119 E. Jasmine St., Mesa, AZ 85201-1811 USA (Please enclose an airmail SASE with adequate postage.) Bureau QSLs: Cards should be clearly marked 8Q7AA via N7TX. Internet: Bureau QSLs can be requested by sending E-mail to the following address: n7tx@cadxa.org -- More complete details are available at their WWW home page: http://www.cadxa.org/8q7aa

9K, KUWAIT. The "DXNS" report Bob, 9K2ZZ, is once again active. He will be there until December, 1998. A log server is available at the following WEB site: http://194.54.253.223/ QSL via W8CNL, direct only.

ATTENTION RTTY CONTESTERS! William "Mr. Bill" Eddy, NY2U, President of TARA and Contest Manager, has informed OPDX that QST has published the wrong dates for the "TARA RTTY Sprint". Mr. Bill states the Troy Amateur Radio Association (TARA) has, for the last six years, sponsored the "Annual TARA RTTY SPRINT" which is normally held on the second weekend of December. However, this year the contest was moved to the first weekend of December (6th and 7th) to avoid any conflict with the ARRL's 10 Meter Contest. The trouble they have now is that the ARRL has put their OLD contest weekend date (December 13rd and 14th) in their November issue of QST, on page 94! Mr. Bill states, "I would feel really terrible if somebody missed our contest due to this error." He has also supplied OPDX with the complete set of "Official Rules and Regulations" for the contest. OPDX InterNet Subscribers will receive this as an additional bulletin.

ATTENTION 160M CONTESTERS! It has been reported that the December issue of the CQ Contest Column has the wrong mode listed for the January contest dates. January is CW not SSB. The SSB dates are February 27th to March 1st (2200Z to 1600Z). The conetst was moved back one week to avoid the ARRL CW DX Contest.

A4, OMAN. After their stay and activity from Ali's (A61AJ) QTH, look for David/K3LP and Rich/KE3Q to be active as A43/K3LP and A43/KE3Q. They will stay in Muscat from December 2-5th. QSL via W3UR (ex WR3E).

GD, ISLE OF MAN. Look for Steve this week (if you do not work him during the contest this past weekend) as GD4UOL. His activity will last until December 6th with operations on CW. QSL via GD Bureau.

IOTA NUMBERS PLEASE! Some indivduals were asking what the IOTA numbers were for Deception Island (LU1ZC) and Staten Island (L20XSI) mentioned in last week's bulletin (OPDX.332). Staten Island is IOTA SA-049 and Deception Island is IOTA AN-010.

J8, ST. VINCENT. "The Daily DX" reports that Volkmar, DF2SS, will operate from this Caribean Island from December 20th to January 9th. He will be signing J8/DF2SS. He plans to be active on RTTY and CW. QSL via DL2MDZ.

KH2, GUAM. Dave, N2NL, reports he is being transferred (he is with the U.S. Coast Guard) to Guam in January. He will be there for at least 2 years. Dave has indicated he will be active as N2NL/KH2 sometime in the spring (once all his equipment has arrived on the island). He will operate mostly CW and will be active on most bands and in contests. His operating time will be somewhat limited due to the nature of his job (he is stationed on a patrol boat but plans to be quite active when he can). He also mentions his tentative plans to put KH2 and KH0 on 160 meters during the winter season of 1998 and 1999 (especially to help Europe and the US with these two countries on topband). His tentative QSL information is via either W2YC or CBA.

MU, GUERNSEY. If you were lucky to work Jay, K4LZE, as MW0BKA from Wales, you may be just as lucky to catch him as MU0BKA from Guernsey between December 4-9th. His activity will be mainly CW 160-10 meters, 7 kHz up from bottom of the band edge. There will be some SSB. QSL via home call.

NEW PROPAGATION SERVICE AVAILABLE FOR AMATEURS! Announced this week was the availability of a new radio propagation service known as "CAROS", or the Coordinated Amateur Radio Observation System. This service can be found on the World-Wide-Web at: http://solar.uleth.ca/solar/www/caros.html CAROS is based on the principle of amateurs contributing radio propagation information for others to use. They have been planning to implement such a service primarily to test whether amateurs can supply sufficient information to make such a global service useful. Its success or failure will be directly dependent upon those who use it and find it useful. The complete announcement and details will be available to all OPDX InterNet Subscribers as an additional bulletin.

OFFICERS ELECETED.....
By acclamation, the North Jersey DX Association has re-elected its incumbent officers to serve for another year: President - Ben Friedland, K2BF; Vice President - John Sawina, NA2R; Treasurer - Gene Ingraham, N2BIM and Secretary Bill Hudzuk, W2UDT

The Oklahoma DX Association has elected the following officers for their 1997-98 Associational year: President - Bruce Burnette, K5PX; Vice President - Craig Boyer, AH9B; Vice President - Dave Land, KD5FX and Secretary/Treasurer - Mark Byard, N5OGP. The following Directors have been appointed: Northwest - Lu Fisher, K5YP; Southwest - Troy Warren, K5OH; Central - Coy Day, N5OK; Southeast - Lee Ward, W5UDA and Northeast - Jerry Chouinard, K5YAA.

P4, ARUBA. The 59(9) DXReport states Martin, VE3MR, will be here as P40MR until late April. He operates SSB. QSL via VE3MR.

QSL INFO FOR THE CQWW CW DX CONTEST. If you are looking for help to locate QSL help on the stations you worked this past weekend during the contest, check out the following WEB sites. These sites are updated almost daily:

Dennis, K7BV, keeps a list of the DXpeditions that were to be active in the contest on the NCJ WEB site at: http://waterw.com/~ncj

Bill's (NG3K) Web sites also has info which can be obtained at: http://www.cpcug.org/user/wfeidt/Misc/cqcw97.html (or his mirror site if server is down: http://www.his.com/~wfeidt/Misc/cqcw97.html)

SPECIAL EVENT. The French DX Bulletin reports that F5HWB will be using the special callsign TM0UN from November 29th to December 4th for "World Day for Disable Persons". QSL via F5HWB.

SPECIAL EVENT. Members from the Northern Ohio Amateur Radio Society (NOARS) will be active on the U.S.S Cod Submarine, located on the shores of Lake Erie in Cleveland, Ohio, December 7th, which is Pearl Harbor Day. They will be using the callsign K8KRG. There will be network news coverage at the submarine as well as "Ham Radio" operations on the General parts of the bands, mainly 40 and 80 meters. A new color QSL card can be obtained.

SPECIAL EVENT. Joel, WU1F, announces he will be active as K1K from December 23-30th to celebrate the eight nights of Hanukkah ("The Festival of Lights"). QSL via WU1F (direct or bureau).

VK, AUSTRALIA (and the Fiji Islands). Dave, G4FRE, and Meg, G7FRE, are currently operating from here on 80-6 meter as VK2IDR and VK2TNL respectively until December 15th. They will be in Fiji, December 16-20th on their way back to the USA. They are currently awaiting the licencing paperwork to operate from there. There is a good possibility the itinerary will be repeated after Christmas. QSLs via G3AUA.

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX Bulletin) take note, the area code has changed as of August 16th. The new 440 area code will replace the 216 area code. Currently both area codes can be used, but the 216 area code will be permanently replaced in April, 1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

3017. QSL info for FO0GUI or F5UIV

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-01 00:00:00 UTC
From: dwhitt@ix.netcom.com
Message-ID: <65tbhq$rmb@sjx-ixn1.ix.netcom.com>
Source record: 31173

Hello all. I contacted FO0GUI last week and he indicated that I should QSL via his home call, F5UIV. I verified this on a couple of QSL info sites, but have yet to find any address for F5UIV. Anyone have a good address for F5UIV?

Also, I contacted YV5NNW during the CQ WW DX SSB contest, but can't find any information on him at all. Does anyone have an address or QSL information on him?

Thanks for any assistance.

73,
Dave, KQ6SL

Howdy Geoffrey,

Check my CAPMan web site on the "freeware" page. There is a DXCC list in
windows help format. Maybe it will help.

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

Yet another list with the M MM MW MD, etc UK calls missing.

No wonder it takes me ages to try to convince W's which country they are working when I'm operating through the FO birds :>)

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

73

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)

C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio" <power@radio.net>
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.

The implications of this will not intirely be felt for another 15 to 20
years.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Thanks for reminding us. None of us have a web brower, none of us know about half a dozen contest pages on the internet, none of us ever read the rules of any of the contests, we just turn the radio on and call everybody. What would we do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

AMAZING ! Kenwood discontinued that radio 18 months ago, and you
just got yours LAST WEEK !! Where did you buy it, from an antique
collector ? Don't tell me, you bought it two years ago, but you have been
SOOO busy, you just didn't have time to unwrap it and give it a blast....

>Kenwood TS850S/AT 100watts output continuos duty.
>Variable digital display bandwidth, Built in Antenna tuner.
>Will Include Brand New PS-52 power Supply In original Box.

The Original Box. Always makes used gear work SO much better.
Whenever I work somebody on HF with a big signal, I always ask
them 'Do you have the ORGINIAL BOX for your rig?'

>Asking $1125.00 for the Radio, Power Supply, Original Mic and Power
>Cable PC-2Y, will ship UPS in Original carton.

Must be a pretty damn big carton if you can fit UPS in it. Hate to see the
shipping charges on that puppy.....

>Contact me at Work: 888-440-3266 Ext. 52
>Email: livio@dominicano.com

>NON SMOKER !

WOW ! What a great selling point ! Do most Kenwood TS850SAT's die
of lung cancer from second hand smoke in a week ?

Should have mentioned if you were a NON DRINKER ! or not too. I imagine
a lot of hams who buy used equipment wonder if the previous owner ever
got drunk and pee'd on the radio they were trying to sell ......

>PS: I just received my New TS950SDX.

My deepest sympathy. Net time, try Icom. You'll hear things you never
heard before..... Or try Yeasu. They'll give you a NEW ORIGINAL BOX
every time you send the radio back for repair.

>Thanks...

You are quite welcome. And by all means, next time you have something
to sell, post it EACH and EVERY newsgroup that has ANYTHING to do
with ham radio. Most of us who read these other newsgroups are too
dumb to find SWAP all by ourselves.

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the experience of HF methods and technology, and the "mechanics" of an HF station and the "feel" for propagation and international contacts. The implications of this will not intirely be felt for another 15 to 20 years.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,

a small portion of each amateur band should be opened up for the no-code technician to experiment on the HF bands. I believe this to be satisfactory since the only real valid arguement for keeping code other than as a method to limit the number of licences, is for the grave emergency senario where a disaster has occurred and someone is touching two sparking wires together to tap out morse code or something as equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a requirement. However, I think it is a wonderful practice, and for those who enjoy it as amateurs, I think they should have areas in the HF spectrum where they can use morse code unhindered and uninterupted. However these same gentlemen should also recognize that there are other people with other desires and should be tolerant of new ideas and usage of the amateur spectrum by amateurs.

I wonder where you heard this information? Its totally bogus. The ARRL had very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country's licensing authority. Given the nature of your bizarre "incentive" system I'd say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we've got the America's Cup too. Damn we're good.

Regards Ian Gill ZL3TGK

part 2. if anyone has any QSL information
on the station's on my list,please let
me know. As you can see by the
dates of the QSO's, they were some
time ago, i was only a kid at the
time. i hope some of the stations
are still around. well it's worth a try.
thank's and 73's..............

Dyslexics of the world! Untie!

For those of you who feel insulted by this...too bad. I am slightly
dyslexic myself and if I want to poke fun
I will.

There are approx 324 countries currently on the list. As far as the
cards, hang in there, it may take years to get some, others as you
already know come in a few months

check out this site for good info. It's sponsored by the North Jersey Dx
Association

---------- I am in my 50's and returned to Ham after 40 years last year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

*** The Daily DX ***
======================
Volume 1 Number 181
December 5, 1997
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------
```

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still
must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.
Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Thanks for reminding us. None of us have a web brower, none of us know about half a dozen contest pages on the internet, none of us ever read the rules of any of the contests, we just turn the radio on and call everybody. What would we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every

licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those
idiots, I probably would have left the hobby just as quickly as I had
entered it.
The problem is that many of these newcomers do not find an elmer and
consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without
anyone telling you what to do" era, they mostly reside between 27 and 28

mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you
gotta do is add a little Code to your memorized written and it's all
yours!"

" No? Not interested in code? Well then, how about we just give you a
license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to
hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The
only part of the current generation we are losing on HF is the part that
we could never attract anyway---they are just not interested enough to
become hams. There have always been lots of those people around. The
more things change the more they stay the same. As can be seen, many
people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the
beginners necessary to keep it alive without resorting to effortless
licenses for all comers, we should just let it die a quiet death, as it
naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a

requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed

DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom, the only folks "excluded" from the HF allocations are those who exclude themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be within

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around
12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished
there Pursian gulf outing yesterday after 15:00Z.
They will be home around 19:00Z on 6 December. QSL
via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5
between 04:00 and 06:00Z. On 14 December he will
be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday
from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

IOTA

The following IOTA stations were active yesterday.

IOTA REFERENCE NUMBERS ISSUED IN NOVEMBER 1997

AS-131/Prov BY7 GUANGDONG PROVINCE WEST group (Chinese islands,
letter "c") following the operation by BD7IA/7,
BD7IX/7, BD7JA/7, BD7YA/7 and BG7NQ/7 from Gui-
Shan Island.

AS-132/prov XV,3W FAI TSI LONG ARCHIPELAGO (Vietnamese islands,
letter "e") following the operation by XV8FP
from Cac Ba Island.

OPERATIONS WHICH HAVE PROVIDED ACCEPTABLE VALIDATION MATERIAL (*)

AS-128 XV,3W MEKONG DELTA WEST group (Vietnam, operation from
Quan Phu Quoc Island by 3W4EZD in June/July
1997).

AS-130 XW,3W CON SON group (Vietnam, operation by 3W5MNB,
3W5KDN, 3W5KVR and 3W5FS from Con Dao).

AF-032 5H1/DL7VSN Zanzibar (September 1997)
EU-040 CQ1I Berlenga (August 1997)
SA-057 CX/LU7DW Timoteo Dominguez (July 1997)

(*) Includes operations where validation material was volunteered, ie
not specifically required for credit to be given - in all cases cards
now submitted will be accepted by Checkpoints.

PROVISIONAL IOTA REFERENCE NUMBERS (YET TO BE CONFIRMED) <<<

AS-131/Prov BY7 GUANGDONG PROVINCE WEST group (China, operation
from Gui-Shan Island by BD7IA/7, BD7IX/7,
BD7JA/7, BD7YA/7 and BG7NQ/7 in November 1997).

AS-132/prov XV,3W FAI TSI LONG ARCHIPELAGO (Vietnam, operation
from Cac Ba Island by XV8FP in November 1997).

OC-224/Prov YB8 TANIMBAR IS (Indonesia, operation from Yamdena
Island by YC8SHQ/P in September 1997)

Checkpoints are not authorised to accept for IOTA credit QSL cards
confirming contacts made with islands/groups whose Reference Numbers
have been issued on a provisional basis.

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

can you spell hypocrite..yep it's spelled C..A..R..L!!! funny when a no code test internutter gets flamed Carl comes running out, his little squirt gun at the ready, defender of truth, but should a pro code tester state his opinion, Mr Hypocrite is right there telling the poster he's full of shit. Howvere, in stevenson's defense, this writer has noticed that he is consistent with his hypocrisy.

just a musing from....

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Muse on that for a while ...

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a
license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to
hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The
only part of the current generation we are losing on HF is the part that
we could never attract anyway---they are just not interested enough to
become hams. There have always been lots of those people around. The
more things change the more they stay the same. As can be seen, many
people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the
beginners necessary to keep it alive without resorting to effortless
licenses for all comers, we should just let it die a quiet death, as it
naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

There are approx 324 countries currently on the list. As far as the
cards, hang in there, it may take years to get some, others as you
already know come in a few months

check out this site for good info. It's sponsored by the North Jersey Dx
Association

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first

to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

George McCouch wrote in article
...
>
> Eliminating the CW test for HF access is not being addressed at WARC 97
> and is effectively dead for at least the short term, so it looks like the
> status quo will continue.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Dyslexics of the world! Untie!

For those of you who feel insulted by this...too bad. I am slightly
dyslexic myself and if I want to poke fun
I will.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

can you spell hypocrite..yep it's spelled C..A..R..L!!! funny when a no code test internutter gets flamed Carl comes running out, his little squirt gun at the ready, defender of truth, but should a pro code tester state his opinion, Mr Hypocrite is right there telling the poster he's full of shit. Howvere, in stevenson's defense, this writer has noticed that he is consistent with his hypocrisy.

just a musing from....

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Volume 1 Number 181
December 5, 1997
Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first

to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

Yet another list with the M MM MW MD, etc UK calls missing.

No wonder it takes me ages to try to convince W's which country they are
working when I'm operating through the FO birds :>)

They probably still think M1 is San Marino! (It was, back in the 50's
and early 60's).

:-(

A question: how many countries are on the arrl's dxcc list ? I have 125
confirmed,
have worked 155, but i guess i will never get some of those qsl cards.
thanks & 73's

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a
license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to
hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The
only part of the current generation we are losing on HF is the part that
we could never attract anyway---they are just not interested enough to
become hams. There have always been lots of those people around. The
more things change the more they stay the same. As can be seen, many
people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the
beginners necessary to keep it alive without resorting to effortless
licenses for all comers, we should just let it die a quiet death, as it
naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

December 5, 1997
Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

> state his opinion, Mr Hypocrite is right there telling the poster he's
> full of shit.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

can you spell hypocrite..yep it's spelled C..A..R..L!!! funny when a no code test internutter gets flamed Carl comes running out, his little squirt gun at the ready, defender of truth, but should a pro code tester state his opinion, Mr Hypocrite is right there telling the poster he's full of shit. Howvere, in stevenson's defense, this writer has noticed that he is consistent with his hypocrisy.

just a musing from....

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first

to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Ed W7DXZ

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Volume 1 Number 181
December 5, 1997
Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

IOTA

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

Yet another list with the M MM MW MD, etc UK calls missing.

No wonder it takes me ages to try to convince W's which country they are
working when I'm operating through the FO birds :>)

They probably still think M1 is San Marino! (It was, back in the 50's
and early 60's).

:-(

A question: how many countries are on the arrl's dxcc list ? I have 125
confirmed,
have worked 155, but i guess i will never get some of those qsl cards.
thanks & 73's

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point

across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do not feel that ham should die a decent death, rather should evolve as the people feel it should because the spectrum belongs to all the people and not just a bunch of hams, especially those jerks that think they own it and it is theirs alone. Remember, the license granted to the hams is granted by the people, through the government using the FCC to do it. let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part exept that since technology has advanced to the point where it is today, a small portion of each amateur band should be opened up for the no-code technician to experiment on the HF bands. I believe this to be satisfactory since the only real valid arguement for keeping code other than as a method to limit the number of licences, is for the grave emergency senario where a disaster has occurred and someone is touching two sparking wires together to tap out morse code or something as equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a requirement. However, I think it is a wonderful practice, and for those who enjoy it as amateurs, I think they should have areas in the HF spectrum where they can use morse code unhindered and uninterupted. However these same gentlemen should also recognize that there are other people with other desires and should be tolerant of new ideas and usage of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm

and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

From: James Lee Tabor <ku5s@wtrt.net>
Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

> Amor Powers

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first

to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it

and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those

tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

There are approx 324 countries currently on the list. As far as the
cards, hang in there, it may take years to get some, others as you
already know come in a few months

Thanks for reminding us. None of us have a web brower, none of us know about half a dozen contest pages on the internet, none of us ever read the rules of any of the contests, we just turn the radio on and call everybody. What would we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this

part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont stumble into one while trying to snag a rare DX, I dont want to bring down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those
idiots, I probably would have left the hobby just as quickly as I had
entered it.
The problem is that many of these newcomers do not find an elmer and

consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first

to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

There are approx 324 countries currently on the list. As far as the
cards, hang in there, it may take years to get some, others as you
already know come in a few months

check out this site for good info. It's sponsored by the North Jersey Dx

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't

spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the
lowered upgrade rates from that license class tend to validate that
thought. It will be interesting to see what happens to the numbers of this
class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97
and is effectively dead for at least the short term, so it looks like the

status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those
idiots, I probably would have left the hobby just as quickly as I had
entered it.
The problem is that many of these newcomers do not find an elmer and
consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without
anyone telling you what to do" era, they mostly reside between 27 and 28
mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you
gotta do is add a little Code to your memorized written and it's all
yours!"

" No? Not interested in code? Well then, how about we just give you a
license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

December 5, 1997
Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between
14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around
12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished
there Pursian gulf outing yesterday after 15:00Z.
They will be home around 19:00Z on 6 December. QSL
via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5
between 04:00 and 06:00Z. On 14 December he will
be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday
from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage

> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to

> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it

and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those

tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about half a dozen contest pages on the internet, none of us ever read the rules of any of the contests, we just turn the radio on and call everybody. What would we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this

part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont stumble into one while trying to snag a rare DX, I dont want to bring down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

>
I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those
idiots, I probably would have left the hobby just as quickly as I had
entered it.
The problem is that many of these newcomers do not find an elmer and

consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Muse on that for a while ...

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement. The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined quite well by Gary in his posts vis a vis "Incentive (to pass faster and faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in ham radio.

If we organize well enough to overcome the objections of the ARRL and FISTS, there is no doubt that the FCC would have no problem in a single 5 wpm test for all HF access (until the treaty can be changed to let them "off the hook" with the ITU "obligation" ... an "obligation" that some countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first

to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't

spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the
lowered upgrade rates from that license class tend to validate that
thought. It will be interesting to see what happens to the numbers of this
class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97
and is effectively dead for at least the short term, so it looks like the

status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those
idiots, I probably would have left the hobby just as quickly as I had
entered it.
The problem is that many of these newcomers do not find an elmer and
consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without
anyone telling you what to do" era, they mostly reside between 27 and 28
mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you
gotta do is add a little Code to your memorized written and it's all
yours!"

" No? Not interested in code? Well then, how about we just give you a
license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between
14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around
12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished
there Pursian gulf outing yesterday after 15:00Z.
They will be home around 19:00Z on 6 December. QSL
via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5
between 04:00 and 06:00Z. On 14 December he will
be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday
from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage

> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to

> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

Yet another list with the M MM MW MD, etc UK calls missing.

No wonder it takes me ages to try to convince W's which country they are
working when I'm operating through the FO birds :>)

They probably still think M1 is San Marino! (It was, back in the 50's
and early 60's).

:-(

A question: how many countries are on the arrl's dxcc list ? I have 125
confirmed,
have worked 155, but i guess i will never get some of those qsl cards.
thanks & 73's

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it

and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those

tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

>>this is to avoid problems. We don't want any foreign stns to call us,

Thanks for reminding us. None of us have a web brower, none of us know about half a dozen contest pages on the internet, none of us ever read the rules of any of the contests, we just turn the radio on and call everybody. What would we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this

part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont stumble into one while trying to snag a rare DX, I dont want to bring down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those
idiots, I probably would have left the hobby just as quickly as I had
entered it.
The problem is that many of these newcomers do not find an elmer and

consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Ken, the post is inadvertant. However, you must realise that I don't really care if the r.a.dx people are sick of the argument or not, your group is obviously content to swim on in the luke warm waters of the status quo - so you will just have to put up with the odd ripple or two. DO note that the discussions from the policy group are easily identified by their subject headings. This means you are NOT obliged to download them or, for that matter, read them. The choice is yours. Having said that, DO understand that I have no desire to post to your newsgroup, given that dxers seem to possess the debating powers of goldfish. I will endevour to remember to remove the dx address when I reply to this otherwise most interesting thread. God knows why anyone would knowingly post to the fish-bowl anyway.

Regards Ian Gill ZL3TGK

Ian, if you'll pardon the comment, the "proper context" for the
requirement is NOT on rec.radio.amateur.dx. Would you be so kind
as to remove the DX newsgroup from future follow-ups? Many of
us American hams are sick and tired of this discussion and we read
the DX newsgroup for DX news, NOT more CW discussion. Tnx & 73.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13 wpm
and 20 wpm tests (and the caste system of license classes based on those tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can visualize
stating it ... what part don't you understand???)

I am not familiar with any sub-band restrictions that may exist in ZL-land, Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting about are ACTUALLY the "non-SSB bands" and are shared amongst Morse and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of having passed a 13 wpm test, but to be barred from all HF operation in every other mode for lack of a Morse test is absurd, unjustifiable, and IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be

>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a "femto-word
per fortnight" Morse test with testees allowed to have laminated placards with A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap about ham radio to even discuss it at the WRC ... the certainly don't care if we know Morse or not, since THEY don't use it or need Morse operators any more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely within the portion of hams who find it enjoyable. Period, end of story. (Note again that I have NO problem with anyone who enjoys Morse beeping their brains out 24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to their insisting that everyone else practice their brand of "religion.")

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

Yet another list with the M MM MW MD, etc UK calls missing.

No wonder it takes me ages to try to convince W's which country they are
working when I'm operating through the FO birds :>)

They probably still think M1 is San Marino! (It was, back in the 50's
and early 60's).

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)
http://www.systemtechnik.tu-ilmenau.de/ham/hamitupx.html

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

> technician to experiment on the HF bands.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20
to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

<01bd016b$5e5b1d80$LocalHost@ian1>...
> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

> status quo will continue.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Dyslexics of the world! Untie!

For those of you who feel insulted by this...too bad. I am slightly dyslexic myself and if I want to poke fun
I will.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

December 5, 1997
Edited by Bernie McClenny, W3UR

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Muse on that for a while ...

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

> I can see nothing wrong in having Morse Code tests that allow access to
> the voluntary CW sub-bands.

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

There are approx 324 countries currently on the list. As far as the
cards, hang in there, it may take years to get some, others as you
already know come in a few months

check out this site for good info. It's sponsored by the North Jersey Dx
Association

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we
do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe
promise not to call me when I am working the Japan International DX Contest
and
the All Asian Contest. Couple years I would have won both of those if I hadn't
spent half the contest explaining to the Europeans that they were not in
Japan......

Matter of fact, if you'd like to work out some kind of written agreement where
Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch.
Ham radio in the 90's has gotten to be such a friendly hobby. QRZed
DEEEEE-X - if you ain't far away, I don't wanna talk to you..............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the
particular contest we use CQ LA), we definitely do not call stns in
Italy, England, USA etc - it is however little risk of having QRM from
G-stations, they are indeed known as the most decent operators in this
part of the world. It is still possible to work other stns outside the
contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician license was instituted in the early 50s. The codeless technician license adds greatly to this perceived problem. Although the ARRL is beginning to recognize that this is in fact a problem, there are very many who do not perceive it that way. I personally subscribe to the idea that every licensed ham should have some HF privileges in order to be able to experience the full range of amateur radio operations. This was the way the licensing structure was set up before the advent of the Novice and Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this, having come to the conclusion that the price of entry into HF operation is going to continue to be some mastery of CW. IMHO the codless Tech license was designed more to the end of increasing sheer numbers of licensed hams so that activity would increase on VHF / UHF bands which could be potential targets for other services. It may be a broad generalization to say that the average no code Techincian has no interest in CW, but the lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's
liscense, I guess your're stuck pedaling the Schwinn. Most of these
folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs
willing to be elmers. I started as a no code technician and had no desire
to upgrade because I didn't really understand how much fun the other
aspects of amateur radio could be. Fortunately, a couple of local Extras
began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became
so interested in DX'ing that I just had to pursue upgrades. I now enjoy
privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided
my entry into amateur radio as a no code tech. If I had listened to those

idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU.
Many countries' hams would like to abolish these requirements too. In fact,
if you had read the proceedings of the WARC97, you would have noticed its New
Zealand that's leading the charge to remove the international treaty's CW
requirements.

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather

than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to
the voluntary CW sub-bands. I do, however, have serious problems with the
current system of using Morse Code tests to establish access to the phone
bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test.
It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail.
This time it's back to the Pacific Ocean. Plans are to leave Berlin
tomorrow and to make their first stop on 9 December in Vanuatu. They
currently do not know what calls they will use, however they hope to
get something like YJ??IO and YJ??IQ. They will stay there until 16
December then travel on to the Solomon Islands. Some will recall
working Holger from Guadalcanal as H44IO in November/December 1992.
Brigit hopes to get H44IQ. They will leave the Solomons on either 3
or 10 January. If they leave on 3 December they will go back to
Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head
home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between
06:30 and 07:30Z. Later he was on 3504 working the
West Coast of the US around 14:15Z. QSL via
JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from
02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working
Europeans from 07:00 to 08:00Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's
opinion is absurd (that they are "full of shit" as you put it) and stating
that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code
radicals, but I have NEVER, to the best of my recollection, questioned their
right to HAVE or express that opinion, no matter how "full of shit" they were.
(I have asked people to stop spouting falsehoods, but that is rather different
than saying "You have no right to have an opinion on the issues because you
refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to
have or express an opinion, on the basis that "Amor" doesn't post a callsign.
As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or
express an opinion (nor does anyone who thinks that Morse is "better than

sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like
them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate
representations of the postings of no-code-test advocates.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,
they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a

problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

A question: how many countries are on the arrl's dxcc list ? I have 125
confirmed,
have worked 155, but i guess i will never get some of those qsl cards.
thanks & 73's

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

Oops.. actually there are 329 "current" countries on the ARRL list - 320
needed for honor roll.

Righto on the cards, altho some will NEVER qsl, most will and seem to
show up long after you've forgotten the QSO!

Subject: FW: The "Active Beacon Wizard" is here!

Greetings Friends,

You are welcome to download the "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no
configuration.

It is a win95 applet. Consider it a "holiday" gift to the ham world.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Thanks for reminding us. None of us have a web brower, none of us know about
half a dozen contest pages on the internet, none of us ever read the rules of
any of the contests, we just turn the radio on and call everybody. What would
we

do without guys like you reminding us.

But OK. I promise. I won't call you. Now, please make everybody in Europe promise not to call me when I am working the Japan International DX Contest and
the All Asian Contest. Couple years I would have won both of those if I hadn't spent half the contest explaining to the Europeans that they were not in Japan......

Matter of fact, if you'd like to work out some kind of written agreement where Europe and the Pacific never call each other, I'd be glad to sign it........

Don't call me, and I won't call you. Let's not get together and have lunch. Ham radio in the 90's has gotten to be such a friendly hobby. QRZed DEEEEE-X - if you ain't far away, I don't wanna talk to you.............

73, Jim KH2D

P.S. We'll still call you Walt. We consider you part of the Old Country.

It is important to distinguish between CQ, CQDX, CQ JA etc (in the particular contest we use CQ LA), we definitely do not call stns in Italy, England, USA etc - it is however little risk of having QRM from G-stations, they are indeed known as the most decent operators in this part of the world. It is still possible to work other stns outside the contest.

Subject: DX net frequencies?

Hello...de KO4YD, Rex
I have been off the air for over two years, (long story ...having to do
with a direct lightning strike on my tower and how my wife reacted).
Can someone give the the 20mtr. DX net freqencies? (mostly so I wont
stumble into one while trying to snag a rare DX, I dont want to bring
down the wrath of someone I might need to help me later on.)
Thanks...

The only "lost generation" is among those who expect and have grown
reliant on so-called "entitlements." The door is wide open to those
willing to earn their privileges, just as it has always been.

Some may disagree with the requirements, methods and means but, at bottom,
the only folks "excluded" from the HF allocations are those who exclude
themselves.

Amor,

Actually the situation you describe has been occuring since the Technician
license was instituted in the early 50s. The codeless technician license
adds greatly to this perceived problem. Although the ARRL is beginning to
recognize that this is in fact a problem, there are very many who do not
perceive it that way. I personally subscribe to the idea that every
licensed ham should have some HF privileges in order to be able to
experience the full range of amateur radio operations. This was the way
the licensing structure was set up before the advent of the Novice and
Technician grades in the early 50s.

Unfortunately, I do not see a completely acceptable solution to this,
having come to the conclusion that the price of entry into HF operation is
going to continue to be some mastery of CW. IMHO the codless Tech license
was designed more to the end of increasing sheer numbers of licensed hams
so that activity would increase on VHF / UHF bands which could be
potential targets for other services. It may be a broad generalization to
say that the average no code Techincian has no interest in CW, but the

lowered upgrade rates from that license class tend to validate that thought. It will be interesting to see what happens to the numbers of this class license when the FCC begins purging non renewals after 2002.

Eliminating the CW test for HF access is not being addressed at WARC 97 and is effectively dead for at least the short term, so it looks like the status quo will continue. HF privileges are there for those who want to take the time to meet the requirements of entry. This may change in the future, but the reality needs to be recognized, at least for now.

Yep -- and if you can't be bothered with the test for a driver's liscense, I guess your're stuck pedaling the Schwinn. Most of these folks will never "feel" HF unless it's handed to them on a platter.

Read his post ... he's "Amor Powers" and he has an opinion. Nothing more
is required for him to express it and discuss the issues ... despite the
desire of pro-coders to squelch all debate and lobbying for change.

I don't give a damn if he has a license or not ... nor do I care if
"Amor Powers" is his real name or a pseudonym he uses to avoid being
harassed in his personal life because of his views as expressed here.

BTW ... I don't believe *you* are really "Kemosabie" ... I suspect
that you are FAR more likely tonto. (those who speak Spanish will
understand this comment right away)

I think a large part of the problem stems from a lack of amateurs willing to be elmers. I started as a no code technician and had no desire to upgrade because I didn't really understand how much fun the other aspects of amateur radio could be. Fortunately, a couple of local Extras began to "elmer" me along. I was exposed to CW, RTTY and DX'ing. I became so interested in DX'ing that I just had to pursue upgrades. I now enjoy privileges accorded the Advanced class operator.
Unfortunately, along the way, I ran across many amateurs who derided my entry into amateur radio as a no code tech. If I had listened to those idiots, I probably would have left the hobby just as quickly as I had entered it.
The problem is that many of these newcomers do not find an elmer and consequently are not exposed to HF.

No, not really....It's just that in this the "Do your own thing without anyone telling you what to do" era, they mostly reside between 27 and 28 mcs, perhaps as well as VHF-if they are interested in radio at all.

> Most of the new hams are "VHF/UHF only" ops. They aren't getting the

Oh well, we should beg and plead with them:

"Hey guys, look what we have here--good old HF propagation! All you gotta do is add a little Code to your memorized written and it's all yours!"

" No? Not interested in code? Well then, how about we just give you a license without ANY more testing and let you operate?"

"NO, still? why not?"

"You say you want a free rig too! Sorry, we don't have any of those to hand out. Not interested? Why?" "You already have The Internet! Oh."

> The implications of this will not intirely be felt for another 15 to 20
> years.

The implications of this *could* be felt right now if it were true. The only part of the current generation we are losing on HF is the part that we could never attract anyway---they are just not interested enough to become hams. There have always been lots of those people around. The more things change the more they stay the same. As can be seen, many people who *are* interested work both the internet *and* HF ham radio.

If or when the day arrives that HF ham radio cannot attract the beginners necessary to keep it alive without resorting to effortless licenses for all comers, we should just let it die a quiet death, as it naturally should.

I wonder where you heard this information? Its totally bogus. The ARRL had

very little to do with the setting of CW operator requirements with the ITU. Many countries' hams would like to abolish these requirements too. In fact, if you had read the proceedings of the WARC97, you would have noticed its New Zealand that's leading the charge to remove the international treaty's CW requirements.

can you spell hypocrite..yep it's spelled C..A..R..L!!! funny when a no code test internutter gets flamed Carl comes running out, his little squirt gun at the ready, defender of truth, but should a pro code tester state his opinion, Mr Hypocrite is right there telling the poster he's full of shit. Howvere, in stevenson's defense, this writer has noticed that he is consistent with his hypocrisy.

just a musing from....

---------- I am in my 50's and returned to Ham after 40 years last

year. In a few months I went from no-code to Tech.plus and then a few weeks later to General. Getting close to Advanced. No Elmer involved. I detected a distinct difference in attitude towards me at the club when I reached General class.

While I still advocate for code I have softened after listening to various points of view/postings on this subject in various forums. There is reasonable argument for both points of view. Aside from any practical points to be made as to whether or not code requirement helps for this-or-that reason

I am also interested in its requirement for sake of tradition and a form of "uniqueness" required to be in the brotherhood of being a Ham.

The comments made about modern evoving hobby and thus not a need for code is also worthy of consideration. I hope others will keep an open mind rather than just trying to promot their preconceived opinion.

Here's hoping we can reach a reasonable foundation to further the hobby and its survivabilitgy.

The treaty requirement has to be looked at in its proper context. It forms the basis of an historic attempt to formalise a successful international standard intended to prevent the amateur bands from plunging into chaos at a time when CW predominated. Given the current status of CW internationally it is only a matter of time before individual countries realize that there will be no serious consequence suffered if they decide to ignore the treaty clause. It would be nice to think that the world could come to an agreement to abolish the requirement, but given the amount of debate that has been devoted to the subject over the years without achieving anything like a consensus I think the next move will be to ignore the clause altogether.

I can see nothing wrong in having Morse Code tests that allow access to the voluntary CW sub-bands. I do, however, have serious problems with the current system of using Morse Code tests to establish access to the phone bands.

> I suppose the US can lower all license class's to 5 WPM and still be

Yes the United States could meet the treaty required with a 5 WPM test. It could also ignore the requirement altogether without consequence.

Headlines

Holger, DL7IO, and Brigit (YL), DL7IQ, once again hit the DX trail. This time it's back to the Pacific Ocean. Plans are to leave Berlin tomorrow and to make their first stop on 9 December in Vanuatu. They currently do not know what calls they will use, however they hope to get something like YJ??IO and YJ??IQ. They will stay there until 16 December then travel on to the Solomon Islands. Some will recall working Holger from Guadalcanal as H44IO in November/December 1992. Brigit hopes to get H44IQ. They will leave the Solomons on either 3 or 10 January. If they leave on 3 December they will go back to Vanuatu (YJ) for a week. On 12 January they go to Fiji and then head home. No operation is expected from Fiji.

While on this trip to two plan to take a Yeasu FT-890, a 3 element beam, a R7 Vertical and dipoles. Lyndon, VE7TCP, is helping by providing a log search engine at http://ve7tcp.ampr.org/cgi-bin/dl7io It is not up yet but expected soon. Plans are to upload the logs on a daily basis. QSL cards may go either direct to Fritz Bergner, DL7VRO, Sterndamm 199, D-12378 Berlin, Germany or the preferred way is to send an e-mail request to DL7VRO@aol.com

Yannick, F6FYD, is currently stationed in New Delhi, India and will travel to Azerbaijan on 23 December. Look for him to use 4J0FR until 6 January. QSL via F6AJA.

Ken, K4ZW, is currently on a work assignment in Amman, Jordan and is operating on the low bands during his sunrise and sunset windows. He put up a 160 meter slopper however the noise level does not seem to drop below S-8. He has been showing up on 160 and 80 meters around 20:00Z looking for Europe. He says "I'll continue to look for the US on the low bands at least one hour before my sunrise at 04:24Z." Ken plans to be off the next two days and may be on 10, 15 and 20 meters during US mornings.

Alain, F2HE, will be active again from Saintes Island (IOTA NA-114) as FG/F2HE from 1 to 15 February. QSL via F6LQJ.

Gerard, F2JD/HP1XBI, plans to leave Panama on 16 December and return to his homeland France. He may go back to Panama in January. QSL via F6AJA.

Ralf, DL2FDK, will be in Thailand signing HS0/DL2FDK until 19 January, 1998. Look for him to be active on 10 through 40 meters on SSB and RTTY. QSL via DL2FDK.

QSN

3W5FM - VIETNAM - Has been showing up at 23:30Z between 14010 and 14015. QSL via UA0FM

5A2A - LIBYA - The German boys left yesterday around 12:00Z. QSL via DL3KDV.

A4 - OMAN - David, A4/K3LP, and Rich, A4/KE3Q, finished there Pursian gulf outing yesterday after 15:00Z. They will be home around 19:00Z on 6 December. QSL via W3UR.

C56/JA1OEM - THE GAMBIA - Mako has been showing up on 1824.5 between 04:00 and 06:00Z. On 14 December he will be in Mali signing TZ6HP. QSL via JA1OEM.

JL1KFR/JD1 - MINAMI TORISHIMA - Ryo was found on 21011 yesterday from 21:30 to 23:00Z working stateside.

JR0BQD/JD1 - OGASAWARA - Satoshi showed up on 10103 between 06:30 and 07:30Z. Later he was on 3504 working the West Coast of the US around 14:15Z. QSL via JR0BQD.

VU2JBK - ANTARCTICA - Shows up between 14180 and 14190 from 02:00 to 04:00Z.

YJ8UU - VANUATA - Has been showing up on 18142 working Europeans from 07:00 to 08:00Z.

ZK1DI - SOUTH COOKS - Gunter was found on 3800 from 07:20 to 07:50Z.

Steve ... please read this slowly and carefully ...

There is a BIG difference between expressing the opinion that someone else's opinion is absurd (that they are "full of shit" as you put it) and stating that
they have no right to have or express that opinion.

I have disputed the veracity and validity of the opinions of many pro-code radicals, but I have NEVER, to the best of my recollection, questioned their right to HAVE or express that opinion, no matter how "full of shit" they were. (I have asked people to stop spouting falsehoods, but that is rather different than saying "You have no right to have an opinion on the issues because you refuse to reveal you callsign or maybe you don't even have one.)

The writer who I challenged in the previous post challenged "Amor's" right to have or express an opinion, on the basis that "Amor" doesn't post a callsign. As I pointed out, "Amor" doesn't NEED a callsign to have a right to have or express an opinion (nor does anyone who thinks that Morse is "better than sex.")

There was, therefore, NO hypocrisy in my post, just facts (whether you like them
or not is irrelevant.)

> Howvere, in stevenson's defense, this writer has noticed
> that he is consistent with his hypocrisy.

This writer has noticed that Steve is consistent with his inaccurate representations of the postings of no-code-test advocates.

Why only a small portion? (Especially in light of the fact that most
of the priveleges afforded by passing a code test at 13 wpm/20 wpm have
ABSOLUTELY NOTHING to do with Morse code operation?)

> I believe this to be
> satisfactory since the only real valid arguement for keeping code other
> than as a method to limit the number of licences,

Why in God's name would anyone but a dog-in-the-manger, I've got mine so
you all can get screwed type WANT to "limit the number of licenses?" (Please
note that our bands are GROSSLY underutilized, even during "busy" times.)

> is for the grave
> emergency senario where a disaster has occurred and someone is touching
> two sparking wires together to tap out morse code or something as
> equally dismal as that.

That scenario is so vanishingly unlikely as to not merit consideration.
Many orders of magnitude more people could be saved *every year* by requiring
all hams to pass a Red Cross Basic First Aid Course and CPR certification
than have been saved by Morse code *in the entire history of ham radio.*

> I do not believe any other arguement to keep morse code is valid as a
> requirement.

THOSE arguments are not valid ... however,

> However, I think it is a wonderful practice, and for those
> who enjoy it as amateurs, I think they should have areas in the HF
> spectrum where they can use morse code unhindered and uninterupted.

I agree that all hams should be permitted to *use* Morse if they see
fit to do so on a voluntary basis ... if is forcing it on everyone that
is objectionable and unjustified.

I am a staunch advocate of eliminating the code test for access to HF,
but would never advocate or support a ban on the voluntary use of Morse
by anyone anywhere in the ham bands. I have even suggested that the
lower 25 kHz of ALL HF bands be set aside as "Morse only" ... note that
the only "Morse only" bands in the current US band plan are small slivers
at the lower end of the 6m and 2m bands where code testing is NOT required.
Thus, I have supported the establishment of "Morse preserves" where none
now exist. (What most rabid beepers think of as "their CW bands" are
ACTUALLY shared with RTTY and all other forms of digital communications,

they are NOT exclusively for Morse.)

> However these same gentlemen should also recognize that there are other
> people with other desires and should be tolerant of new ideas and usage
> of the amateur spectrum by amateurs.

Tolerance for those who don't view Morse as an idol to be worshiped with
blind faith and total allegiance is NOT a "strong suit" amongst the more
rabid pro-coders here ... decades of that attitude have stirred strong
feelings against that mentality in some of us. However, that does NOT
mean, as the pro-coders would have you believe, that we (really) seek
to eliminate Morse usage or ban Morse from the bands (or any part thereof.)

I am not familiar with any sub-band restrictions that may exist in ZL-land,
Ian, but here, the ONLY "Morse ONLY" sub-bands are small slivers at the
bottom of 6m and 2m, where no code test is required at all.

The (so-called) "CW bands" which you hear the rabid beepers ranting
about are ACTUALLY the "non-SSB bands" and are shared amongst Morse
and all of the digital modes.

> I do, however, have serious problems with the
> current system of using Morse Code tests to establish access to the phone
> bands.

I would have no problem in forgoing Morse operation in the absence of
having passed a 13 wpm test, but to be barred from all HF operation in
every other mode for lack of a Morse test is absurd, unjustifiable, and
IMHO exceedingly discriminatory.

> > I suppose the US can lower all license class's to 5 WPM and still be
> > within the ITU treaty. I could go either way. Personally don't have a
problem
> > learning 13 WPM, or even 20.
>
> Yes the United States could meet the treaty required with a 5 WPM test.

The US (or any other country) could meet the treaty requirement with a
"femto-word
per fortnight" Morse test with testees allowed to have laminated placards with
A = ,_ B = _... etc. printed on them. There is NO speed requirement at all in
the ITU treaty.

> It could also ignore the requirement altogether without consequence.

Agreed ... the governments of the world don't generally give enough of a crap
about ham radio to even discuss it at the WRC ... the certainly don't care if
we know Morse or not, since THEY don't use it or need Morse operators any
more.

Morse's "value" (if it indeed has ANY) is PURELY recreational and purely
within
the portion of hams who find it enjoyable. Period, end of story. (Note again
that I have NO problem with anyone who enjoys Morse beeping their brains out
24 hrs/7 days/52 weeks a year until the damned sun goes nova, I only object to
their insisting that everyone else practice their brand of "religion.")

Subject: Prefix List

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

Date: Wed, 03 Dec 1997 22:56:16 GMT
From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

Yet another list with the M MM MW MD, etc UK calls missing.

No wonder it takes me ages to try to convince W's which country they are
working when I'm operating through the FO birds :>)

They probably still think M1 is San Marino! (It was, back in the 50's
and early 60's).

:-(

A question: how many countries are on the arrl's dxcc list ? I have 125
confirmed,
have worked 155, but i guess i will never get some of those qsl cards.
thanks & 73's

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper
one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some
countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem
learning 13 WPM, or even 20.

All the M1 and M0 calls (issued in the United Kingdom since April
1996) have been omitted from the 1998 Flying Horse CD-ROM!

You missed some prefixes (also very common ones) such as:
3Z, HF for Poland
Mx same as Gx (England etc)
C4, P3 Cyprus (very acitve in contests)
Germany is DA-DR. Prefix DN will be issued starting next year.
DS,DT is South Korea

Just some countries picked out. A complete prefix list can be viewed
at (just one of many sites)

From: LA8AK@online.no (J M Noeding)
Subject: 80/40m CW test/LA

This week-end we have a national cw contest
It is only for LA, LB, JX, JW (3Y) stations. The reason for mentioning
this is to avoid problems. We don't want any foreign stns to call us,
it makes only QRM, but unfortunately condx are better to south Europe
than in this country.
6/12 : 13-15 and 21-23 GMT,
7/12: 07-09 and 13-15 GMT
3510-3560 and 7010-7040kHz
My callsign in the contest: LA8AK/K (8ak/k)
County K for WALA

From: "Amor Powers, Radio"
Subject: Lost: Generation of HF Operators

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the
experience of HF methods and technology, and the "mechanics" of an HF
station and the "feel" for propagation and international contacts.
The implications of this will not intirely be felt for another 15 to 20
years.

This is an interesting discussion, a topic that I am interested in,
however I always note that soon after the discussion starts as a proper

one, a bunch of jerks jump in who dont know how to get their point
across any other way than to insult.
Be that as it may, I will say that I agree with the original poster, do
not feel that ham should die a decent death, rather should evolve as the
people feel it should because the spectrum belongs to all the people and
not just a bunch of hams, especially those jerks that think they own it
and it is theirs alone. Remember, the license granted to the hams is
granted by the people, through the government using the FCC to do it.
let the people speak.
Therefore, I will.
It is my opinion that the the code element should stay for the most part
exept that since technology has advanced to the point where it is today,
a small portion of each amateur band should be opened up for the no-code
technician to experiment on the HF bands. I believe this to be
satisfactory since the only real valid arguement for keeping code other
than as a method to limit the number of licences, is for the grave
emergency senario where a disaster has occurred and someone is touching
two sparking wires together to tap out morse code or something as
equally dismal as that.
I do not believe any other arguement to keep morse code is valid as a
requirement. However, I think it is a wonderful practice, and for those
who enjoy it as amateurs, I think they should have areas in the HF
spectrum where they can use morse code unhindered and uninterupted.
However these same gentlemen should also recognize that there are other
people with other desires and should be tolerant of new ideas and usage
of the amateur spectrum by amateurs.

George McCouch wrote in article
...
>
> Eliminating the CW test for HF access is not being addressed at WARC 97
> and is effectively dead for at least the short term, so it looks like the
> status quo will continue.

This does not "have to be" ... the ITU treaty specifies NO speed requirement.
The 13 wpm and 20 wpm "requirements" were cooked up by the ARRL as outlined
quite well by Gary in his posts vis a vis "Incentive (to pass faster and
faster
Morse tests) Licensing" for the purpose of emphasizing Morse over all else in
ham radio.

If we organize well enough to overcome the objections of the ARRL and
FISTS, there is no doubt that the FCC would have no problem in a single
5 wpm test for all HF access (until the treaty can be changed to let them
"off the hook" with the ITU "obligation" ... an "obligation" that some

countries have "taken exceptions to.")

Ed, the treaty requires a demonstrated knowledge of Morse Code. The level of proficiency has been set by each country_s licensing authority. Given the nature of your bizarre _incentive| system I_d say the ARRL had heaps to do with setting US. requirements. As for NZ leading the Morse Code test removal charge I guess we have a history of doing things like that - first to give women the vote, leading the world with economic reform, excellent dairy marketing, and... oh... we_ve got the America_s Cup too. Damn we_re good.

Dyslexics of the world! Untie!

For those of you who feel insulted by this...too bad. I am slightly
dyslexic myself and if I want to poke fun
I will.

part 2. if anyone has any QSL information
on the station's on my list,please let
me know. As you can see by the
dates of the QSO's, they were some
time ago, i was only a kid at the
time. i hope some of the stations
are still around. well it's worth a try.
thank's and 73's.............

Read what I said ... the ITU treaty specifies NO speed requirement. The 13
wpm
and 20 wpm tests (and the caste system of license classes based on those
tests)
were the product of the ARRL's "Incentive (to pass faster and faster Morse
tests)
Licensing" initiative. (That is factual, clear, and concise as I can
visualize
stating it ... what part don't you understand???)

Ian, well, as you said, the Treaty requires a demonstrated knowledge of
Morse Code... (officially or unofficially? deemed to be 5 WPM), so there still

must be a world ITU agreement before we can abolish this requirement.

As for the US requirements and ARRL, I agree that the ARRL had a large part
in setting our license CW speed requirements, and I really don't see much at
fault there. The small slivers of spectrum available to only the Extra class
don't really make that much difference to the rest of the hams, I would think.

Personally I don't have a problem with our 13WPM level for General class
either.

I suppose the US can lower all license class's to 5 WPM and still be within
the ITU treaty. I could go either way. Personally don't have a problem

learning 13 WPM, or even 20.

SB DX @ WW $OPDX.334
Ohio/Penn DX Bulletin No. 334

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 334
BID: $OPDX.334
December 8, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2KKZ, W3LEO, N4GN, K6RIM, K8RF, N0TG, N0AH, DL2HEB, DL7IO, DL7RAG, DU9RG, F6AJA & LNDX, G3SXW, G4BUE & DX News Sheet, G0ULN, LA6WEA, OH2KI, ON4BDS, TU5EX and ZS6PHD for the following DX information.

3B6, AGALEGA and ST. BRANDON. The "DX News Sheet" reports that Dov, 4Z4DX, and others will be active from this rare spot in May, 1998, as 3B7AZ and 3B7/HB9JAI.

3D2, FIJI. Hide, JM1LJS, is making an early announcement of his upcoming trip here in the new year. His activity will take place April 30th, through May 7th (of 1998) as 3D2LJ. Operation will be all bands including the WARC bands. QSL via home call.

4G, PHILIPPINEGS (Special Event). The special callsign 4G50N (4GfiftyN) was issued to ACES (Amateur Communications and Emergency Service Club) of Naga City, Philippines, to celebrate Naga City's 50th charter anniversary. This call will be in use from January 1, 1998, to March 31, 1998. QSL via DU9RG's new address: Robin U. Go, 818 Acacia Avenue, Ayala Alabang Village, 1780 Muntinlupa City, Philippines.

9M8, EAST MALAYSIA. The "DX News Sheet" reports Peter, PB0ALB, is planning to be active again for six weeks in April/May of 1998 as 9M8CC. Activity will be from Serian, 50 miles from Kuching, Sarawak. Operations will be on all bands. QSL via home call.

C5, THE GAMBIA. Lee, G0ULN, reports to OPDX that he will be here from December 19th to January 9th (1998). He will be on holiday in Gambia, but has received permission to take his H.F. radio with him. He will be signing C56/G0ULN, unless he is able to get a local call then it might be C56LE. Lee will be active daily around 14200 kHz and 21200 kHz (+/- QRM), on SSB only. He will be using an Icom 706 and a 1/2 size G5RV. QSL is via Lee Fuller, PO BOX 803, Hull, England, HU7 4BY.

DU100, PHILIPPINEGS (Special Event). Look for this special prefix to be used during the whole year of 1998 to celebrate the Philippines' 100th year of independence.

FG, LES SAINTES ISLAND. Alain, F2HE, will once again be active as FG/F2HE from this French Guadeloupe island (IOTA NA-114) between February 1-15th.

FT5X, KERGUELEN ISLAND. The French LNDX reports Helios, F6IHY, has left Reunion on the boat "Marion Dufresne" (ed. GEEE! Where did I hear that name before?). He will stop at Crozet Island from December 6-9th, without doing any radio activity. Helios will, however, arrive at Kerguelen on December 12th. He will use the FT5XN callsign for 6 months. He will use an IC-730 with a vertical and dipole. His suggested frequencies will be: SSB - 14209, 21209/309, 28509, 18159, 24959 and CW on request. QSL via F6PEN via bureau.

FT5Z, AMSTERDAM & ST. PAUL ISLAND. Eric, FT5ZG, has been showing up on 20 meters around 14278 kHz between 1500 and 1630z. Sometimes there is a list operation being taken by F5PFP. QSL via F5RQQ.

HP, PANAMA. You have little over a week left to work Gerard, F2JD/HP1XBI, before he leaves Panama on December 16th. He will go back to France, but he may be returning to Panama in January.

IOTA NEWS.....
David, ON4BDS, informs OPDX that his job will be taking him to Umea, Sweden, in early February, 1998, and he will stay there until the end of July. Off the coast of Umea, in the Gulf of Bothnia, there are two IOTA island groups, EU-135 Holmon island in SM, and EU-101 Norrbyskar in OH6-land. David states he just can't resist and will activate them both. Look for SM/on4bds/P and OH6/on4bds/p on the usual IOTA frequencies during the weekends. He has no clue when he will be active, and how much time he will spend on each island. He knows for sure that he will activate both groups for at least a weekend, but if the pile-ups are good, he will spend more weekends there. David will announce any planned operations a few weeks in advance. He will be taking his TS-50 with his switched-mode power supply and a FD4 wire antenna. He mostly works SSB, but if you want a CW QSO, don't hesitate to ask. QSLs are preferred through the bureau via his home callsign, or direct to David Steeman, Kapelweg 11, B9200 Dendermonde, Belgium (CBA).

Ulli, DL2HEB, will use the callsign OZ/DL2HEB/p from Roemoe Island (EU-125) in the Danish Northsea Group (This island is actually well known because of the many stranded whales!). He will be active from December 19th through January 2nd (1998). Operations will be on 80-10 meters. He will only use CW and the "modern digital modes" (Amtor, Pactor I/II). All will be done by QRPower, maximum 4 watts. Check the IOTA and QRP frequencies, especially on CW, 14040 and 14060 kHz. QSL to his homecall DL2HEB via the bureau.

J7, DOMINICA. Bob, W2KKZ, will be operating from here March 1-8th (1998). He will be active for only part of the ARRL DX SSB Contest that weekend. He plans to be on 80-10 meters CW and SSB. He expects to be using the

J7/W2KKZ callsign. QSLs go to the home call direct or via the bureau. He will QSL 100 % via the bureau shortly after his return.

K3VOA (Rare Section in the 10 Meter Contest). The Potomac Valley Radio Club (PVRC), thanks to the hospitality of the Voice of America Amateur Radio Club, will again activate K3VOA for the rare DC Section multiplier in the ARRL 10 Meters Contest December 13-14th. The multi-operator team (W3LEO, K3IXD, KD4QVT, N3NT, and WB3ECU) will be active on both CW and SSB. QSLs for this contest only go to W3LEO [ex KA3TGY], CBA, SASE please.

LA, NORWAY (80 meters). Ken, LA6WEA, reports to OPDX that there are hardly any times available during the winter season that LA stations can work the U.S. stations during their sunrise. He states, "We up here in the north (66.09N) are now in the greyline or darkness 24 hours." Ken mentions that he will be active almost everyday from 1100-1500z along with a couple of other Scandiavian stations too. So, look for them around 3780-3799.9 kHz.

NEW OFFICERS/DIRECTORS.......
The Redwood Empire DX Association (REDXA), in Petaluma, CA, recently held an election of officers and directors. The new officers and directors, who will assume office in January, 1998, are: President - K6RIM, Al Burnham; Vice President - N6AD, Wally Pugh; Sec/Treasurer - WA6IKQ, Jim Selmi; Director - K6ANP, Len Giraldi; Director - N6YEU, Fred Leoni; and Director - N6OJ, Chuck Ternes.

The Mile High DX Association has elected the following officers: President - Don McCoy, W0DM; Vice President - Bill Leahy, K0MP; and VP/Treasurer - Greg Dunn, W0ZA.

HEADED TO THE PACIFIC. Northern Ohio DX Association (NODXA) members and very good friends Holger, DL7IO, and Brigit, DL7IQ, will once again head back to the Pacific Ocean. This will be mainly a holiday/vacation trip. Holger states this is the first time in 8 years that Brigit and he will be going on a trip without their good ham radio friends. (Holger... Only she and me...) By the time you read this, Holger and Brigit, will be on their way to Vanuatu and should be there by December 9th. Currently they do not know what their callsigns will be. However, Holgers hints they hope to get something like YJ??IO and YJ??IQ. Their activity will last until December 16th, and then they will travel to the Solomon Islands (H44). Holger will be active again as H44IO (many may remember his activity in late 1992 along with his friends Tom and Frank) and Brigit is hoping to get H44IQ callsigns. Their stay on the Solomons will last only until January 3rd (or possibly the 10th). If they leave the Solomons on January 3rd, they will return to Vanuatu for another week. If they end up leaving the Solomons later, they will head to the Fiji and then home on January 12th. There will be no operation from Fiji. The equipment to be used on this trip are a Yeasu FT-890, 3 element beam, R7 Vertical and dipoles. Holger mentions that Lyndon, VE7TCP, will be providing a log search engine on the WEB for them during their activity. They will be able to upload their logs on a daily basis, and you should be able

check out your contacts at: http://ve7tcp.ampr.org/cgi-bin/dl7io
QSL direct to DL7VRO, Fritz Bergner, Sterndamm 199, D-12378 Berlin, Germany, or the preferred way, which is via Bureau. Bureau requests can also be obtained by sending an E-mail message to Fritz's InterNet address: dl7vro@aol.com

QSL INFO AND NEWS......
QSLs for the TU3F special callsign must be sent to F6AXP. This is for all QSOs made on CW/SSB/RTTY by the TU3F Team during the period of November 23rd through December 3rd.

Ron, AC7DX, was announced as QSL Manager for the 1998/99 SSIDXG Bouvet (3Y) operation.

QSLs for VK9LX go to Nick, VK2ICV. PLEASE NOTE: Nick's address is NOT correct in callbooks before 1998 !!!!!! So PLEASE QSL Via: Nick Hacko, PO BOX 730, Parramatta 2124 NSW, Australia. The VK9LX operation made 500 QSOs on 160 meters and a total of 13000+ QSOs on all bands. OPDX InterNet Subscribers will receive an additional bulletin containing the "VK9LX Summary" by K8RF.

On November 9th, the South African Radio League launched a WEB site at: http://www.sarl.org.za. This WEB site has the "Southern African Call Book" online. The callbook contains entries for South Africa (ZS), Lesotho (7P), Swaziland (3DA), Namibia (V5), Botswana (A22), Mozambique (C9), Tanzania (5H), Zambia (9J2) and Zimbabwe (Z2). The direct URL address is: http://www.sarl.org.za/callbook.htm

QSLs for TF3IRA. There seems to be some confusion on where to QSL this station. The correct method for QSLing TF3IRA is directly VIA THE CALL BOOK ADDRESS (and NOT, repeat not N4GN). You may also QSL via the bureau if you wish. TF3IRA is the club call for the Iceland IARU society. Eventhough Tim, N4GN, was active during last week's contest from the TF bureau, which just happens to be located in the very same room as the Iceland IARU station, he is not the QSL Manager. However, Tim, N4GN, is handling his own cards from the TF/OH4GN operation. Please send those cards to Tim's address in the U.S. at: 8309 Dawson Hill Road, Louisville, KY 40299-5317, U.S.A.), or via the bureau.

Tim, N4GN, reports that the OJ0/N4GN and OH0/N4GN cards are not yet out. He states, "If I ever get back to Kentucky, I'll get that done. I'm still hoping for some time over the holidays. Tnx for your patience."

QSLs for ZB2X during the CQWW CW Contest go to OH2KI: Jorma Saloranta, Karhutie 39, 00800 Helsinki, Finland.

Roger, G3SXW, would like to remind everyone about the QSL route for 5V7A which was active in the 1997 CQ WW CW contest. QSL via GM4FDM. NOT via G3SXW and NOT via GM4AGL (who are doing the 5V7A 1996 contacts). A flood of cards are already arriving at these two addresses and need to be forwarded to GM4FDM. Send only direct to:

Tom Wylie, GM4FDM, 3 King's Crescent, Elderslie, Renfrewshire,
PA5 9AD, Scotland. Requests for bureau replies may be sent to Tom
by E-mail at: wylie@sol.co.uk -- Already Tom has received over 100
such E-mail requests. More are encouraged. QSL cards are being
printed this week and direct replies will start to flow by December
15th.

Heinz, DL7RAG, states he has been receiving a lot of direct QSL
cards for ZF2RA (from CQWW DX CW 97 Contest). He reports that he
is NOT the QSL Manager for ZF2RA. Please QSL ZF2RA via K7AR. Heinz
is the QSL Manager for: 5W0HW, ZK1RAG, ZK2RA, 3D2/DL7RAG, DL7RAG/SV9.
He also mentions that you don't have to send a card, he automatically
sends a QSL for every contact via the bureau.

VP5, TURKS & CAICOS ISLANDS. Randy/N0TG, Murry/WA4DAN, and Ronald/AA4VK
will all be operating as /VP5 from January 16-23rd. Emphasis will be on
CW with activity on all bands including WARC bands. All QSLs will be
via N0TG.

XQ0, SAN FELIX. John, CE0ZAM, will be active from this rare Chilean island
for about 20 days in 1998. Activity is planned to take place in April/May,
and he will use the callsign XQ0X. Operations will be CW/SSB on all bands.

-=-
IMPORTANT NOTICE! Users of the online BARF-80 BBS (Home of the OPDX
Bulletin) take note, the area code has changed as of August 16th. The new
440 area code will replace the 216 area code. Currently both area codes
can be used, but the 216 area code will be permanently replaced in April,
1998. BARF-80 BBS online at 440-237-8208 28.8k-1200 Baud 8/N/1

In article <01bd021a$c3048320$LocalHost@ian1>,
Ian Gill <ian@minidata.co.nz> wrote:

>Ken, the post is inadvertant.

I'd instead call it neglect. In "rn" the poster is told twice which newsgroups his article will appear. Just like Carl, you apparently believe the more noise you create, the more newbies will hop aboard your wagon.

Here in the US, Ian, we have several rec.radio.amateur speciality newsgroups: .dx, .boatanchors, .antenna, .homebrew, .space, .digital, .misc, .equipment, and of course .policy (which was created especially to take the code debate off the other speciality groups). This is all outlined in the r.r.a charter. Feel free to use them, but in exchange, abide by the charter.

>However, you must realise that I don't really care if the r.r.a.dx people
>are sick of the argument or not,...

Yes, go ahead and ignore the charter. Hopefully you're better behaved on the air than you are on the newsgroups.

>your group is
>obviously content to swim on in the luke warm waters of the status quo

You bet - and we're having a ball!

>discussions from the policy group are easily identified by their subject
>headings. This means you are NOT obliged to download them or, for that

Whatever method you use to read news, does not imply we all use that same method. On the UH-UNIX network here, I type "rn dx" to read this group - and sure enough, there sit your code/nocode comments because you failed to delete .dx in the header. "Then don't read them" you say? Then tell me why we should bother to have a dozen speciality groups. Why not have one massive NG encompassing any and all topics?

> given that dxers seem to possess the debating powers of goldfish.

DX envy, Ian? Study your code so you can get an HF license.

I sell the following amplifiers HF, all under perfect conditions.
Ampli Collins 208U10, autotuning 2-30 Mhz, 10 Kw continues, with exciter Redifon/Harris.
3 Ampli Siemens, autotuning 1.5-30 -Mhz, 10 Kw continues, Siemens.
Ampli Collins 205J3 new, modified by the Collins 45 Kw pep, autotuning 2-30 Mhz.
1 Ampli Harrises 84V, 13 Kw cw.
4 Antennas Log periodic 2-30 Mhz 10-50 kw.
I have cable, connectrors, end more.
They take an interest you write me.

>DX envy, Ian?

No, I don't think so, Jeff. I routinely talk internationally using Internet voice systems and in doing so I readily enjoy conversations more stimulating than I hear on 20M.

>Study your code so you can get an HF license.

I actually don't think you are entitled to order me to do anything, Jeff.

> I'd instead call it neglect. In "rn" the poster is told twice which
> newsgroups his article will appear.

Well, my news reader does not have that facility. Even if it did I would still want to reply to all the news groups listed because I have no way of knowing where the post I am replying to originated from.

> Just like Carl, you apparently
> believe the more noise you create, the more newbies will hop aboard
> your wagon.

Well, Jeff, don't give up your day job because you need to spend a bit more time on the clairvoyancy.

> Here in the US, Ian, we have several rec.radio.amateur speciality
> newsgroups: .dx, .boatanchors, .antenna, .homebrew, .space, .digital,

> to take the code debate off the other speciality groups). This is all
> outlined in the r.r.a charter. Feel free to use them, but in exchange,
> abide by the charter.

When you stop posting to me I will stop replying to you - simple. But, until then, remember you are currently operating in the international public domain - a place where you personally don't have a lot of sway.

> Yes, go ahead and ignore the charter. Hopefully you're better behaved on
> the air than you are on the newsgroups.

Jeff, I am perfectly entitled to reply to any posting at the place that it may have originated. If you don't like the fact that a particular subject has surfaced in your favorite group then I suggest you track down the original author and take issue with him or her for addressing it so widely. However, the subject of my radio operating standard is a matter between myself and my government - nothing really to do with you so, go slither back into you bowl.

> Whatever method you use to read news, does not imply we all use that same
> method. On the UH-UNIX network here, I type "rn dx" to read this group -

T48RCT and T49C
The Swedish-Cuban expedition is concluded with about 14 000 contacts. All logs have been uploaded to Sweden but due to a computer problem have not yet been available at the QSL Server. We hope to sort out the problem in one or two days. Using the QSLs Online concept, you may then download your cards directly from http://ham.te.hik.se/clubs/sk0ux (or search for T48RCT or T49C on the Altavista). Many hams have already done so and thanks for all the positive comments.

Our unusual grid square (locator) was FL11SG.

The other QSL route is via SK0UX, address SE-186 91 VALLENTUNA, Sweden, or via the Swedish bureau.

>Jeff KH2PZ / KH6

No, it is not the reflector's fault. The brain dead software is at
ohmeda.boc.com. It is bouncing all mail to one jos.vangelder
back to the sending host, which in the case of this group's
digests is the ucsd.edu reflector, with full content quoted.
And it is bouncing it to the *posting address* of the reflector.
So all the bounced digests get posted again, just as any other
post addressed to the posting address does. That then gets
digested, mailed to jos.vangelder again, and stupidly
bounced back to the posting address by ohmeda.boc.com
again in an endless loop.

If you want to stop this nonsense, forward all these bounced digests
to postmaster@ohmeda.boc.com or abuse@ohmeda.boc.com
with a strongly worded note to fix their brain dead mailer.

Hi George, the treaty does not prevent the FCC from changing the speeds
of the Morse code tests. The general Morse code test could immediately
be
lowered to 10wpm or even 5wpm and still be perfectly treaty-legal.
The Morse code flag and the IARU treaty flag are simply diversions so
no-code-test folk will attack the flags instead of the problem.

Hey Ian, stop removing the "Followup-To: rec.radio.amateur.policy"
line I place in the header. I'm trying to get this thread off of
.dx, but you keep defeating my efforts. Bad boy. Continue to do
this, and we'll make New Zealand the 51st state of the U.S. (Then
we'll homeport some of our nuclear-powered ships in NZ harbours.)

I can send you a copy of the rec.radio.amateur.* charter if you'd
like; reading it might help you better understand the purpose of each
of these speciality groups.

73,
Jeff KH2PZ / KH6

(as long as the header isn't altered, any followup will appear
only on r.r.a.policy)

Are you suggesting that if a site receives a misaddressed email,
it shouldn't bounce the entire email back to the sender?
One of the beauties of internet email is that this *does* happen.

The fault lies with the listserver software at ucsd.edu. Other
reflectors sense bounced articles and forward them to the list-
owner for action, rather than taking a such an article and publishing
it as a "new" message in the listserve digest.

Once Brian Kantor at ucsd.edu was notified of the problem he promptly
dropped the offending address from the reflector.

The folks to really blame are those who subscribe to an e-list, then
later cancel their account without unsubscribing to the e-list. That's
when the bounces begin.

Jeff KH2PZ / KH6

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10

Can you prove that? Maybe the bouncing adressee died of some dread
disease or his ISP has technical problems. The configuration of the
reflector with a mail2news gateway as the return-path for its mail is
plain and simply brain-damaged, and there is no-one else to blame.

Your asking a lot! I doubt you will find a new ham radio for under $100
these days. However, you might find a used radio for under $100 (I
bought a two-meter handheld for $100 in a pawn shop once). The antenna
thing is a whole new issue and the cost could range from a few dollars
for parts to build your own or several hundred dollars to buy and
assemble one.

See http://www.arrl.org for information about all you need to know
about amateur radio and, until you get your license (and even after) see
http://ld.net/?kc5fm for low cost long distance service.

Let me know how more I can help.

T48RCT and T49C

The Swedish-Cuban expedition is concluded with about 14 000 contacts from 1,8 to 144 MHz, incl WARC. I am happy to report that all cards are now available on-line at the SK0UX QSL Server. Using the "QSLs Online by SK0UX" concept, you may download your cards directly from http://ham.te.hik.se/clubs/sk0ux (or search for T48RCT or T49C on the Altavista). Many hams have already done so and thanks for all the positive comments.

Our unusual grid square (locator) was FL11SG.

The other QSL route is via SK0UX, address SE-186 91 VALLENTUNA, Sweden, or via the Swedish bureau.

This mailing list is sponsored by Al Waller (K3TKJ).

Please address any questions to: k7on@qth.net

QTH.Net Digests and Archives (for subscribers)
k7on@qth.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
digitest and subscribe digitest-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe digitest-digest
unsubscribe digitest

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index digitest-digest

and get a list of files that are available by request.

Here is an example:

>>>> index digitest-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get digitest-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/digitest-digest.archive

> crack at remaining on frequency, and the DX station would normally move
> up a couple of kHz to work his new pileup. Of course, the USA ham

That's correct - the DX station would be expected to move...

...but if he/she does not, I would expect the other station to show a
bit more common sense and move to another freq instead of calling CQ
again. That would show his idea of courtesy... Even if he does not agree
to the behaviuor of the DX station, he could be polite to his fellow US
hams and give them a chance to work the DX.

Remember: nobody _owns_ that freq !

Sounds like we need etiquette questions on the license exams. If there is no reason to draw colpitts oscillators, or give code tests when we have so many getting past the extra code with doctors papers,
maybe we need them to exhibit they know how to conduct themselves in a gentlemanly manner.
Who posted the dx spot? Seems that was a source of the problem also.
At the present time seems the only cure is have such an elaborate station you outhear, outtalk the stateside interference.

Awhile back I wrote in this group that I wondered what prefix that the Chinese Government assigned to Hong Kong since it reverted to the PRC.

I did receive an answer that the prefix was VR2.

What makes me wonder is that the VR series has been assigned to the UK. Did the UK give that VR series prefix to the PRC? Does that mean that other UK territories sutch as Pitcarin Is. VR6 are changing or what?

I am a little confused here. Can someone set me stright here?

If I were the DXer I would ask callers to QSY with me +/- as
warranted. On the practical side, I, as the US stn, would QSY a few
and let the DX have the freq. After all, none of the freqs are mine
and I can QSY with extreme ease.

Per the EA5EYJ listing of QSL routes for teh 1997 CQ WW CW contest,
VR2WO can be QSL'ed via W4MS.

http://www.arrakis.es/~ea5eyj

I do not personally know if this is correct or not .. it is simply
one data point for your info.

>QSL via K9EC

Note that K9EC changed his call to K9MZ earlier this year. Depending on how new your callbook is, you may need to look up the new call. Either way, he should show up in Georgia. (an Illinois address is out of date)

As a very general rule, all VR2s are the same people as the old VS6s of the same prefix - i.e., the QSL route for VR2WO is the same as that for VS6WO.

To my knowledge, only one amateur was ever assigned an amateur callsign which contained no numerals, only letters. (This was an official government assignment, not a "self assigned" handle.)

Who was this amateur? What was the call? Why was it assigned?

(Hint: This same amateur once held (jointly with another station) the record for the longest-distance HF communications.)

I, too, have only heard of one. Ernst Krenkel (1903 - 1971), RAEM,
was assigned the callsign of the ship "Chelyuskin". He had maintained
the radio communications which helped to rescue the people who had
been aboard. For his merits, he was allowed to use the ship's callsign
as amateur callsign.

"Chelyuskin" failed in 1934 during a journey in the Arctic Ocean.
The ship was damaged by the pressure of the ice and sank. The
people who had been aboard set up a camp on the ice and were
rescued by airplane after two months.

The world distance record was made in 1930 between Krenkel on
Franz-Josef-Land and the U.S. expedition near the South pole.

3183. December Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-09 00:00:00 UTC
From: ids@nol.net
Message-ID: <348ccb13.26500640@news.nol.net>
Source record: 30889

PROPAGATION - by AD5Q HOUSTON, TEXAS -- DECEMBER 1997

And the new cycle is just beginning! With solar fluxes swinging from the 80s to around 120 within a month, it was hard to forecast highband conditions in the CQWW. Geomagnetic conditions were disturbed in the phone portion, but solar activity was high enough to open 15 nicely. For the CW test the flux was also at the high end of its monthly range, but with QUIET geo conditions. Propagation was as good as could be expected from this young cycle.

Evening conditions on 20 Meters were somewhat improved, but it takes a higher flux to open the night paths at this time of year. Long path openings are better and more reliable, but these night paths span the southern hemisphere where it is late spring. The main path to Europe is in the morning, and is a daypath. With the daytime MUF often substan-tial-ly higher than 14 MHz, the better path to Europe can be found on 15. This was the case during the contest, where many had good rates during runs. However there will still be days when fluxes are under 100, and where 20 will have the better daypath. Since we are now late in the DX season, the polar region is dark. We cannot expect much propagation over high latitude paths on 15 yet, so from W5 there won't be much in the way of Russian openings. Over these difficult paths 20 Meters should be preferred, both at sunrise and at sunset. Use the Antarctic path for southern Asia.

As I write this, the Ten Meter contest is approaching. We have already experienced brief openings to Europe here, mostly to the western parts. The openings to Japan have been better. During the CQWW, many made Asian long path contacts in the morning via the southeast. The east coast had a much better path to Europe with fairly good runs, but these occurred before the band even opened for the rest of us. At best, we can expect about the same conditions for the Ten Meter contest (hoping for high flux and low K-Index). For most of us, this will be mainly a stateside contest with lots of Sporadic-E propagation to provide high rates. We will surf the Caribbean looking for multipliers and pileups, and hope for an opening to Japan for DX runs. This is still a substan-tial improvement over recent years, and activity should be sharply up this year without the heavy reliance on weak signal backscatter.

The night band with the most quantity is still 40. Europe peaks best before sunset for us and after sunset for the east coast, but it is the same opening. In mid-evening we follow the sunrise across Russia and then Europe after midnight. The peak on 40 will follow the brief sunrise peaks on 80 & 160 to the same area.

>Quite possibly. But will DXCC Desk accept it for credit?

>73 de G3NYY

NO! I sent this question to the DXCC Desk, and Bill Moore, NC1L,
responded to me by quoting the rules, which include this passage:

Photocopies and electronically transmitted confirmations
(including, but not limited to, fax, telex, e-mail and telegram)
are not acceptable for DXCC purposes.

Sigh! Someday, we'll get this process into the 20th Century -- hopefully
before it's over! Still, it was nice to print out my QSLs for T49C and
T48RCT and get to look at them, even if they don't count for DXCC.

3188. How do I get the power company to solve my QRN problem?

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-09 00:00:00 UTC
From: frohro@wwc.edu
Message-ID: <frohro-0912972139220001@10.0.2.15>
Source record: 30894
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.dx

Hi All,

I have lived with an S7 QRN level in several directions for about five years. It became obvious to me a long time ago that solving that problem was the best thing I could do to improve my station's performance. I contacted the power companies (there are two in this area) and the biggest one pointed its finger at the smaller one who solved a few minor interference problems. The major ones were never solved because they said that my HF antenna (a four element quad on a 120 foot tower) could pick up things so weak they could never locate them. I then bought and SEM QRN Eliminator which is similar to the JPS one now available. It didn't perform very well because I never could get another antenna as good as my quad at picking up the QRN and so it couldn't be phased out very well. I've tried a number of rigs with nice noise blankers. They help, but recently I decided that I would go back to the source and solve the problem there. I purchased a handheld SSB receiver that will receive into the UHF range and built a nice little 435 MHz quagi. I have found it pretty easy to walk the streets and find power poles that are noisy. I have reported them to the local power company. Unfortunately they are glacial in their response. I finally talked to the guy who looks for RFI problems today and he said that he would check the four poles I had originally turned in, but no more. Today I found two more. I want to continue the process until the problem is solved. I'm wondering if anyone knows of a way to build a fire under the electric company. How can I make them more interested in this? I was told today that RFI is a very low priority for them. I think they don't think eliminating something I can hear with such a large antenna is unnecessary.

Any suggestions would be very welcome!

Rob KL7NA/W7

Well, here are just a few:

W.J Shaw, TWX
H. Hillesdey, HHX
J.E. Nickless, NXC
George Robertson Marsh, NXT
Arthur F. Carter, IRX
Claude Willcox, WUX
G.G. Blake, BOX
J.M.C. Dennis DNX,
Philip R. Coursey, GYX
B. Hippersley, HLX
Noel H. Hamilton, IXY
Howard Littley, LBX and LSX
John Scott Taggart, LUX
A.T. Lee, LYX
Leslie McMichael, MXA
H.W. Pope, PZX
Rene Klein, RKX
Gilbert W. Tonkin, TBX
W.J. Shaw, TWX
W.K. Alford, TXK
A.L. Megson, UAX
H.S. Walker, WBX
Mrs. C.E. Ingram IXI
Leslie McMichael MXA

That's all I can remember. (It's no coincidence that all the callsigns
contain the letter X).

That's right, it shouldn't. It should only return a brief service message stating the nature of the delivery error, and optionally, the header info useful for debugging the problem. It should not return the entire message. That's just a huge waste of net bandwidth.

>was the best thing I could do to improve my station's performance. I
>contacted the power companies

I have found that a nice letter to them, with a copy to the FCC field engineering office responsible seems to get their attention. (They apparently haven't discovered yet that the FCC is a paper tiger.) Further, you're the customer, and they are in the business of distributing power not impulse functions. Persistence seems to pay, not just a phone call when you get angry, a letter that they cannot forget. The Public Service Commission responsible is also a help, they are an elective body, and despite usually being comprised of politically motivated ex-power company employees, they know how to get the attention of the company with respect to customer complaints.

Getting on the good side of the guy in charge of curing the problem helps. You apparently know who he/she is. I've found that any of them, all the way to the VP level will sell their grandmother for a free lunch. Make an appointment with the guy, make it for just before lunch, do the obvious, and discuss the matter. If you do his work for him a few times, (Find the problem down to the pole or two level), he gets faith in you and you work your way up the priority list.

Try real hard not to be a pain in the ass by complaining about the smaller problems before the big ones get cured. The nulling amplifiers probably won't work due to the multiplicity of sources, so give the above a try. The power folks are reasonable facsimiles to humans too. The same things that work on your kids and grandparents will be successful with them too.

Returning undeliverable mail complies with RFC821 which has the
concept of "final delivery", that point where a message leaves the
smtp world. How would you prefer to see final delivery of
undeliverable mail in a manner which would still be RFC compliant?

Your proposal to change the mail transport rules would indeed save
bandwidth, but the problem we had here recently was not caused by
adherence to the RFC but by a mis-configuration of the return path.

While living in Leavenworth, Kansas, I had a similar problem. The power company engineer -- who I had to track down in Kansas City -- was glad to hear from me. His comment was: "It may be noise to you but to me it's power loss. We'll check it out." They fixed it in three days. Several poles had wetehred contacts, and, they replaced some piece of equipment on one of the poles.

I know this doesn't help you much but maybe someone needs to understand that noise to us is power loss to them -- and that's money loss.

Hi all,

It has been a few weeks since I posted anything to the group, but in case you do not know, I have put a few circuits on my homepage. The latest was the G8TGL Terminal Unit which was originally designed to power an old teleprinter. It worked well on the HF bands although it needed a good filter (or a strong RTTY signal).

There have been loads of comments about the transmitters, but surprisingly, the BUG FM transmitter is still the most popular of the circuits!! Isn't it funny how amateurs like to play!!

I am still working on my all valve General Coverage receiver but the last two bands are a bit slow. I have been abroad a couple of times and don't seem to have much time.

Anyway, the URL (the new abbreviated URL) is:

http://come.to/sm0vpo

It is easier to pronounce on HF SSB.

Hope you have some fun with my circuits. Best regards and Merry Christmas. Regards Harry, SM0VPO (ex G4VVJ / G8TGL)

Article Reprint from August 97 Monitoring Times Page 72
"The World of Ham Radio"
A Gem of a CD
Ike Kerschner, N3IK

Have you ever stumbled onto something truly valuable? Remember the surprise, the thrill? You can experience that same feeling when you examine a copy of the CD-ROM software by AMSOFT called "The World of Ham Radio"! This is one of the best bargains I have laid my hands on in a long time.

This CD has been around for a few years, and I have seen it for sale at several hamfests. Several years ago I looked at it and felt the CD provided a decent call book with some nice software.

The latest copy, however, knocked me over! I held a copy of it for several weeks before giving it the once over, but after I started I couldn't stop. Programs that I had on separate disks were available to me in one location with an excellent menu, and moreover, they would run directly from the CD. For many years I have collected shareware at the price of 2 to 6 bucks a disk, finding many I liked but a lot more that were just ho-bum. If I were to add up the cash laid out to come up with a handful of decent programs I am sure it would be several hundred dollars.

"The World of Harm Radio" is a collection of excellent software, in fact, almost all of the programs I have chosen over the years as being the best are on this CD, plus a lot more, to boot. All of this and a call book, too! Looking up a call is a snap in AMSOFT's "World of Ham Radio." But, let me give you a brief tour of what else is on this CD.

When you type CDVIEW, a listing of many different subjects is presented to you. Choose "Antennas," for example, and you will find 26 different antenna programs that will provide full information on a host of antennas, from simple long wires to yagi and complex loop antennas.

"Basic programs" are a wide range of simple programs written in BASIC which will run directly from the CD. Examples of the Basic listings vary from antennas to z calculations.

Twenty-six different programs deal with Morse code - from learning programs to programs that will allow you to send Morse from your computer keyboard as well as copy code via the computer and shack receiver.

A variety of engineering programs are included, among which are a a simple-to-use CAD program for drawing schematics, a program to lay out PC boards, and tools for designing specific circuits.

Eight different logging programs give you anything you want for contest logging, general logging, and certificate hunting.

One program I particularly like is a training manual for the oscilloscope. As you go through the Oscope manual the computer shows demonstrations of what will appear on the screen of your oscilloscope under different testing situations. Last Christmas a good friend wanted more info on using an oscilloscope and we spent several weekends going over the use of the instrument in my shack. If we had this program, I am sure my friend would have learned a lot more a lot faster.

Equipment modifications also are included on the "World of Ham Radio" CD. I examined all of the mods available on the CD and am anxious to try several, especially one for a scanner I have. Not every piece of equipment is covered, but there is a lot!

Eight propagation programs allow user to determine the best time and frequency to work various parts of the world.

Included are 36 packet programs from very simple to very elaborate terminal programs, information on using packet, and circuits for various packet projects. If you ever wanted to try RTTY, 10 programs on this CD will let you get your feet wet in this interesting mode with minimum outlay.

A very interesting listing for satellite comm- unications provides info on operating and tracking programs, again from simple to fairly complex. There are several programs for SSTV and WEFAX that I am just now beginning to explore.

As always, there is a "Miscellaneous" listing containing 89 programs which I have only begun to explore. There is also a question and answer section that deals with many subjects, Scanner buffs and SWLs will find a lot of good information on this CD: frequency lists, data bases, modifications, and more.

In short, "The World of Ham Radio" gives you hundreds,
if not thousands of dollars worth of information on ham radio,
and all at a price of $29! If you have a CD drive on your
computer, grab a copy ASAP. If you don't have a drive,
consider putting one on your machine just so you can
use this super CD.

Ike Kerschner, N3IK

. ======================
*** The Daily DX ***
======================
Volume 1 Number 186
December 12, 1997
Edited by Bernie McClenny, W3UR

Headlines

The Midway Kure DX Foundation is expected to soon announce details for a springtime 1998 DXpedition to Rodrigues Island (3B9). This MKDXF 3B9 operation will be a multi-station all-mode, all-band operation. Additional information will be available after 21 December.

Karl, K4YT, is currently in Kinshasa, Democratic Republic of Congo and has been busy working late at night. Because of safety problems he has been unable to travel to the ham station. However he does plan to be on today only as 9Q5YT. Look for him on SSB on the highest open band. Try 28495, 21295 or 14195 in that order. He will leave Kinshasa on 13 December.

Eric Jauch, F5JKK, reports he will be in Chad from January to May 1998. He plans to be on the air around 15 January as he uses an ICOM 706, a 5 or 6 element beam on 6 meters and W3HH or R7 for HF. Eric enjoys CW and plans to be on this mode mostly. He hopes to be assigned TT6M or TT8AQ.

Suggested frequencies are:
CW 28025, 24895, 21025, 18075, 14025, 10103, 7025, 3525, 1837
SSB 28480, 24945, 21280, 18145, 14180, 7060, 3795, 1848

6 meters is his favorite band and he says he will listen when ever conditions warrant to: 50105, 50110, 50205, 28885. His grid locator is JK72. He is hoping to find a RF switched preamplifier for 6 meters. QSL via F6FNU direct only with SAE and return postage.

JW1BJA, JW4KQ and JW5VK will be active until 12:00Z 15 December.

QSN

3V8BB - TUNISIA - Al, F2KN, was active from the club station yesterday on 14198 from about 16:00 to 18:30Z. He will be on this weekend. QSL this operator only to F6FNU.

3XA8DX - GUINEA - Baldur and Franz continue to nock out the Q's from this semi-rare one. The seem to be sleeping from 01:00 to 07:00Z and on the radio at all other times. Yesterdays operating habits were as follows:

GMT CW SSB
---- ----- -----------------
7 14025 14195
8 14025 18145
9 18082 24945
10 28025 24945

00 14025

4U1ITU - I.T.U. Geneva - DK7YY was operating this club station yesterday on 10103 just before 18:00Z.

HZ1RT - Saudi Arabia - Showed up on 21245 around 13:00Z working Europe and East Coast US stations.

J52IM - GUINEA BISSAU - Dave was found on 14227 on a net around 21:00Z. QSL via KB9XN.

JW1BJA - SVALBARD - Was busy working JA's on 7004 from 20:00 to 21:30Z. QSL via LA5VK.

PJ8/KG8XV - ST. MAARTEN - Isao was on 10105 around 09:00Z and then on 7004 around 11:00Z working his homeland Japan. QSL via JH1ROJ.

TL8PL - CENTRAL AFRICAN REPUBLIC - Pascal was reported on 18090 just after 13:00Z working East Coast US stations. Later he was on 7020 working JA's at 20:30Z.

YJ - VANUATU - Holger, YJ0AIO, was working Japanese and US stations on 10102 from 06:00 to 07:00Z. Birgit, YJ0AIQ, showed up yesterday on 14228 working West Coast US stations. QSL both via DL7VRO.

The entire e-mail message is returned so that it can be sent
again if mis-addressed. This means that users have no
technical reason to retain copies of sent mail.

The alternative would be to keep copies of all e-mail
sent on disk for some long period of time (say a week).
In the minicomputing, expensive-disk environment is which
the Internet protocols were developed that option didn't
make much sense.

For an e-mail list <--> news gateway bounce messages should
not be propogated. There is an e-mail header field that
exists precisely so that service messages can be filtered out
(now if only we could convince all the LAN e-mail gateways
manfacturers to use it).

> with a cut-and-dried answer, it is not, apparently.

Depends on the band and on the DX willingness to make extra
QSOs. Many are not interested in working huge pileups.

On most bands, EXCEPT 80m DX Window, the DX can move up and
down a few Kcs and proceed. Sure you can always if it is a
rare DX let him take the frequency.

In the 80m DX WINDOW it is another story. Many countries
(VKs, JAs) are stuck in a very small window 15Khz wide and
THEY CAN'T move. So a US or Canadian station monopolising
3795 during grey zone time for these DX is Hum not very nice.

Another thing is making very long QSO with a DX station in
the window. I hear almost daily people talking for 15 minutes
with a DX just at your sunset, talking about their last
operation, new dog, last trip to timbuctu while hundreds
of stations are loosing propagation. Bad very bad...

3218. ARRL Jan98 Meeting

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-14 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <34937139.10324286@news.mindspring.com>
Source record: 30725
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.dx

I propose that Section 97.101(a) of Part 97 might better read as ... "Amateur operators should be familiar with, and should abide by, the voluntary band plans that are applicable to the frequency bands in which they operate."

We need to help protect our fellow hams who operate weak signal CW/SSB, Satellites, APRS, and ATV from FM encroachment.

There is a good article on this subject in the January 1998 issue of CQ VHF on page 4.

I suggest that everyone who agrees with the above write or send email to their ARRL Directors before their January meeting.

Les
W4SCO

SB DX @ WW $OPDX.335
Ohio/Penn DX Bulletin No. 335

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 335
BID: $OPDX.335
December 15, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, KF2O, W3UR & The Daily DX, W4WX/KG4GC, W5SJ, AC6LF, K7AR, N8AC, W8GMH, WB8LFO, K9FD, DL2FAG, JA1OGX, ON4CEL, VK3AKK, VK6APK and QST for the following DX information.

3B9, RODRIGUES ISLAND. "The Daily DX" reports that the Midway Kure DX Foundation (MKDXF) is expected to announce soon details for an upcoming 1998 springtime DXpedition to Rodrigues Island (3B9). This MKDXF 3B9 operation will be a multi-station all-mode, all-band operation. Look for additional information to be announced after December 21st.

4U1UN STATION/QSL TRAGEDY. OPDX InterNet Subscribers will receive an additional bulletin containing a message written by Jerry, WB8LFO, on the happenings of the 4U1UN station and QSLs.

5A21, LIBYA. Another Libyan DXpedition will take place beginning March 2nd and last possibly until March 8th. Operators will be Tiny/ON4CAT (YL), Patrick/ON4APS and Frank/ON4CEL. This will be the first YL operation ever from 5A. The trio will sign 5A21PA, which reportedly stands for the "celebration of the declaration of 'People Authority', and born the first Jamahiriya." Operations will be from the 5A1A HQ station. They will operate on all bands, conditions permitting. Tiny will concentrate on SSB, Patrick will be on RTTY and Frank on SSB/CW. Frank will look for North American stations during their grey-line on 40 and 80 meters, mainly on CW. The QSL manager for this operation is ON4APS, QSL via the bureau or direct to: Piesen Patrick, Koolkerkesteenweg 141, B-8800 Brugge, Belgium. Also, check out the Internet WEB Site: http://users.glo.be/~frankyb/5a21pa.html

9N, NEPAL. By the time you read this, Joe, VK6BFI, and Neil, VK6NE, will be operating from the QTH of Dick, 9N1ARB. Activity will last until December 24th. Their callsigns will be 9N1BFI and 9N1NE. Operation will be SSB only. The primary purpose of this trip is Amateur Radio, so they

shouldn't be too hard to find on the bands. QSL to their home calls.

AH8, AMERICAN SAMOA. The 59(9) DXReport states Lawrence, KS6DV, is now sporting the callsign AH8LG. The only QSNs OPDX could find were on 20 meters. Look around 14190 kHz (+/- 10 kHz) between 0530 and 0600z. QSLs to: L.A. Gandy, P.O. Box 1618, Pago Pago, AS 96799.

BY1, CHINA. Merv, K9FD, and Harold, W0RI, are planning a trip back to BT1QH, and it looks like it will begin on January 14th and last until January 26th. Their goal is primarily a low band operation concentrating on 160 and 80 meters. They have extended their stay to try to take advantage of any propagation. If conditions are poor they will be on 40 to 10 meters. They report that they should have InterNet access from the BY1QH station and will post the E-mail address later. They will keep everyone updated by E-mail on the "Top Band" reflector and also on the "DX" reflector. There will be NO online logs or web page. They are still in need of any help in funding the trip and off-setting the cost of leaving some equipment/gear for the club station. Any amount, no matter how small, is very much appreciated. Merv states, "We would like to thank the Mississippi Valley DX and Contest Club for their sponsorship and funding for this trip. Thanks very much to all who have helped thus far and contributions will be mentioned on the QSOs, also. We will post updates as the day gets close. See you all in the log."

DXCC ANNOUNCES NEW FEE SCHEDULE FOR 1998! In January's QST (page 83), the ARRL DXCC Desk has announced new fees for DXCC, including a $10 fee for an initial DXCC application. This has been FREE for League members. It will also cost more for walk-in card checking at conventions or at League Headquarters. All applicable fees are charged on each application. Applicants must supply return postage or an SASE for any cards or information requests. The new fees go into effect January 1, 1998.

Current Fee	Item	New Fee
FREE	initial application each year, member	$10
$10	additional application, member	$20
$10	initial application, foreign nonmember	$20
$20	additional application, foreign nonmember	$30
$2	convention/HQ walk-in card check	$ 5
10 cents	per additional QSO (*)	15 cents
$10	certificate fee (includes pin)	no charge
$25+shipping	Honor Roll & 5-Band DXCC plaques	$30+shipping(**)
$40+shipping	#1 Honor Roll plaque	$50+shipping(**)

(*) First application prices are for 120 QSOs maximum, and additional application prices are for 100 QSOs maximum. QSOs beyond those limits are charged at this price.
(**) Includes pin

H44, SOLOMONS. Just a reminder! If you were lucky to catch Northern Ohio DX Association (NODXA) members and very good friends Holger, DL7IO,

and Brigit, DL7IQ, as YJ0AIO and YJ0AIQ from Vanuatu this past week, remember to look for them from H44-land. They should be active by the time you read this (after December 16th). Holger will be active again as H44IO and Brigit is hoping to get the H44IQ callsign. Their stay on the Solomons will last only until January 3rd (or possibly the 10th). If they leave the Solomons on January 3rd, they will return to Vanuatu for another week. QSL via DL7VRO.

KH0, SAIPAN ISLAND. A group of JA operators will be active from here December 19-22nd. Their planned activity will be on CW/SSB, 80-10 meters, including 30 meters band. Look for the following: KH0S - QSL via JA1OGX and KH0U - QSL via JA1QNV.

JX, JAN MAYEN. Terje, JX3EX, will be active until next March (or possibly until April). Activity will be on 80-10 meters. This station sometimes shows up on the 14226 DX Net around 1730z. QSLs can be sent to: Terje Berg, 8099, Jan Mayen.

QSL INFO AND NEWS.....
Merv, K9FD, reports to OPDX that he is the manager for BY1QH as of June 1997. He currently has the logs for last week's contest and is answering contest QSLs now. SASE is required. He will continue as BY1QH's manager for sometime.

The Swedish-Cuban T48RCT and T49C DXpedition has concluded with about 14000 QSOs on 160-2 meters which included activity on the WARC bands. Goran, SM0DRD, reports that all cards are now available "On-line" at the SK0UX QSL Server WEB page. Using the "QSLs Online by SK0UX" concept, you may download your cards directly from:
http://ham.te.hik.se/clubs/sk0ux
ADDED NOTE: Under the current DXCC Rules, these electronic QSLs will NOT be acceptable for DXCC credit (Read under Section I. Basic Rules, rule 2). The other QSL routes (for an actual card) is via SK0UX's address: SE-186 91, VALLENTUNA, Sweden, or via the Swedish bureau.

Karl, DL2FAG, has been receiving a couple of QSL requests for the station Z21AV. Karl reports he is >>> NOT <<< the manager of this station. OPDX could not find a QSL Manager. Please check the CBA.

Al, K7AR, reports he heard a rumor that there was some confusion about where to QSL his recent operation as ZF2RA last month. Please QSL ZF2RA via K7AR. If you can't find K7AR in your callbook, please look up his previous call, WA2TMP, which is good back to 1985 in any callbook.

NEW LOG SERVER AVAILABLE. Dave, NO4J, is providing a free service to anyone who wants to make their DXpedition and Contest logs available on-line. With this service, individuals will be able to check and see if their QSOs are in the log. The following logs are available: VP5DX (CQWW); C6AJT (CQWW); and W4ZR (CQWW). All you have to do is go to the following WEB site and enter your callsign:
http://db-sales.com/nfdxa/logs/logs.html

If you are interested in adding your logs, please send your logs to:
no4j@pobox.com (Send logs in .RES or .ALL formats). If you have any questions about submitting your logs, contact Dave at "no4j@pobox.com" or Bill, W4WX/KG4GC at "w4wx@bellsouth.net".

Michel, HH2HM, is now the QSL Manager for the following station:
UA0FDX, EX2M, HH2PK, T95LGN, BA4TB and T26JC. QSL via: HH2HM Michel, P.O. Box 104, 22650 Ploubalay, France

R1FJZ NEW MANAGER/ADDRESS. QSL route on this is to U3AJ, B.A.Ermilov, B.Serpunovskaya Str 19/37 - 48, 113093 Moscow, Russia.

SO5, WOLIN ISLAND. Berlin's NODXA members and special friends have advised us that they will be activating once again the Polish Island of Wolin (IOTA-132) from March 10th to May 10th (1998). No frequencies or times were given at this time, just that they will be there on these dates and they hope propagation will be good. The operators will be: DK2OE/Mike, DL7IQ/Birgit, DL7IO/Holger, DL7VRO/Fritz, DL7VYL/Gerda, DL7UBA/Roy and DL1YFF/Hans-Juergen. The callsign to be used will be SO5OE/1.

SPECIAL EVENT AND PREFIX. Beginning January 1, 1998, the Geelong Amateur Radio Club in Victoria, Australia, will be celebrating their 50th year of existence. They understand that this may be the only club in VK-land that has been active this long. During the whole year of 1998, they will be using the callsign VI50G (Victor India Fifty Golf). They will be active on all bands as well as in major contests. There will be a special QSL available for this event. QSL via VK3ATL: P O Box 520, Geelong Victoria, 3213 Australia or via the Bureau.

VP2, ANGUILLA. Bill, W5SJ, will be active as VP2ESJ from January 22 through January 26, 1998, for the CQWW CW 160 meter Contest (January 23-25th). QSLs go to the home call, W5SJ.

Subject: 4U1UN Station/QSL Tragedy

"4U1UN Station/QSL Tragedy"

As QSL Manager for 4U1UN in the years from 1992 to April 1997, I have sent out in excess of 110,300 cards. There is no backlog of cards at WB8LFO. All cards that have been received have been answered, if they were in the log.

Obviously, I have not been able to answer cards that I have not received and through investigation concerning outstanding QSLs has shown that most cards not responded to fall into this category--that is to say-- they were never received at WB8LFO or lost on the return route.

Regarding the current QSL situation, from the outset, I was against the idea of splitting up the QSLing for 4U1UN as I thought this would cause confusion. In fact, I was not consulted about this change before hand and the first I knew about any change was when I saw W6TER's posting on the DX reflector. I refer to the decision of the "new management" of 4U1UN to have QSLs for QSOs BEFORE 1 April 97 go to WB8LFO and after 1 April 97 to W6TER. I have made several requests to the "new management" of 4U1UN in order to resolve this problem, but they have not responded. In the meantime, I receive many cards that were sent to W6TER for contacts made before 1 April 97 and they were forwarded to me for reply. W6TER's labels are pasted over the call signs for these cards which makes it difficult to read the call sign of the stations.

Quite indepentent of the QSL question let me suggest that there is a REAL TRAGEDY which has occurred at 4U1UN. The so called, "new mamagement" has permitted the station, which had been very active in emergency work, contests and normal amateur radio activity, to become totally inactive. Since April of 1997, the station has only been on the air approximately

three or four times. As far as I can determine, there was no 4U52UN Anniversary activity at all this year, and the station was not heard in the " CQ Phone or CW WW Contest". Furthermore, it seems that all of the HF Yagi's at the station which had been installed over many years have been taken down!

I have heard reliably, that in December of 1996, the former or old management of the club, principally Dave, K2GM (who was the station manager) and Carmelo, AA2FN along with Gunn, N2ATF, were in so many words "EVICTED" from 4U1UN. K2GM and AA2FN were forced out because they had been carrying out disaster related humanitarian communications at 4U1UN. The "new management", has misled officials of the UN by telling them that the disaster operations carried out by the old management were "illegal". Isn't that Unbelievable ?

I sincerely believe that we, as radio amateurs, should be very concerned about what has happened at 4U1UN, and one recourse would be to petition the UN to restore the completely legal and proper operations that had taken place at the station for so many years. This could be done by writing to the Secretary General of the UN, Mr. Kofi Annan.

In my opinion, 4U1UN is a station that belongs to the world, to all of us, not to a few misguided bureaucrats who could care less about amateur radio. If we are not willing to fight for 4U1UN we deserve what we get.

Jerry, WB8LFO

Agreed. In the CW band you don't have the limitations of the SSB DX
window and your CQ frequency is "in theory" yours.

Yes but when that happens on a daily basis in the 75m DX Window it is
kind of a nuisance, especially at sunrise/sunset.

I am not sure what the original message you replied to was about, but I have a comment about yours.

Who cares if they have touched a straight key... Do you blast users of calculators because they have never used a slide rule? Do you blast automobile drivers because they have never driven a horse and wagon? Do you blast a restroom user who has never used an outhouse?

Obviously I could go on and on with this, but I believe my point is well made. Why must so many hams live in the past??? Do you forget that hams have a profound impact on the inventions of tomorrow? Just take LoJack for example. You do know that hams were directly responsible for the advent of that technology don't you?

I AM NOT making an argument of code vs. no code here. These "computer nerds" as you put it had to learn code just the same as you did to obtain the proper license class to operate in the HF bands, so who gives a rat's ass how they accomplish it once they have learned it.

Okay, you are set in your ways, that is fine. I venture to say that someone in your life has probably referred to you as a hard headed codger, BUT that is okay... You are entitled to your ways. I just think that it is silly for you to profess that people who don't do it, or see if your way are wrong.

Thanks, and 73 KD4JBM

Which brings up another very interesting question. Is a VK or a JA
a 'DX' station ? Who IS DX ? And who IS NOT DX ? I've
worked fifteen thousand stations in Japan. Does that mean JA's are
not DX and should stay out of the DX window ? I thought DX meant
'far away'. Some people apparantly think it means 'rare'. Most people
probably wouldn't consider W3's or JA's to be 'DX' stations - does
that mean W3's and JA's should not talk to each other in the DX
window ? Who decides who IS DX and who is NOT DX ?

I agree. If you are calling CQ and I answer you, and we have a contact, I
don't expect you to give up the frequency, nor will I answer anyone else
who calls me when we are finished. Hams should not be rated on a
scale of 1 to 10 by who is more 'rare'. You found a frequency, it wasn't
being used, you called CQ, you got an answer from someone, so when
the QSO is over, it's still your frequency, irregardless of who wants to
work the station you just talked to. If the PJ2 wanted a pileup, I'm sure
he could have gone up the band and generated one. Maybe he just felt
like chatting with somebody for a few minutes. Sometimes I don't feel
like pileups I tune up and down the band looking for other people calling
CQ.

>in the least for expressing their international friendship.

Something that has always amazed me over the last 13 years of operating from Guam is the fact that some people feel 'DX' is obligated to work as many people as possible every time they turn the radio on. Who makes the decision of the alloted amount of time the 'DX' station is allowed to spend talking to one station ? I don't know about other 'DX' stations, but if I turn my radio on, sometimes I am in the mood to sit and pass out signal reports, sometimes I am in the mood to chat. Sometimes when I am passing out signal reports, I'll bump into someone I know whom I haven't talked to in a long time, and I'll stop passing out signal reports and talk to him. For as long as we feel like talking. Until somebody else starts buying my equipment for me or sending me a paycheck every month, I don't feel obligated to work 500 people a day. Some days I feel like working 500 people, so I do. Some days I don't. I have had many people actually apologize for 'taking up too much of my time'. I wouldn't be talking to somebody if I wasn't enjoying doing it.

People should realize that the only difference between a 'DX' station and anybody else is where the pole that holds the antenna up is planted. Including a few 'DX' stations.......

The frequency belongs to the guy who called CQ. Doesn't matter who called
him. The guy who spotted the station on the cluster should have spent a few
minutes listening before he put out the spot, he is the problem in your example.

Example: I was listening to an old guy with a rare call on a little island
ragchewing with one of his friends one nite on 20 meters. They were discussing
various TV formats, PAL, NTSC, whatever. Nice technical discussion, most of
which I didn't understand, but I was doing other things so just casually
listening. At the same time, I had a window open monitoring the packet cluster.
Some knuckle head spots the guy with the rare call on the little island. No
note, just a spot. Which probably caused 292 computers to tune 292 radios to
the frequency of the spot and started the red lite over the garage door
flashing, which in turn made 292 guys turn off the lawn mower and go running to
the shack. The guy with the rare call on the little island continued the rag
chew with his friend about TV formats, totally unaware of the fact that 292 guys
who needed him for a 'new one' were frothing at the mouth waiting to call him,
and also totally unaware of the fact that a dozen or so of the 292 were now
sending out announcments and spots on the cluster whinning about 'how long is
this idiot gonna talk about TV?'. All caused by the knuckle head who put out
the original spot..... I love DX clusters - great fun. But people should spend
a few mintues listening before they start typing.

Frequency relinquishment is in no way related to who needs to work what.
In my opinon, any DX station who would take the frequency after answering a
CQ is rude, as is anyone who pops up on a frequency and starts calling someone
without first figuring out who originally started original QSO.

I would not expect the U.S. station to relinquish the frequency and I see nothing at all wrong with him to continue calling CQ - he worked the 'DX' because he spent ten minutes calling - the guys who were cutting the grass didn't make the effort, he did. It's not his job to round up the DX while everybody else does yard work.

Bingo, well said. You can't wrk em if you dont call CQ, and if someone is catching a few then go next door and try your hand by making a few casts, don't expect a fisherman to leave till he's done fishing.

Best of DX - wb5gmk

Hi John, You are completely correct in your assessment. HOWEVER,
(you knew that was coming, didn't you?) if you ever needed to make a
calculation for a resonant antenna and all you have is a slide rule,
you might be sorry if you couldn't do the calc. If you had to
transport your family out of danger and all you had available was a
horse drawn wagon, you would want to know how to crack the whip. As
to the outhouse....draw your own analogy!

I use code because it does the job I (repeat-I) want to accomplish in
the fashion I desire. I am sure there are better/faster/easier ways
to do it but all I gotta satisfy is ME. Now, if you don't want to use
CW, stay on the VHF/UHF bands where knowledge of CW is irrelevant.

Just my humble $0.02.

3232. PA3CQR Grayline program (freeware)

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-17 00:00:00 UTC
From: Folkert Geurink <geurink@iri.tudelft.nl>
Message-ID: <3497ED9A.79F1@iri.tudelft.nl>
Source record: 30739

The PA3CQR Grayline program calculates possible grayline propagation paths for a given day from your qth. It's freeware and you can find it at

http://irian1.iri.tudelft.nl/users/pa3cqr/grayline.htm

Please try it and send any comments to me.

73, Folkert PA3CQR

3233. Plan of elec.keyer

We are losing a generation of possible HF operators.

Most of the new hams are "VHF/UHF only" ops. They aren't getting the experience of HF methods and technology, and the "mechanics" of an HF station and the "feel" for propagation and international DX contacts. The implications of this will not intirely be felt for another 15 to 20 years.

Amor Powers

3236. HAMs Active on 11 Meters

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-17 00:00:00 UTC

There are a_lot_of_ham_operators who get on 11m from time to time.
You can occasionally identify the 11m hams by the
slight difference in terms, lingo, and culture clash. Hearing "you're
5-by-9-plus-10 and we're running 100 watts into a vertical" is a dead
giveaway.

The fact is, 11m is a fun and exciting band. 11m DX propagation is
instantly apparent. Pacific Islands, Africa, and many exotic countries,
rarely heard on other bands are regularly active on 11m. Tuning into
some 11m frequencies is better than the Beacon Network! Lots of contacts
via Es propagation. Meteor scatter is being worked on 27.385 LSB. The
huge simultaneous proliferation of SSB users (and mobile activity) from
all walks of life make it very interesting listening.

The intrigue of outbanding also fascinates some ham operators. It puts a
little bit of the fun and excitement back into operating. Many operators
are loathe to admit that they like to operate 11m to their fellow hams,
or even their therapist.

Source record: 30744

Indeed, I am one of those individuals stuck in operating in the VHF/UHF bands. My rationale is as follows:

-Code has indeed gone to the wayside as far as the college age kids like me. My feelings are if you want to use any form of voice (FM,AM, SSB) you should pass a voice test. If you want to use CW you should pass a CW exam. If you don't want to use CW, you don't have to take the test. One could easily change the higher level exams to focus on HF VOICE operating proceedures more so. This idea is extremely practical and efficient.

-It is not that the younger generation dislike CW, but there is a feeling that the impersonality CW communication provides outweighs its use. I agree with a large number of college age hams that the CW bands are largely populated with older people with whom we have very little in common besides the hobby itself. I am not trying to slam older people, because someday I will get there too. The difference is, though, that I will not oppose change that will allow for more young people a wider access to Amateur Radio: requiring the CW test or similar roadblocks.

-Avoiding the "I had to take that DARN CW test, and you are going to have to kid!" Once the HF voice addiction comes upon us, surely CW would follow if we felt the need. Such a need would arise if the reward of better DX contacts on CW prompts us to take the CW test(s). I have started a petition that will be sent to the FCC to see if we can't change the CW requirment and replace it with a more intense HF voice examination as far as rules and proceedures go. Those of you who want to sign it, please let me know. So, if the older hams do want to loose the "Next Generation of HF Operators" all they have to do is oppose us.

Using reverse logic, I propose that everyone who uses any form of digital communication be required to pass an examination similar to that of the CW exam. You will be required to change binary to ascii and ascii to plaintext. Let us see who passes that. Of couse I am kidding, but from the emotions I probably evoked from this idea you now know what it feels like be in our shoes.

I find your comments typical of the older generation. People like yourself may be giving your generation a bad name. Remember, us young people will be (and are) paying for your social security payments and Medicare, as well as dealing with the budget and governmental mishaps your generation has made. (I do not mean this in a offensive way as it is reality/fact).

As far as being a computer nerd, you need to be computer literate to do anything in today's society. This, if you really analize it, is another fault of your generation: the individuals who invented the computer. It is just a fact of life for us generation X'ers, even though you may be at or near retirement age and feeling a little guilty for not learning more about computers yourself.

Yet you have a WebTV e-mail address. Now who should be talking about using gadgets that just mimick "the real thing"? You are probably a nice guy and just having a bad day. Take Care.

Alex --N9QIW.

3248. reseau FRANDIX on 28010

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-18 00:00:00 UTC
From: dumont@rectorat.ac-bordeaux.fr
Message-ID: <dumont.10.0011289B@rectorat.ac-bordeaux.fr>
Source record: 30755

Mise en place du r�seau FRANDIX sur 28010
(bande radioamateur des dix m�tres)
La bande des dix m�tres offre parfois des ouvertures fabuleuses pendant la journ�e et mon m�tier de professeur me permet d'�couter souvent la bande pendant les heures d'ouvertures du radio club F6KGF du lyc�e Gaston F�bus d'Orthez et chez moi le soir, le

Les objectifs sont les suivants :
1. Contr�ler de 6 Heures UTC 23 Heures UTC une fr�quence tr�s utilis�e en CW(code morse)dans le monde entier
2. Permettre une �tude de la propagation sur 10m
3. Profiter des ouvertures sporadiques sur 10m
4. Contr�ler les meteor scatter sur 10m
5. Associer les �l�ves du coll�ge et du lyc�e Gaston F�bus d'Orthez cette �tude
6. D�velopper le go�t de la CW dans un radio club scolaire
7. Faire profiter la communaut scolaire et mondiale par Internet des conditions de propagation dans le Sud Ouest de la France.
8. Ouvrir les �l�ves au monde des radioamateurs
9. Etre pr�sent sur 10m en bas de bande pour contr�ler les �ventuelles intrusions.

Mise en place et fonctionnement:
-Pendant la journ�e des �l�ves indicativ�s ou non �coutent la fr�quence 28010 et remplissent un rapport d'�coute journalier(trafic entendu ou non, indicatif d�cod ou non).
-Une bande magn�tique d�filement lent (vieux magn�tophone bandes Grundig r�cup�r�)enregistre la fr�quence de 6 heures UTC 17 heures UTC.
-Un groupe d'�l�ves membres du radio club est charg d'�couter la bande trois fois par semaine vitesse rapide et de d�coder les indicatifs
-Les donn�es de propagations sont collect�es sur des cartes pour dresser des diagrammes de propagation.
-Ces diagrammes de propagation seront disponibles sur notre serveur Web
http://www.univ-pau.fr/~l_febus/lycort.htm et sur le groupe de news radio amateur dx.
-Depuis chez moi j'appelle aux heures et aux demi-heures trois cq de F5OBV k en CW et le reste du temps je laisse la Fr�quence en veille
L'utilisation de la CW(code morse)�vite que des �l�ves non indicativ�s ne prennent le micro(il n'y a pas de micro !)et permet de centrer la pr�paration la licence autour de l'�metteur r�cepteur 10m.

Si cette exp�rience vous int�resse vous pouvez vous joindre nous en �coutant la fr�quence radioamateur 28010 et en nous envoyant vos rapports d'�coute notre adresse �mail
L.GFebus.Orthez@ac-bordeaux.fr ou PK disponibles partir de notre site Web. Nous avons d�j beaucoup de radioamateurs �trangers qui participent cette exp�rience p�dagogique. Des comptes-rendus d'�coute r�guliers seront diffus�s sur notre site Web.

I think most CW operators will tell you that the best way to learn to
send Morse is with a straight key. That forces you to develop good
timing. But if it is a keyer you want, the Jan 98 issue of QST features
a keyer project using a PIC microcontroller. It is very simple.

Now I'm going to add that I think you should stay away from any sort
of key until you learn to receive Morse correctly. Trying to learn to
send at the same time you are trying to learn to receive gives you
too many mechanizations to commit to wetware at the same time
and can cause you difficulties. You'll naturally view Morse as a
mechanical process rather than concentrating on the character
sounds. That's almost sure to cause you to hit a wall somewhere
between 8 WPM and 12 WPM where your progress can stall for
months. You'll find you can send much faster than you can receive
if you learn this way. Increasing receiving speed will be hard.

Learn the characters by sound first. And the best way to learn
the characters is via the Koch method. Several of the Morse
software training programs can implement the Koch method.
This will lead you rapidly to being able to copy 20 WPM. Sending
speed will then come fairly quickly because all you have to learn
to do is to make your hand make the sounds you already have in
your head. And you'll find that your sending and receiving speeds
will be closely matched as you progress beyond 20 WPM.

I learned Morse sending and receiving simultaneously, and it
was a nightmare. I was rapidly able to send 16 WPM, but was
stuck around 8 WPM receiving for a very long time. It took me
13 months of 2 hour a day practice before I finally broke through
and got to 13 WPM receiving. Progress wasn't gradual either,
one day I couldn't do it, the next I could. Apparently the neural
nets finally completed their wiring. People I have helped to learn
Morse by the Koch method have had a much easier time of it.

But talent for Morse *is* apparently highly variable in the population.
A few people have a natural aptitude for it and pick it up quickly, most
others still have to struggle even with the best teaching methods. Some
never seem to be able to do it. If you are one of the lucky ones, you'll be
doing 20 WPM+ inside the first month. If you are in the middle, expect it
to take a few months to be able to both send and receive at 20 WPM using
a good training program.

If you are one of the unlucky ones not gifted with any Morse talent, there are still ways to get you past a 5 WPM test, but you probably will never be a Morse operator. (I've never had a willing student I couldn't get past the 5 WPM test, but that doesn't mean there aren't any out there, just that I've never had one as a student.) Fortunately, there are many things you can do in amateur radio which don't require Morse skills. So don't get discouraged if you find yourself in the no Morse talent category.

Yes, if I am on the highway and there is a big traffic jam I turn on
my CB radio to listen to the truckers, to see where the trouble is and
how to get arround it. They (CBers) are on the spot. My ham radios
don't do me much good in that situation.

You know, I tend to agree with you on this one.

It is not so much the technology and mechanics as perhaps the art and craft or the tricks of the trade level of experience that the folks are missing. On hf, the variables can be considerably different than on vhf, and the tricks of the trade and the tolerances one can use or live with are much different. So much of that is becoming lost in time and practice, but it is still there in the OT rags and books if one takes the time to read it or ferret it out. Sadly, the practical rules de thumb of the thing (read the art and craft of it) are becoming lost in time. That is were many of the next generation will be having a hard way of it. Some call that progress......

Folks folks folks - please relax. You know what I like
best about ham radio? I have friends of *all* ages.
My best ham radio buddies are 45 years my senior, 5
years my junior, and everything in between. Younger
or older, I learn alot from all of them.

So before this degrades into some artificial "Us vs.
Them" frenzy, please bear in mind that *most* of us
are out there getting along, having fun, and helping
each other learn. If you lack this in your life, go
out and fix it or keep quiet. Period.

As for the actual subject of this thread "Lost: Generation
of HF Operators", I too missed the original message.
But ask yourselves this - how many younger/older folks
have you befriended and Elmered in the last 10 years?
If the answer is "none", then look in the mirror and
blame yourself. Period.

On the Internet QRP mailing list, we've got kids as
young as 12 being Elmered by hundreds of skilled
ops/builders, and they're on HF. Building, operating,
Elmering. THAT is ham radio. And it's alive and well
in all ages. Be a part of it, or get out of the way.

For the record, I'm a relative "whipper-snapper" at
30 years old. I operate HF QRP CW almost exclusively
(just my choice...), 25wpm with a straight key, and
do whatever I can to encourage others to give it a
try.

So.... Quit yer whinin' and join us, Elmers!

Cheers de AB7TT,

Good point Les. I wrote an Op-Ed piece for CQ VHF about a year ago on why we need 2 meter management apart from the Repeater coordinators. We are losing simplex freqs as well .....I gave a first hand account of being moved by a repeater!

At least ARRL is paying lip service to band plans (not only for 2 meters but HF as well).

I for one don't operare in that band. I still think working just about anyone is fun and excitement (DX or not; ragchewing or not; HF, VHF, UHF or microwaves; any mode - although I prefer CW). And after being licensed 30 years, if ham radio hasn't lost its sparkle for me, I don't imagine it ever will! So I try to stay legal. Why risk my valuable license?

Does this guy have a callsign? I know, it's not required on internet, but I wonder if he is even licensed. How could he know of the thrill of a rare DX QSO or 1296 MHz QSO if he never made one?

Bill,

This is indeed a UK Novice callsign. Gives access to some HF/vhf bands
mostly on CW with 3W output. To qualify for this ticket, you have to
follow a course, take an exam and sit a 5WPM code test.

What is causing this alleged loss? There have been no new barriers raised to HF access in this generation. In fact, within the current generation there have been significant initiatives to *increase* HF access, such as Novice Enhancement, and HF privs for Technician+ licensees.

With CW and HF Amateur activity dwindling, isn't it about time we stop giving Special Rights to CW at the expense of voice modes?

Special Rights should no longer be needed! Once assimilated into the bands homogeneously, CW will be able to get through the QRM just fine, since it is such a "Superior Mode". Our sovereign rights in the USA to the international DX phone territory have been denied us for too long. We burn for the freedom already enjoyed by other hams of the world.

Equality, parity, and total integration for all modes!

Amor Powers

There is a very simple solution on VHF/UHF to about 90% of the incursions by FM into traditionally non-FM operating areas. Simply petition the FCC to restrict all FM operations to the same subbands where-in repeaters operate, and to those frequencies/channels nationally accepted as FM simplex channels. Do that and also announce it widely via the ham media (magazines, subscription newsletters, news bulletins, etc) and -- as I said, at least 90% of the problem would go away.

I guess you cross-post in order to "troll" for responses. So be it,
there are good people on 11 meters as well as amateur bands. There
are also idiots on both bands. What is your point, exactly?

I am not afraid of posting my real name OR callsign regardless of
which newsgroup it winds up on. It is YOUR cross-posting that brings
my response out of the amateur newsgroup.

If this is your main beef, you have a lot of growing up to do...
especially in the department of hiding your true name and identity.

With CW and HF Amateur activity dwindling, isn't it about time we stop giving Special Rights to CW at the expense of voice modes?

Special Rights should no longer be needed! Once assimilated into the bands homogeneously, CW will be able to get through the QRM just fine, since it is such a "Superior Mode". Our sovereign rights in the USA to the international DX phone territory have been denied us for too long. We burn for the freedom already enjoyed by other hams of the world.

Equality, parity, and total integration for all modes!

Greetings Friends,

You are welcome to download an improved "Active Beacon Wizard".

http://www.wtrt.net/~ku5s/Comments.htm

It's complete with uninstall of course, is non-invasive and requires no configuration.

Version 0.2.1.6 -
Add code to save beacon "Active" status. Also provide default set in case file is missing.

Add code to save, allow delete and add of time servers and currently selected server. The time servers are saved to a standard text file. A default set of servers is provided in case the file is not available.

Add code to save and restore window position. Also provide minimize button.

Improved the time setting feature.

It is a win95 applet. Happy Holidays.

If you get a chance, please e-mail you thoughts.

Got any ideas for new freeware ham applets?

Thanks & 73,
Jim

Rec.Radio.Amateur.Policy and Misc are overloaded with the CW debate issue --- hundreds and hundres of them daily!!! Thousands of them per year. Now we see them here --- why -- has nothing to do with DX.

Good grief guys & gals -- you are entitled to your opinion --- but do we have to load rec.radio.amateur.dx with it also.

Many of the posters spam it to every amateur use group (over and over again)!!!

Would be in our best interests to keep rec.dx devoted to DX subjects.

Please give this due consideration.

My 2 cents worth

With such a statement as that, you just told me you don't know what the heck your talking about Mr Powers.

It's a well know tactic though and even works on some airheads or people who will take unsupported statements at face value. Convince them that the Bull Dust and Horse Feathers you proliferate is true and it doesn't matter that true case is, huh?

Come back here and try to tell me that CW and HF are dwindling once we hit the sun spot peak. You and your pack of CB hopefuls will be in the same place your were at the last sun spot peak. Away from all the Hams because its too crowed. I know, I was there and it will be even more crowded this time around. But you don't have to believe me, time will be the test of it all Good Buddy.

Did you know there are still several countries where they shoot people for making illegal radio transmissions? Take your little old CB with you and head over there to Africa. Make a tour of the continent with it and see what happens when you try that "Freeband" crap. Then try and sell them the story you just tried to sell here. Know what they will say? Ten-4, you gone!

Or you can just stay over here where it is nice and safe and spew that unfounded Rhetoric. But I'm sorry to say my friend that you will still be one of those "Hopeful & Wishing" CBers even after this next cycle is headed south. But Ham Radio could use someone like you with your enthusiasm. Join the Group, make it better, work within the frame work set up to handle the problems. You will have accomplished something worthy of note then.

Ronald sezz:

> Hey Amor, have you ever tried to work 40 meters in the evening?
> Get real and get with the program for a change!

Some of the most fun CW DXing I've had is on the low end of 40m. But it's the International Broadcast stations in mid-band that create most of the havoc on 40.

The fact is that USA amateurs are restrained from free range within the bands by choke chains and fences. Maybe that's because many of them are like packs of big bulldogs. Also, it makes it easier to hear the phone DX when the bulldog pack is restrained on the other side of the frequency fences. Each layer of frequency mode fence has fewer bulldogs on it. The primary fence builder was The League. But even with an extra, I still have a fence which artificially separates me from the "outside world". 20m is a good example. One part of the band has an SSB sig every 1.8kHz. With some freqs being time/space division multiplexed by signal strength and propagation. But you go below the "fence" and it's like somebody pulled the plug. And there you find a VE6 chatting with a VU2 in the clear with +/-3kc of space around them.

You are conditioned to accept the fences. Many of today's present HF active hams have never known a fenceless band. But I started my ham life in an area of the world where there was no frequency fence. Try it sometime. The fresh air will do you some good.

Could you break it out by income and cost per station as well as DXCC?
Then a matrix for cost per DX QSL card?
Then the adjusted Who's Who would be the lowest dollar (or whatever
monetary unit) per QSL.

Got me on that one Walt.
I'll not post here again, honest!
That is -- until I see another CW Debate post (:-)!!

Gee, for someone who professes to know all, you really are quite thick.
I suppose you don't know how to look things up in books?? You know
books, pages made of paper, have letters printed on them...

you've made some really stupid posts before, until now, the one about
wanting to modify your radio to say hello to your police friends, but
this is now a new high in M@S@ stupidity

Since you didn't specify what type of antenna, one can only assume your
are looking for a dipole SO...

to determine the length (in feet) of a 1/2 wave dipole

divide 468/freq in MHz IE: 468/28.410 = 16'5" approx.
a 1/4 wave of that would be approx. 8' 3"

Remember slimeboy or slimeball or whatever, that this represents the
entire length of the dipole, not each leg.

Your postings are unrelated to DX and of no value to the news group.

Stop wasting our time! If you don't like CW, DX, or Ham radio in
general, fine, who cares.

Keep your comments on 'rec.radio.policy' where they belong.

Steve..AI7W

SB DX @ WW $OPDX.336
Ohio/Penn DX Bulletin No. 336

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 336
BID: $OPDX.336
December 22, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1HRW, W1EKT, WB2RAJ/WB2YQH & The 59(9) DXReport, W2CE, K4MD, K4ZW, KI4RU, N6RT, K8JP, K8YSE, DL3KUD, F6AJA & LNDX, HB9HFN, JA6VZB, LA4KQ, OH2BVE, OK1KT, VA3DX, VK4AAR and VE9AA for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday and Season's Greetings". Also, we would like thank the many who have contributed information over the year (there are too many to list). Without them there would not be an OPDX Bulletin.

8P, BARBADOS. Glenn, VA3DX, reports to OPDX that he will be active again as 8P9DX, from January 18th to February 1st. His time and activity will included the CQ 160 Meter CW Contest (January 23-25th). He will be active on all bands. QSLs should be sent to VA3DX or VE3ICR and not to the 8P QSL bureau!!

CU1, AZORES. Matt, DL3KUD, will be going here again between December 29th and January 7th. He will be active from Santa Maria Island (IOTA EU-003) as CU1/DL3KUD. His planned operations will be on the Low-Bands (especially 160m) and the WARC bands. Activity will be on CW and probably some RTTY (his first steps in RTTY, please be patient!). His suggested frequencies (+/-QRM): 1834, 3504 (QSX 3527), 7004, 10104, 18074, 24894 kHz. QSLs will be answered via bureau. If possible, do not send any QSLs direct.

DXPEDITION PACIFIC 98' is what the main sponsors (ALCATEL CZECH and the Czech DX Foundation [OKDXF]) are calling this operation. Members of the OFDXF will be heading for the multi-stop trip to the Pacific with the following itinerary: Departure is from Praha
Feb 18 - to Frankfurt and the same day land in Los Angeles
Feb 20 - from LA to Papetee/ Tahiti

Feb 24 - from Papetee to Rarotonga and the same day flight to
Aitutaki atol
March 4 - from Rarotonga to Tonga via Nadi (the same day)
March 14 - from Tonga to W. Samoa
March 23 - from W. Samoa to Fiji
April 1 - from Fiji to Hawaii and then to Europe.
If possible, the group might divide during the stop on Western Samoa and try spend few days on American Samoa. Operators will also have a license for Rotuma Island, but due to transport problem, nothing is sure. The operators will be OK1TN, OK1KT and OK1VD. They will be equipped with PAs as well as beams for the WARC bands and 20-10 meter and a vertical for the 40 meters band. If possible, at least two stations will be on the air. Callsigns will be announced later, and a all mode operation is expected on the usual DX frequencies. QSL information is via: OKDX Foundation, P.O.BOX 73 Bradlec, 293 06 Mlada Boleslav, Czech Republic. ADDED NOTE: During the process of planning there appeared a possibility to activate Midway Island for a week or ten days. Unfortunately, it could not be possible without additional charges (not very high - it is only a hop from Hawaii), so any donations would be very appreciated.

HB0, LIECHTENSTEIN. Kazik, DL2SBY, will be active from here December 27th through January 3rd. He will be active on both CW and SSB. Check the DX Nets on 14226 or 14247 kHz. For CW, look for him at the bottom of the band edge. QSL via homecall.

HP, PANAMA. Gerard, F2JD/HP1XBI, is headed back to France after more than 21000 QSOs. He will be back in Panama in the middle of January for two more months.

IOTA NEWS. Herve, F5RMY, and some other operators will be using the callsign TM5CRO from Porquerolles Islands (IOTA EU070) from January 14-20th. They will be active on CW and SSB from 160-10 meters. QSL via F5RMY.

IOTA SURVEY BE CONDUCTED. Chris, N1HRW, reports, "The Islands on the Web Website is conducting a web-based 'Top Needed IOTA Islands' Survey. This survey will be used to generate a list of the most needed IOTA islands in the world and the percent of IOTA chasers needing them. IOTA Chasers can take part in the survey by filling out a form on the IOTW website at: http://islandchaser.com (go to the "Survey" section of the site). The IOTA need list form can be E-mailed to "n1hrw@islandchaser.com", or send the list to Chris Taron N1HRW, 607 Harwood Ct., Champaign, IL 61820. The survey has been ongoing and runs until 0000z January 10, 1998. Survey results will be displayed on the site on Jan 10.

NEW OFFICIALS. The Carolina DX Association held elections for 1998 at their annual Christmas dinner and meeting. The following will serve for 1998: President - Joe Simpkins, K4MD; Vice-President - Cliff Wagoner, W4WN and Secretary/Treasurer - Gary Dixon, K4MQG. Also, serving the Club for another year as the editor of their monthly newsletter will be Don Daso, K4ZA. The Pileup, their newsletter, is on the internet at the

URL address: http://www.cdxa.org

QSL INFO AND NEWS.....
Fernando, EA4BB/D2BB, reports to OPDX that the QSL route for D2BB is now Joe, W3HNK. He states he will be sending him all the logs and will keep on doing so in the future.

SPEAKING OF JOE! Joe, W3HNK, recently gave Doug, N6RT, a list of all the stations he handles QSLs for. Hope this will be useful for everybody: 1X5AA...4S7DA...AP2TJ...BV2BI...C51A...CM8TW...CO8TW... CO5GV...CO3CL...CT1BOH...CT4NH...CW6V...CX5X...CX6VM...D2BB...EA8AK... EK6GC...ER5GB...ER5WU...ES5MC...EW1TZ...EW3LB...EY1ZA...FM5BH...FS5UQ... HL5KY...HL5BTF...HR1SAX...KP2A...KP4KD/HK3...NP3D...NP4A...OM7DX... P3A...P40E...PJ7UQ...RA2FZ...RA9CKQ...RW9WA...RW9QA...RW9RF...RX9FM... RA0FU...RS0F...SM7CRW...TG9AWS...TE1C...TI0C...TI1C...TI2CF...TI3CF... TI4CF...UA9CUA...UA9OS...UA0AZ...UA0MF...UA0FZ...UK7F...UK8FF...UK8OO... EZ8AI...UN5J...UN7FK...UN7FZ...UP6F...UP0F...US7ZL...US0HZ...UT5JDS... UG6GAW...VP2VFW...VP5JM...VP9AD...VU2ZAP...WP4C...YO3AC...YS1RRD... Z24S...ZP5PT...ZS4PB...ZP0R...ZP0Z...

N4BQW/KH5 PALAMARA QSLS. Mac, WA4FFW, reports that the cards received to date for the recent operations are in the process of being verified, and it is expected that all cards will be mailed by the middle of January and should be in everyone's hands certainly by the end of January. It is apparent that Chuck had some help in the form of a pirate. Mac reports that he has observed cards for days Chuck was not on Palmyra Island. Chuck did not operate from Kingman Reef, so contacts with N4BQW/KH5K are definitely no good. Mac asked for everyone to be patient as this is the Season and everyone is very, very busy. (TNX Mark McIntyre)

QSLs for JW5VK, JW1BJA and JW4KQ, which were active during December 12-15th to Svalbard, Spitsbergen Island (IOTA EU-26), the Longyear Town, should go to the following QSL Managers: JW5VK and JW1BJA via LA5VK; JW4KQ via LA4KQ.

QSLs for the recent JY8ZW operation go via K4ZW (ex KE9A):
Ken Claerbout, 10 Clover Hill Dr., Stafford, VA 22554

Z21AV CORRECT ROUTE AND ADDRESS REPORTED. The correct address for this station is: Ron Peacock, POB 631, Kwekwe, Zimbabwe, Africa

CY9AA QSL CARD STATUS. Mike, VE9AA, reports in a brief note that all the artwork, pictures, etc. have finally been done up and couriered to their QSL-card sponsor, WJ2O, a couple of weeks ago. Mike states, "Dave is likely very busy during the holiday season, so please be patient waiting for your CY9AA VHF & HF cards. Once I get them back from Dave, I intend to work on them every weekend I am home. I am presently attending college AWAY from home, so I won't be able to get them out probably as quickly as I would like, but they'll get out eventually. (FEAR NOT!)"

VK0ANARE (Revised route again!). Alan, VK4AAR, informs OPDX that Tom Stokes, VK0ANARE, has now returned to Australia from Macquarie Island, and regrettably, he has made a sudden decision to handle his own QSL cards for that operation. Alan states, "I have no control over his decision (which I suspect are a bit rash). I hope the DX community will be able to keep up with his changes. I will send him all the requests that have already come to my address, there is no need to re-QSL! Effective IMMEDIATELY the address for VK0ANARE is: Tom Stokes, c/o VK1AUS, POB 2063, Kambah Village, ACT 2902, Australia." Alan is still the manager for VI0ANARE. They are totally separate operations. VI0ANARE was from 1st July 97 until 23rd October 97. VK0ANARE was from 25th October to 31st October 97. The direct address for VI0ANARE is: Alan Roocroft, c/o Post Office, Dalveen, QLD 4374, Australia (Bureau cards go ONLY to VK4ARB....not VK4AAR!).

SOUTH PACIFIC DXPEDITION. Cedric, HB9HFN, informs OPDX that he and HB9DLZ will be active from Tonga and Western Samoa. Details are as follows: From Tongatapu, they will be there from February 5-10th and sign A35LZ (HB9DLZ) and A35FN (HB9HFN). From Western Samoa, they will be there from February 10-23th and sign 5W0LZ (HB9DLZ) and 5W0FN (HB9HFN). They will be especially active for Europe and mostly on CW (80-10 meters). QSL via home call (via bureau preferred). For more details see: http://www.qsl.net/hb9hfn/

T88, BELAU (SSTV activity). Tosy, JA6VZB, is planning to be active as a Mobile SSTV station during the SSTV contest (January 2-3rd) as T88JA. The contest exchange is: send your original picture and serial number. QSL via bureau to JA6BSM. (PLEASE send it via bureau. Every QSL will be submitted to bureau.)

TG, GUATEMALA. Toni/OH1TD, Heikki/OH3JF, Hessu/OH6XY and Raija/OH7LIX will be on the air from January 18th to February 5th (1998). They will arrive in Guatemala on January 16th, and their flights back are on February 6th. They will possibly be assigned with the TG0OH callsign (to be confirmed later). They will always operate split and suggested operating frequencies are as follows:
CW - 1827, 3507, 7007, 10103/10108, 14007, 18077, 21007, 24897 and 28007 kHz
SSB - 1840, 3789, 7045, 14195, 18145, 21295, 24945 and 28495
RTTY - 14088, 21088 and 28088
For lowband operators, the following sunset and sunrise times apply during their DXpedition to TG-land: sunrise between 0033-0030z and sunset times 1149-1158z. Their equipment includes: IC-730, IC-735, IC-751 and TS-690. Linear amplifiers are Heathkit SB-1000 and Tokio HI-Power HL-700B. Antennas will be 2 phased HF2V's - like in XF3/OH3JF expedition where their 80m signal in Europe was very strong with this antenna set-up. In addition they have a Cuscraft X7, A3WS and R7000. For top band they have two antennas and for some other purpose G5RV. They will operate from SanBenito which is at the lake, Lago Peten Iza. This QTH is on the northern part of Guatemala, and there is a clear view over the lake towards Europe, as the stations will be located by the lake. QSL via the bureau or direct to calbook addresses: RTTY via OH6XY and CW/SSB via OH3JF.

V2, ANTIGUA. Operators Bob/AA1M, Jim/W1HL, Tim/KA1MID and Mike/W1USN have plans to vacation and operate from Antigua from February 23rd to March 2nd (1998). They currently have not been issued callsigns. QSLs can be sent direct to each Op or via bureau.

V31, BELIZE. Joe, K8JP, and his XYL Beverly are currently on the road driving to Belize and expect to arrive around December 23rd. If all goes well, he states he will start operating as V31JP on Christmas Day, December 25th, and run through January 12, 1998. He plans on participating in the "Stew Perry Top Band Challenge" (December 27-28th). Outside of the contest, he will be on mainly 160, 80 and 40 meters. Look for him on 1827.7, listening up 2 kHz. When the band is open to Europe or Asia, he states that he will give them priority. The same applies to 80 and 40 meters, 3507.7, 3527.7, 7007.7 and 7027.7 kHz, listening 2 kHz up when the band is open to Europe and Asia. He will operate some 75 meters SSB in the DX window. Joe will be checking/moving to 160 on the half hours. He suggests that when working him on 40 or 80 meters tell him that you would like to work him on 160 meters before he goes to 160 meters. Please QSL via his new address: Joe Pontek, Sr., 26441 Devaney Rd., Arcadia, IN 46030, USA.

V4, ST. KITTS. Halvard, LA7XK, will be active in the first of the new year (January 4-17th) as V47XK. Look for activity during his mornings and evenings. QSL via homecall.

Actually, Steven, I am an avid CW DX chaser.
The posts you refer to are on-topic for DX in their original form. It is mostly the subsequent posts to the thread which create a thread which becomes off-topic. Check it out, I think you will find this to be the case. By the way, who hired you for the Usenet Police Force?

Brian:

I would check out a program called SmartLog, which seems to be especially aimed at DXers. Plus, it's a Windows program so that should not be a concern. (the other one you mentioned, like most, is a DOS prgram that can run within Windows)

I think they have a web site, www.lumisoft.com(?).

Good Luck

Jim

3310. Take a short time-out for the children

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-22 00:00:00 UTC

In this season of hope, unfortunately the news on
our TV's and in our newspapers reminds us daily
of those who seem to have so little reason for hope.

The most heartbreaking reminders are images
of the children; the starving skeletons in Africa,
the orphaned, wounded and homeless in eastern
Europe, and so many others here and all over the
world.

Please take some small moment during this holy
season to pray for these little ones who most
desperately need the gift of hope.

In this spirit Colleen and I wish to share with
you the verses below. (With apologies to the author,
Ina J. Hughs of the Children's Defense Fund, for my
amateur adaptation.)

73, de K0HB & N0PGL

A PRAYER FOR THE CHILDREN

Please pray for all the children, but especially those -
who stare at news photographers from behind barbed wire,
who can't run down their street in a new pair of sneakers,
who never play "hide and seek",
who are born in places where we wouldn't be caught
dead (but they too frequently will be),
who never go to the circus,
who live in an X-rated world.

Pray also for those -
who sneak popsicles before supper,
who erase holes in math work books,
who can never seem to find their shoes.

We pray for children -
who bring us sticky kisses and
fistfuls of wilted dandelions,
who hug us in a big hurry and forget
their lunch money.

And we pray for those -
who never get dessert,
who have no safety blanket to
drag behind them,
who watch their parents watch them die,
who can't find any bread to steal,
who don't have any rooms to clean up,
whose pictures aren't on anybody's dresser,
whose monsters are real.

We pray for children -
who manage to spend all their allowance
before Tuesday,
who throw tantrums in the grocery store and
pick at their food,
who like ghost stories,
who shove dirty clothes under the bed and never
rinse out the tub,
who get visits from the tooth fairy,
who don't like to be kissed at the school bus stop,
who squirm in church,
whose tears we sometimes laugh at and whose
smiles can make us cry.

Pray extra hard for those -
whose nightmares come in the daytime,
who will eat anything,
who have never seen a dentist,
who seem to have the wrong color eyes
or hair or skin,
who aren't spoiled by anyone,
who go to bed hungry and cry themselves to sleep,
who live and move, but have no being.

And pray for the children -
who want to be carried,
and for those who must,
for those we never give up on, and
for those who won't get a second chance.

Pray for those we smother in love -
and for those who desparately grab the
hand of anybody kind enough to offer it.

- - -

That works, and hams were doing that 60 years ago at 45.45 baud, but 74
years ago Nyquist published a paper showing that there's a 6 db advantage
to be gained by using mark/space instead. Hams have been a little slow to
pick up on that. Irv Hoff was the first to show hams how to take full advantage
of that 6 db 40 years after Nyquist's paper was published. Some hams still
haven't caught on.

MFJ 1274 packet TNC with original box, docs, cables, set for Kenwood radios in like new condition. Also a really nifty, very high tech terminal. It's a Microterm 5520. It is composed of a flat screen monitor and a keyboard. It has a built-in cmos which you enter with a keystroke where you can change literally a couple of dozen perameters. Unless you want to download something (??), a computer is not necessary. This works just great and can be left on at all times (has built in screen saver). Both for $85. Jerry @ 908 233-2511 or email. wa2gfo

3322. Re: what means RST 599?

Source record: 30829

Jay,

Most all contest software allows you to change the RST although 599 is used by almost all contest stations. In fact if you send other than 599, you force the operator to go back and edit the QSO. This costs him/her time. What's important for all stations is to properly copy and record the data exchanged. I can see QSOs being deleted from a contest station log if they received 579 and logged 599. This assumes that the station passing out the 579 submits an entry or check-log.

On a personal note, I always log what I receive even if I think he's wrong. I worked some of the 9A contest last weekend and heard US stations sending zones 4 & 5. The 9A contest exchange was RST and ITU zone. I even heard the 9A station trying to correct the US station. He kept asking: ITU zone? The US station just kept sending 5!

This creates a problem for the contest station--if he worked just the one station that reported zone 5, does he claim it as a multiplier? I would not, but would most likely take the QSO credit.

I give out decent reports during non-contest periods and stick to 599 during contests--except QRP contests, where they use 559.

Happy Holidays es 73 de Tom, K4NR

This "bad" habit comes from Contesting Programs like CT, Log-EQF etc..
You have a predefined field with 599 and it is easier to send that as
a report. If you wanted to send something else you would have to Tab
to the RST field and edit which is a loss of time.

If the station on the other side gives you a report that is NOT 599 it
is also a loss of time and I am not surprised that some complained.

I personally don't think that a contest is for purists who want to
report key clicks or other keying problems, there is plenty of time
for that outside of contests.

I will never report keying problems :

1. Unless the guy is drifting >1 or 2 Khz when keying.
2. His rig is going crazy and could be damaged
(RF feed back or batteries down in Field Day)
3. If the guy is from some countries known for using home made
equipment like CO and East bloc countries.

Its not their fault, they are trying their best and using what they
have.
When we, the lucky ones who got surface mount microprocessors in our
rigs,
tell them that they are drifting we are just reminding them of their
condition
and they know that already. This is unnecessary cruelty

I found this out the hard way in my first contest. I was giving out
honest reports during the contest and confusing the hell out of the
operators. I caught on pretty fast only to have a few others who then
gave out honest reports! Live and learn. Everything is now 59/599
during
contest even if they have to repeat it a few times :-)

Agree--got my Tech Plus after just 8 days and upgraded to extra within 90 days. Used MA to get the 5 wpm. Then got on the air--made QSOs daily. Used MA to gauge my progress and push me just before a test session. Passed the 5 wpm the first time, 13 wpm took two tries, and 20 the first time.

I am looking for some information on how to build a keying circuit to use the audio output of one radio to key another radio and retransmit the audio. Sort of like a cross band radio does only I am going to use two diffrent radio. Spacifically I am using an HTX-202 for the reciever and an HTX-404 as the transmiter.

Any information you might have would be helpful. Please E-Mail them to brad@dialnet.net

Thank You.

Shenanigans Not The web page setup to report unusual propagation called the CAROS project has an interesting entry from Ted Cohen N4XX a highly respect expert on propagation in amateur radio. It seems Ted caught an opening between the East Coast and Japan in the predawn hours of Dec 25 on 160 meters. (1.8Mhz and 1.9Mhz) He worked several stations with a signal report of S7. Although the report didn't state as such I'm willing to bet it was a long path openning. I wouldn't be surprised if you stumbled across the same thing on 75. What you may have heard could have been broadcast directed at US military service personnel. This is only conjecture. Ted also made mention that the same phenomenon did not repeat itself on Dec 26. CAROS stands for Coordinated Amateur Radio Observation System http://solar.uleth.ca/solar/www/caros.html

>Part laziness, part ego reinforcement, part stupidity.

(most) Contests are all about rate - how many stations can be worked
in a limited period of time. I suppose typing a few extra characters
into a log doesn't seem to take a whole lot of time -- but collected
through the length of the 'test, it can be enough time to cost a few
QSOs. That could be a big deal for the people who don't get worked.
(it won't bother the contester that much)

Besides, in my experience in the average domestic contest, almost
everyone *is* 59/599. Even in DX tests, S9 signals are a lot more
common (at least at larger stations with real antennas) than one might
think.

I do make a point of giving an honest report if a station is less than
T9. Not many people (either outside or in contests) understand the
K/C stuff for clicks & chirp; it's better to just say "you have
chirp"..

I thought the purpose of including signal reports in the exchange
was so that information which wasn't known a priori would have
to be passed. If everyone is just going to use 599, then that information
is a priori known, and doesn't do anything to prove an actual exchange
of information occurred. So what's the point of sending it at all?

Gary,

Most contest exchanges can be looked up in the callbook or other resources. Most ARRL contests are RS(T) and ARRL Section. State QSO parties are RS(T) and County (in-state) and State or DXCC country (out of state). CQ WW is RS(T) and CQ zone. I like the European contest--the exchange is RS(T) and serial number--you can pass and receive QTCs to other stations for points.

Contesting is like most other aspects of amateur radio--some like them, others do not. While I really enjoy a good ragchew, contests allow me to work places I could not during non-contest periods. I'm antenna restricted and contesters (the really serious ones--ever seen pictures of the antenna farm at KC1XX?) have great antennas and will dig you out of the noise, especially near the end when they need the QSOs. I even managed to work DXCC with a 14 foot wire in my attic--most of it on 40 meters.

If the QSOs are in both logs--it most likely happened. If I don't hear the exchange, I don't log it--I'll go back and try again later. I also submit logs on most contests I work. I can't win, but the log serves as a means for the contest organizers to check the other logs for accuracy. Most casual contesters are just looking for a couple of "new ones" for DXCC and don't bother with the logs

The ARRL Operating Manual shows DS belonging to South
Korea.

QTH is probably Seoul (..- not .- :-), the capital
city.

. ======================
*** The Daily DX ***
======================
Volume 1 Number 194
December 24, 1997
Edited by Bernie McClenny, W3UR

----------------------------------------------------------------------

Headlines

----------------------------------------------------------------------

Hiroo, JA2EZD, is now operating from the island of Guadeloupe as
FG/JA2EZD and will be active until 2 January. He is operating from
FG5BG's station. Next he will go to St. Lucia to activate J69JW from
2 to 7 January. From there he will go to Barbados to operate as
8P9AC from 7 to 10 January. Last week he was active as KP4/JA2EZD
and VP2EZD. QSL all via XW2A.

Jordi, EA3GBU will be active from Ecuador as HC/EA3GBU from 25
December to 8 January.

A group of three Americans will be active from Turks & Caicos from
16 to 23 January. Operators Randy, N0TG, Murry, WA4DAN, and Ronald,
AA4VK will operate with their home call /VP5. Emphasis will be on
CW on all bands. QSL via N0TG.

Kazik, DL2SBY, will operate from Liechtenstein as HB0/DL2SBY from 27
December to 3 January on CW and SSB. QSL via DL2SBY.

Dimitris, SV2YC, works for the bank of Thessalonique in Northern
Greece which maybe opening a branch in Mount Athos in March 1998. If
he does get assigned to that location he will try to obtain a license
to operate.

Bob, AA1M, Jim, W1HL, Tim, KA1MID, and Mike, W1USN plan to operate
from Antigua from 23 February to 2 March. They have not received
their calls at the moment. QSL via home call.

The Carolina DX Association recently held elections for the 1998
officers which include:

President Joe Simpkins K4MD
Vice-President Cliff Wagoner W4WN
Secreatry/Treasurer Gary Dixon K4MQG
News letter editor Don Daso K4ZA
```

For more information about CDXA see their home page at
http://www.cdxa.org

Matt, DL3KUD, will once again head to the Azores to operate as CU1/DL3KUD. He will be active from Santa Maria Island (IOTA EU-003) from 29 December until 7 January. Matt will put an emphasis on the low bands along with 12, 17, and 30 meters. He will mostly be on CW but will try RTTY. Suggested frequencies are as follows: 1834, 3504, 7004, 10104, 18074, 24894. QSL cards should go via DARC bureau.

Look for Bob, W2KKZ, to be on the air as J7/W2KKZ form Dominica from 1 to 8 March. He will be on 10 through 80 meters CW and SSB. QSL via the bureau.

Seasons Greeting from the editor

We wish each of you a Merry Christmas, Happy Hanukkah and a Happy New Year. We hope that 1998 will bring lots of new ones for each of you. During this holiday season the following schedule will take place for The Daily DX:

December 22 Number 192 December 29 Number 195
December 23 Number 193 December 30 Number 196
December 24 Number 194 December 31 Number 197
December 25 No Daily DX January 1 No Daily DX
December 26 No Daily DX January 2 No Daily DX

73 and Good DX de Bernie, W3UR, Becky, N3OSH, Christa and Kyle.

QSN

9V1YC - SINGAPORE - James showed up on 10103 around 23:50Z. He worked a few Europeans and was heard on the East Coast of the US. QSL via AA5BT.

BD4ED - CHINA - Was working Europeans on 10105 from 23:15 to 23:40Z.

C56/JA1OEM GAMBIA - Mako is back here unexpectedly and was active on 18085 from 13:00 to 17:00Z yesterday. QSL via JA1OEM.

H44IO - SOLOMON ISLANDS - Holger was busy working US stations on 7007 from 11:30 to 13:30Z. QSL via DL7VRO.

H44IQ - SOLOMON ISLANDS - Birgit (YL) was found on RTTY on 14088 at 08:30Z. QSL via DL7VRO.

HV4NAC - VATICAN - Was active on 3795 from 22:00 to 00:00Z.
QSL via IK0FVC.

JD1BIY - MINAMI TORISHIMA - Look for this station on 1910
around 12:00Z.

PY0FT - FERNANDO DE NORONHA - Was working JA's and
Europeans from 08:45 to 09:45Z. He was
transmitting on 14120 QSX up 10. He said to QSL via
JA1ELY.

V85HY - BRUNEI - Hiro worked a string of East Coast US
stations yesterday on 30 meters. It started just
before 16:00Z on 10108.

VK9XU - CHRISTMAS - Mirek's reported activity yesterday was
as follows:

Freq.	GMT	Freq.	GMT
21230	01-02	7004	15-16
18130/18078	09-10	14004	23-00
7004	15-16		

XU2FB - CAMBODIA - Harv is the only permanent ham in this
semi-rare country. XU3FLT and XU2A show up
occasionally. Harv was active yesterday on 14197
around 12:00Z. He is active on both SSB and CW,
mostly on 20 meters. QSL via N4JR.

ZA1MH - ALBANIA - Mike was active on 3744 listening up on
3808 yesterday from 05:30 to 06:30Z. He was working
all across the US including West Coast stations.
QSL via Z32KV.

IOTA

The following IOTA stations were active yesterday.

3360. RNZI needs extra 100kw transmitter -- low sunspots...

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-27 00:00:00 UTC
From: "M. Hackett" <mikehack@u.washington.edu>
Message-ID: <Pine.A41.3.96a.971227164131.12332C-100000@dante08.u.washington.edu>
Source record: 30917

RNZI needs extra 100kw transmitter -- low sunspots...

When RNZI was launched, it was possible to hear it boom

in the 21mhz band... now to even recive it at all -- or

even the HI / USA SW broadcasters is a dream in the

Seattle / Vancouver BC region. It is sad as a 100kw transmitter

only costs 500,000 USD -- and buys valuable redundancy.

I am amazed that no attempt has been made for amateur use of
spread spectrum on SW bands...

3362. 80 meter DX antenna

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-27 00:00:00 UTC
From: ve7oso <ve7oso@yahoo.com>
Message-ID: <34A6067E.7A2B@yahoo.com>
Source record: 30919

I would like to make an 80 meter antenna out of an aluminum mast that is approximately 65 feet tall. Since I will cement one end of the mast into the ground, what would be the best way to feed the antenna? Would I be better off with a sloper or an inverted V that would get the current point of the antenna up above the house and barn and other obstacles? Thank-you for your help.
73, VE7OSO

Thanx for the lead, in which case, I really CAN believe my ears; the
propogation gods are smiling on me because I have been reeling in some capital
signal over the holidays.

My only hope though is that 75/80m doesn't get shredded to pieces by the
regulatory bodies like 40 has.

Ed.

Yeah, a serial number does add an a priori unknown element. Otherwise,
the only things unique being exchanged are call signs (assuming contacts
are made randomly).

>Contesting is like most other aspects of amateur radio--some like them,
>others do not. While I really enjoy a good ragchew, contests allow me to
>work places I could not during non-contest periods. I'm antenna restricted

>especially near the end when they need the QSOs. I even managed to work
>DXCC with a 14 foot wire in my attic--most of it on 40 meters.

I don't contest much anymore, except for Field Day (yeah, a preparedness
exercise, not a contest). But I'm not a contest hater. However, if you're going
to game, there should be some meat to the game. Adding a priori unknown
elements to the exchange helps assure you *really* were in communication
instead of just crossing in passing. Formalisms like a RST which is always
the same just wastes time to no purpose. It seems to me that exchange
elements should actually be a priori unknown, or just limit the exchange
to call signs and call it a day.

Once upon a time, RST was supposed to mean something. It was a way
of seeing how well you were getting out to various locations. It served as
a check on your station's performance. But with a constant RST, that
benefit is lost. In other words, RST no longer is serving any purpose at
all in a contest exchange.

So my point is, should RST be eliminated as an exchange item? Or
should we go back to giving honest RST reports? And further, I guess,
is a "honest" RST really of any value in determining station performance?

Amor Powers wrote:
> With CW and HF Amateur activity dwindling, isn't it about time we stop
> giving Special Rights to CW at the expense of voice modes?

I thought it was the other way around ..... every time I listen to CW bands, it seems that it'd be hard to get a word in edgewise, but people always do. The voice bands, in comparision, seem to have people queued waiting for the channel to clear along with the half-dozen people trying to hold a voice conversation, or worse, events degrade into who wants to waggle the largest amplifier/antenna array in everyone's direction .....

> Special Rights should no longer be needed! Once assimilated into the
> bands homogeneously, CW will be able to get through the QRM just fine,
> since it is such a "Superior Mode". Our sovereign rights in the USA to
> the international DX phone territory have been denied us for too long.
> We burn for the freedom already enjoyed by other hams of the world.

Voice should be able to get by with a smaller allocation as well, and if it can't, well, there's packetized voice to look forward to. I think we could live with trimming some of the phone allocation to provide more data and CW allocation ..... especially if we use some of that allocation for packetized voice. At the very least, this would help get rid of the "my linear's bigger than your linear" fight on certain parts of 80m .....

> Equality, parity, and total integration for all modes!

Liberte, egalite, fraternite? Yeaaaah, right ..... you want freedom, buy a set of paddles or a straight key and get to learning code instead of illustrating ignorance .....

>the same just wastes time to no purpose. It seems to me that exchange
>elements should actually be a priori unknown, or just limit the exchange
>to call signs and call it a day.
>
>Once upon a time, RST was supposed to mean something. It was a way
>of seeing how well you were getting out to various locations. It served as
>a check on your station's performance. But with a constant RST, that
>benefit is lost. In other words, RST no longer is serving any purpose at
>all in a contest exchange.
>
>So my point is, should RST be eliminated as an exchange item? Or
>should we go back to giving honest RST reports? And further, I guess,
>is a "honest" RST really of any value in determining station performance?
>

we have some variations on contest reports:
1) RST + QSO NR + word (where this word may be abbreviated county or
WW-locator, sometimes QSO number is not used)
2) RST + NR + an abbreviation, where the last received word is sent to
next station
for 2m/70cm aurora the report for either ssb and cw has an A, 55a, the
third letter is always A, because it is no tone (sounds on cw like
keyed white noise)

OH8TA will activate Hailuoto island EU-126 in 6-8 February 1998. Working begins about 1600 UTC in Friday and lasts to Sunday afternoon.

We concentrate on 20m activity (SSB / CW) but work other HF/VHF/UHF bands as well. RTTY / AMTOR are possible modes too.

QSL via buro is preferred.

Team consists about 10 operators. Main antenna is ex-MF/HF marine vertical, about 20 m long. It's situated in sea shore. Linear amplifier is used in 20m / 160 m operation. If you have any questions/schedule asks don't hesitate to mail

We were working in same place in last August. Chechk www-pages (containing a lot of pictures with Finnish texts)

Hi,
I worked 3D2QB a few days ago; also found to qsl via an SM3.
My questions are:
1) Is this legit? (have not seen anything in the DX bulletins)
2) If legit, what island- Fiji, Raratonga??
Tnx

Looking at an Icom Band limits chart, you can essentially operate CW
anywhere (if you are an extra) from 14 MHz to 14.350 MHz. There are
SSB/SSTV/Fax limitations, but it would seem that CW may be used anywhere

SB DX @ WW $OPDX.337
Ohio/Penn DX Bulletin No. 337

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 337
BID: $OPDX.337
December 29, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W3UR & The Daily DX, KV5V, KG6AR, W7TSQ, AH0W/OH2LVG, CX7BY, DJ5AV & DX News Letter, G3NUG, G3SXW, G4BUE & DX News Sheet, JA1ELY, LU1DZ, OH1BOI, SM0AGD and ZS6Y for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". Also, we would like thank the many who have contributed information over the year (there are too many to list). Without them there would not be an OPDX Bulletin.

4F, PHILIPPINES. Look for Arie, PA3FWG, to be active from January 1-20th, as 4F1UFT. His frequencies and modes activites are unknown at this time. QSL via home call.

9N, NEPAL (Plenty of activity from here!). Kazu, JA8MWU, will be in Kathmandu on business and also on holiday from now until January 10th. Kazu hopes to operate as 9N1WU in his spare times. Look for him on all bands, mainly SSB. QSL via P.O.Box 1214, Kathmandu, Nepal (direct only). Don't send to JA Bureau.
15 members of the "Japan UNCEF Ham Club" members will be in Nepal on a study. They report that this is not a DXpedition, but they will be there until January 13th. They will operate with their own callsigns. Naoki, JE7RJZ, will be active from Nepal as 9N1JZ (he hopes to receive this callsign) from January 4-10th. Naoki hopes to be active mainly on CW. QSL via JA7FWR
Brad, KV5V, and his daughter, KC5RPK, are currently in Bangkok, Thailand, and will stay in the city until Thursday monring, January 1st. They will arrive in Kathmandu during the early afternoon and stay in Nepal until January 13th. Brad states that he will be able to operate from Dick's (9N1ARB) station using his callsign. Activity will be limited, because they plan to do some local travels and visit with friends in the evenings. When active, look for him on 80/40/20 meters. Brad states

that he will listen for openings to the U.S. on 40m and 80m, and that he will fire up the station at 0100z on 20m and work the path as long as it stays open. Operations will be mainly CW and RTTY.

C5, THE GAMBIA. The "DX News Sheet" reports that Alan, G0SAH, will be active from here until January 9th as C56/G0SAH. He will be using a FT-800AT into a HF6 vertical. Alan may also activate one of the coastal islands (IOTA AF-060). QSL via home call.

L20XSI WRAPUP AND GACW NEWS. Alberto, LU1DZ, GACW Coordinator, provides OPDX with the following: "GRUPO ARGENTINO DE CW NEWS". The GACW reports the five day operation of L20XSI, the GACW 20th Anniversary station, which was active from Staten Island (SA-049) in the Tierra del Fuego Province (counts for DXCC as Argentina) made 5303 QSOs (4518 CW and 785 SSB). The report states QSLs should be ready in about 30 days, possibly a little more. The report also states that Hector/LU6UO and Ernie/LU4AXV are now active from Deception Island as LU1ZC. They arrived on the island on Tuesday, December 16th, after an airplane and icebreaker trip to the island. This island counts as South Shetlands, and the two operators will be active until the end of February. LU1ZC has been very active on CW on 40/20/15 meters and the WARC bands. QSL to LU6EF or the perferred address: GACW, Box 9, 1875 Wilde, Buenos Aires, ARGENTINA.

NEW OFFICIALS. The 1998 Officers for Western Washington DX Club have been announced. They are: President - W7TSQ, Bob Preston; Vice President - K7BTW, Dick Swanson; Secrectary - WA7BAY, Mike Schone; and Treasurer - N7LSL, Marina Zuettel. The Board of Directors are: W7JEN, Duncan Carman; K7ST, Adam Kerner (exAA7FT); N7TT, John Gohndrone; W7VV, Roger Huntley (ex N7IRR); W7QN, Joe Gregory and N6MZ, Mike Mraz.

PJ9, CURACAO. The "DX News Letter" reports that John, W1BIH, will be active as PJ9JT on all bands between January 10th and March 31st. QSL via W1AX.

QSL INFO AND NEWS.....
Roger, G3SXW, reports QSL requests for 5V7A (CQWW CW Contest, November 29-30th -1997) are all answered and up-to-date. Those still arriving are being handled daily. Roger also states, "This is thanks to the grand efforts of GM3YTS who printed the cards within days of getting home, and especially the Herculean efforts of Tom, GM4FDM, our QSL manager. Splendid job, Tom. Many thanks indeed." Direct requests should go to GM4FDM: 3 King's Crescent, Elderslie, Renfrewshire, Scotland, PA5 9AD. Requests for bureau replies can be E-mailed to him at: wylie@sol.co.uk (Show just your call, date, time, band.) Note that outstanding requests for 5V7A in 1996 continue to go to Bill, GM4AGL, who still has the logs and blank cards. Tom, GM4FDM, is doing QSLing only for 1997. For more details about QSLing 5V7A (and much more) visit their web page at:
http://www.getnet.com/~k7wx/5v7a.html

Chris, KG6AR, QSL Manager for FO8DX states that the FO8DX cards are not back from the printers, and the cards should start coming out

sometime in mid-January.

Jari, OH1BOI, reports receiving a recent letter from RW6HS and the RW6HS QSL Service handles cards for the following stations (direct only): CE2EZE...CT3FF...DU1EIB...FP5EK...KP2J...OD5EH...OD5SE... OD5NO...TA1AZ...TA2AO...TA2EM...VK4SJP...WP4AMS...YV5DEH...ZB2FK... 3DA0BL...3B8FQ...4Z5FW...9H1ED...9H1GY...9H0PJP...4Z5GP...4Z5BZ... 4Z5GV...4Z5DW...4Z5FB...EO6AHG...ER1OO...EX8A...EX8QA...EY7AH... RW6HS asks for a SASE with 2 IRCs per QSL. The address is: Vasil M. Kasyanenko,RW6HS QSL Service, P.O. Box 20, Georgievsk, Stavropolsky, Kraj 357800, Russia. The same address is also the address for the UA6call area QSL-bureau.

ZS6Y reports that no E-mail should not be sent to "zs6y@club42.co.za" because the service provider went "Belly Up". Any QSL request should be sent to QSL Manager KK3S.

RSGB "100 YEARS OF AMATEUR RADIO AWARD". Neville Cheadle, G3NUG, Chairman of the RSGB HF Committee, reports to OPDX that the RSGB has recently announced an award to celebrate 100 years of amateur radio in 1998. The new HF award will be issued for making 100 points during the course of 1998. The award is available to listeners on a `heard' basis. All claims must include a log extract certified by two licensed amateurs or an RSGB affiliated club official and a summary sheet of the points claimed per contact listed by callsign. The press release on the details of this award will be provided to OPDX InterNet Subscribers as an additional bulletin.

RTTY FROM THE ANTARCTICA. Raul, CX7BY, reports his friends Paul, EM1HO, and Roman, VP8CTR, will be active on all the bands in the next ARRL RTTY Roundup January 3-4th from Galindez Island (Antarctica).

SV/A, MT. ATHOS (Possible new operator?). "The Daily DX" reports that Dimitris, SV2YC, works for the bank of Thessalonique in Northern Greece which may be opening a branch in Mount Athos in March, 1998. If he does get assigned to that location, he will try to obtain a license to operate.

T31, CENTRAL KIRIBATI. Norbert, DF6FK, will be active until January 10th as T31BB from Canton Island. His plan of operations in unknown. QSL via home call.

XW, LAOS. Zorro, JH1AJT, has been extended a special invitation to attend the 30th anniversary celebration of Khao Sanpathet Lao (KPL), the Lao News Agency, to take place in early January, 1998. In conjunction with the event, the Special Anniversary Commission has also extended permission for an international team of radio operators to conduct a DXpedition operation from Vientiane, Lao, January 5-13th. The team of operators will include Zorro/JH1AJT - teamleader, Yuki/XW1A, Frank/AH0W/OH2LVG, Shin/JA0DAI, Toshio/JP1IOF, John/SM0DJZ and Erik/SM0AGD. The DXpedition will be an all-band, all-mode, multi-station effort with special emphasis on low bands and CW. Operations will also include an effort on 6 meters and RTTY. Special event callsigns for the DXpedition will be XW30 for CW and XW30A for SSB, RTTY and FM. PLEASE NOTE: The callsigns are XW3-zero and XW3-zero-A. The QSL Manager will be SM0AGD: Erik Sjolund, Vestag.27, S-19556 Marsta, Sweden. Their operating frequencies will be announced at a later date. For more information, check the Midway-Kure DX Foundation WEB site at: mkdxf@aztec.asu.edu

ZK3, TOKELAU. "The Daily DX" states Peter, ZK3PM, who works for the New Zealand government, will be active from Fakaofu Island for the next 2 years. Peter states he is not a DXer and does not have any QSLs cards. It is suggested that if you work him and want to QSL, you may want to send an index card or a generic QSL with all the information on it so he can sign it. The only QSN OPDX could find on him is that he was reported on December 23rd at 0625z on 14260 kHz. QSL via Peter McQuarrie, Fakaofu Island, Tokelau, South Pacific via Apia Samoa.

3380. 80 meter DX antenna

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-28 00:00:00 UTC
From: ve7oso <ve7oso@yahoo.com>
Message-ID: <34A60827.34CF@yahoo.com>
Source record: 30937

I am putting up a 60 foot mast and want to make it into some sort of
good DX antenna for 80 metres, while holding up my other antennas for
40, 20 etc. Since one end will be cemented in the ground, I cannot feed
the bottom as I would with a regular 1/4 wave vertical. What would be
the best way to feed it? Would I be better off (for DX) with a sloper or
an inverted V, since the current point would be high up in the air and
above the house and bard etc?
Thank-you for your help.
73, VE7OSO

3382. VO500JC - Last few days!!

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-29 00:00:00 UTC
From: "Paul J. Piercey" <p.piercey@thezone.net>
Message-ID: <6873kmaeg1@nova.thezone.net>
Source record: 30939
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc

Just a note to anyone still looking for the VO500JC callsign, we'll be operating as much as possible over the next few days. I'll be at the station on the 29th beginning around 1530 UTC and QRV on 20M and/or 15M. We also plan on operating on the 30th beginning around 2330 UTC and possibly again on the 31st at 1530 UTC.

For more info, email me at this address.

Gary,

Agreed--you'll note that the RST was optional on this weekend's 160 Top
Band Challenge. Some sent the normal 5NN, I just sent the grid square.

Source record: 30941

I've started exploring DX on 40 meters and have heard a faint,
continuous CW "V" on 7.003 mhz. My ARRL operating guide says that there
is a beacon in Tokyo on that frequency but isn't there some way of IDing
the beacon? Does anyone know what this is? My QTH is Maryland, and I
was operating at 1100 UTC.

Hello,
and thank you for taking the time to read this .... I would
like to do some DXing on the commercial radio band (88 - 108Mhz)......
thus I ask can someone recommend to me a tuner for this task or some
specifications that I should consider when looking for a tuner.

Thank you from Peter

I've had a LOT of interest in this unit but, so far no dollars have
been exchanged!...

So here goes again!

I have an original owner, non smoker, PRISTINE, TS940SAT for sale... The
SN is 7100016....It is equipped with the "Banker", which allows front
panel access to the memory channels. Also, equipped with an
International Radio 500HZ CW filter. The antenna tuner came from the
factory. Have the Service Manual. This rig has been used sparingly the
last few years. It performs flawlessly. It is electrically and
cosmetically in mint condition. Price is $1100 shipped...Thanks and
Happy Holidays to all. Lou- N2TU

3389. Prefix ON50

Hi everyone,
In 1998 exist the UBA (Union of the Belgium RadioAmateur) 50 year.
For this opportunity the division from the UBA shall be calling with
the
Prefix : ON50 and then 3 letters.

From 1 Jan. to 31 Dec. 1998 the section ZLZ (Zelzaatse Radio
Association)
shall be opperating with the Call :

***** ON50ZLZ *****

Difference times we shall be qrv on HF en VHF.(Looking for the UBA
Contest)

Good to know:
A qso with ON50ZLZ is good for 6 points for the ZLZ Award.

Qsl by ON7ZT or PO Box 53 B-9060 Zelzate Belgium

That beacon is not an amateur radio beacon, but an intruder. It is
located in Russia. Somewhere I found the information that it is the
beacon of the station "RGT" (who- or whatever that is...).

During night hours, it can be copied loud and clear :-) here in Europe,
too.

Yes, I likely can shed some real light on the "V" beacon you have just discovered on 7002 Khz! No, as you have noted in the ARRL's suggestion, it is not at all in Tokyo, nor, as best we know, is it in "Vladivostok", as has been suggested. Nor is it an Israeli Mossad affair, nor is it a secret commodities market signal network, as I've seen suggested in some SWL mags. Yess, others have been studying it for a LONG time. It is first in my log about 1954 and was likely there a good while before that. In 40 years, here is what I have discovered..

First, it is not the only one of these Single Letter Beacons (SLB's). If, on a cold clear night in the winter, you will simply tune up band to 7038.8, you will hear the letter "P". Go up a hundred cycles and at 7038.9 you can here the letter "S". At 7039.0, a hundred up from there you can hear "C" and, if my memory is correct, at 7039.1 you can hear "K", although that one is in a considerably different area than the other three and arrives from a completely different path. You may also on rare occasions, tune up on 3502 and here the letter "T", which some affectionately called a "Foghorn." I believe I have also VERY rarely heard the letter "B" on 3516 as well. There are MANY more of them outside the ham bands, extending well up into the 20 meter range. Actually, listening to the trio up about 7039 is like madness when the conditions are just right, with all of them in there chirping away and not in any real kind of time-domain synchronization that I can tell from watching them on a recorder. As I started all this 40 years ago, well.... you have just arrived!

What are they? Where are they? That's much more well know to me now. Here is what I've discovered over the years. First, note that I have beam antennas on 40 meters. You heard the "V" beacon at about 1100 GMT, and at your location it could have been either from the north path over the pole, or the south path over the other pole! It can be heard here in W5 in the morning over these two VERY different paths peaking right in line with the terminator line or a few minutes AFTER it passes the site. If you are lucky enough to get a strong signal in the morning, you will hear phase fading on the path as the two signals compete with each other in, say a single vertical that you may be using. From YEARS of listening to it and carefully

charting it's signal path peaking times during the passing of the seasons here in W5 land in Central Texas, I reasoned it had to be in Central Russia. I, at first tended to agree with some who simply said it was in the UL7 oblast in Russia, however there is more to the story.

My closest charting over a long number of years suggested that it was really more northward than just UL7. In fact, I was sort of leaning toward UA9 when I was finally told by a Russian ham in UA9 that it was actually just east of Chevyblsk (I think that's the right spelling!), just east of the Ural mountains at the foot area. That almost perfectly explained some of the reasons it was audible both at sunrise here and also around 0200 GMT, but only at that time from the North polar path. I noticed that there was a strong correlation between UA9 signals on 40CW and this thing and that, second, when it was there, there were no UA9's that worked closer than a couple Khz to it.. chuckle. That also 'tells' me something else. Judging from many years of observation, the old Russian limit of 200 watts, I suspect this particular beacon is running somewhere from 1KW to about 10KW, but I favor the lower limit. I suspect it is not using a beam antenna, but is likely horizontally polarized and that it may be a dipole, simply oriented toward Moscow. Why Moscow?

Well, if you listen to it for long enough, for years, you will discover that it does send more than just "V" letters! One night, I heard it identify. The actual call sign for this thing I have copied on many occasions, happens to be RCQ45. I first heard it call "RAM22 RAM22 de RCQ45 RCQ45 QSV QSV." That's fascinating! Those are Russian calls, typically Russian military calls as well. Later on I heard it call "UWG63 UWG63 de RCQ45 RCQ45", as well as others. Now we know the whole operation is perfectly legal. You see, in Region 1, the Russian military has the use of this 40 meter segment on a shared basis with the hams. Further, although about seven years ago when the lookup was run, RCQ45 was not in the Bern List, RAM22 was - in Moscow. That UWG63 in the Bern List was assigned to Bulin, Russia, way up closer to the Arctic Circle over in far Northeast Siberia! Ok, so we know that this thing is in Russia, and further, by admission of some of the Russian UA9 crew, it is either right on the border of UA9 or UL7 where they join. What then are they for and why have they been there for over 40 years now?

It turns out there is more to come! When you hear one of them open up and break ranks and try to call some place, the called station does not reply, as best I can tell, on that channel. The reply is on some other frequency. I've heard the resulting one-way exchange between RCQ45 sending to RAM22 in Moscow take several forms. All the traffic is sent in straight Q signals plus 5 letter cypher groups. It has been sent with a hand key, a straight key, if you will. At times the operator is so excited, he or she can hardly send good code and the alert signal "V" -NOT- from the tape keyer will be sent almost so rapidly the letters all run together at about as fast a speed as anyone can send on a straight key! Why?

My digging turns up that these beacons exist at remote places in Russia at military sites which are seemingly a part of the Russian Air Defense command. Their purpose appears to be that they simply sit there marking the

channel and a link to Empire Central. When an overflight happens and the site has to report to Empire Central, the beacon is broken and the party attempts to get the attention of Empire Central by hand, so that coded traffic reports can be sent asking for instructions, if needed. Recall that there are miles and miles and miles of Russia out there in this territory with no roads, no telephone or telegraph lines. Early on, before the age of satellites, this was a very understandable way to monitor that vast empty sky or whatever for the outpost and get limited data alerts to home base!

I view the equipment as still old. I believe, from listening to the irregularities in the leading and trailing edges of the characters, that these markers are still keyed from paper punched tape. You can actually hear a tape tear between the dots and dashes on occasion. I believe that some of the sites are actually very poorly attended. It may take them a week or more before they will fix a botched tape! Further, not all the sites host the same equipment. For example, the "V" site transmitter seems to be used on a 200 hertz shift narrow band RTTY circuit until just before it is moved into beacon service around 0200 GMT. I know that because, on several occasions, I have heard the operator fire it up still left in RTTY mode and the "assigned" frequency will be 7001.8 with the letters of the "V" being deviated up to 7002.0, if my memory is correct. They will let it go for a little while, until the operator notices it, then it will go off the air and it will be corrected to CW rather than RTTY.

I've tried to put myself in the Russian's shacks, both at the sending end, as well as the receiving end. What I speculate upon for the receiving end has not only left me in wonderment, but very somber. In that I know all this appears to be going on for YEARS by hand, it almost sounds like they have a HUMAN listening to all this junk endlessly hour after hour. That's almost the only way this could have played out all these years ago, especially when you consider what all that tangled mess of four of them up around 7039 must portend! They are, apparently much lower power than the "V" beacon, and, apparently, from my charting, on the other side of the Urals, more northward and toward Moscow, likely up closer to the Arctic Circle area. That being so, what if... the path were poor, or the poor soul at the other end were lulled to sleep by the drone? ???????

Don't dismiss that! I've been told there are a pile more of these fellers all up and down the east coast of Siberia, up and down near Vladivostok and so on. They pass both intruder alerts and some routine traffic notices on this network and have been doing so for over 40 years now! Still are!

I speculate that this is, perhaps, what really went wrong with KAL007 and how that 747 came to be lost. With a ten minute window for action and this kind of an intruder alert network, it would be easy to have this sort of thing happen. No base commander could risk not taking action, if....

Trying to dismiss it as, no that's impossible, I think back on the 17 year old German kid who flew a Cessna 150 all the way from Germany into Russia and landed it in Red Square in Moscow without even being challenged!

You may speculate about it all now yourself. Your mileage may vary.

Most important, I ask myself, "Why keep these things, we have all this satellite stuff and space technology and all now?" Then, as you have done, come winter time, when that path opens up, the "V" beacon is still there! I think the answer is that we are still dealing with this paradox that is and has always been the puzzle of what is Russia and how does Russia work?

Looking at my prize picture book, "A Day In The Life Of Soviet Russia", where-in a team of photo-journalists was actually permitted on one day, to go ANYWHERE they wanted in Russia to shoot a photo story on their choice....

Mikey would have given anything to have taken his Nikon to...

the "V" SLB site...

Too bad nobody knew enough to shoot that and the Woodpecker, although some photos of it seem to be out here outside Russia... :)

A recent contact on 40CW with another UA9, got me the comment that a few years back a booklet was circulated in Russia, listing the locations and the call signs of all of them! Of course, I asked! Of course I was told, that the party didn't know where the book was any longer... Further the comment was made that the purpose of the things wasn't known, but they sure were all Russian military deals.

In some of the pictures that local hams have attained of Russian ham shacks, while touring Russia and getting to visit our friends over there, there are these curious call signs evident on plaques in some of the shacks that have funny Uxx123 and Ryy456 type calls on them - not at all their "ham" calls! Suddenly, I have a litle more insight on what all this may mean as well.... looking back at our own purpose for the existence of ham radio in the USA. The whole philosophy of Russian civil defense and participation in it take on a whole different perspective, if you view it in that way, don't they?

Now YOU may begin your search for more on this most fascinating creature. One day, perhaps my call book address will gain a blurb or two from somewhere answering some more of the questions... :) Who knows.

Some day you may furnish some more of the answers, as I hope some other person will by seeing this here... Please contribute, if you can.

3393. 11 y/o ham's equipment stolen while in hospital. Can you help? WP4MTI.

Newsgroup: rec.radio.amateur.dx
Date: 1997-12-30 00:00:00 UTC
From: spambuster@greeneggs.com
Message-ID: <68bnsf$913@elf.wang.com>
Source record: 30950

URGENT:
PLEASE FORWARD THIS MESSAGE TO ALL INTERESTED PARTIES.

Happy Holidays.

The Waltham, Mass ARA, needs your help.

Christie Aponte, WP4MTI, is an 11 year old girl from Puerto Rico. Her mom, Laura (WP4MSO) and Grandfather Earle Blizzard (OZ1LHH) originally hail from the New England area, and are well known to the ham community who populate the 146.64 Waltham MA repeater.

Four years ago, Christie, her mom and dad were injured in a horrible car crash. Although her parents escaped with broken bones, Christie was seriously injured and nearly killed. Her condition was so perilous that she had to be airlifted to Boston Childrens Hospital for surgery. She currently is confined to a wheelchair, and doctors are not sure whether she will ever walk again.

During her initial visit to Boston, Kathy Pate (KA1IYR) and Dave Crocker (W1TMO) befriended her, and did an admirable job of making her feel welcome in a strange city far from home. During this first visit, in spite of all of the stress and distractions associated with her medical rehabilitation, she passed her novice license, and began working on a Technician-class upgrade. She attempted the Technician exam with one of the Boston-area ham clubs, but missed her goal by a couple of questions.

If all of these problems weren't enough, a number of other events added to her already heavy burden.

1. Her three closest friends in this country, namely her grandfather, W1TMO and KA1IYR all passed away within a short period of time.

2. Her favorite dog that stood by her side during the first rehab period died while she was undergoing further surgery.

3. Finally, the family home was burglarized while her mom and dad were visiting her at Childrens'. The thieves stole all of the radio equipment that she inherited from her grandfather. This took Christie off the air, and isolated her from all of her radio friends.

This year, Christie is back at Childrens' for painful spinal surgery, and will most likely remain in the hospital over the holidays. In spite of all of this adversity, she still has a great attitude, and is dedicated to getting well again.

Seeing how her family has little time or money to replace the stolen radios, we've decided to collect donations to replace her stolen ham station.

I'm sure that everyone will agree that no child should have to spend Christmas recovering from major surgery in a hospital far from home, and we're hoping that our gift will let her know that she's not alone in this frightening battle. This gift will allow her to listen and talk to local hams using her mom as a control operator. In addition, the radio will hopefully help her to forget her injuries so that she can concentrate on passing the Technician exam to upgrade her novice license.

If you can help bring some joy to an innocent 11 year-old by contributing $20 (or any amount you choose), please mail a check or money order as soon as you can to:

Anne Weldon
KA1PON
14A EMMETT ST
Marlboro, MA
01752

Please include your name, callsign, address, telephone and an email address with your donation so that we can confirm the receipt of your generosity.

We will post full details regarding the purchase on the WARA web page. Any additional moneys collected will be disbursed in an appropriate fashion.

Please send questions to me at n1aup@amsat.org or leave a message with Joe, W1EK at 617-965-1750. Please postpone hospital visits until Christie is back on her feet.

Thanks, and Happy Holidays!

Kip
N1AUP

Help me on this... How much is Phil wanting in US Dollar??? I think I paid $350 back a year plus ago, from someone local and wanting out for a new hobby... Then I added the tone board from someone else who never installed it for (I think) $50... It is the American version, did I do OK??? It makes a great radio and I'm happy. I haven't looked to see what the stores are wanting for a used unit...

Ackkkkk! ... Hope that isn't typical of the info that
appears in "The Daily DX"!!!!! :-) That's an embarrassing
slip, isn't it? But ... could (and does) happen to us all at
one time or another.

Sorry ... couldn't resist that. ... anyway... as others have
already pointed out ... DS prefixes are indeed in (South) Korea.

Cheers
Sandy

Not at all an intruder. See my long post to him about what, at least at
one point in time was the assigned call, RCQ45. What I would like to
know, is, if you happen to have a loop that can get fixes on the 40
meter band, what exact heading you show as a null for it from your QTH?
Similarly, many of us would like to know the headings you can determine
for the four others we know of on 40 meters..

They are:

7038.8 "P"
7038.9 "S"
7039.0 "C"

and at times I think you will find,

7039,1 "K"

The "P, S, C" group are, as we can tell, not in the same location, in
general as "V", but if so, or in any event, further west in Russia.
From a long time of observing them, it appears they are on the west side

of the Urals - whereas "V" appears to be on the east side.. "K" appears to be in a yet further third area from either "V" or the group of 3.

These beacons are too weak in the USA, by far, for the most of the time, to obtain any sort of heading with good null loops. At the time I last was able to check many years ago with the monitoring station for the FCC in Kingsville, TX and they put the "V" beacon on the network for a heading trace, only I, the Kingsville, Texas site and their State of Washington site, could even hear it and neither of thoses FCC sites could, per the EIC, get enough of a signal to accurately DF it. These monitoring sites are equipped with rhombics and Adcock DF ranges and they didn't even have enough capture, or "allegedly didn't", to fix the "V" site on this run.. My antenna at the time was a full sized 3 element quad for 40 meters. :)

The most miraculous thing of all, was on that precise evening, during this little "excercise", the "V" actually broke ranks and identified! When it became very obvious to the crew that the calls were, in fact, absolutely positively identified as Russian military calls, FCC was forced to de-classify the stations as "intruders." They are not. In Region 1, as I explained to the N3, that portion of 40 meters is shared, by treaty agreement, with the military and the hams. Neither the FCC, nor any other international authority group that subscribes to the treaty group has any right to call them "intruders." They have formed, for years, as we think we now understand, a very valuable and functional service for the Russians, albeit hard for many of us to accept, as being what was quite state of the art for decades!

Your contribution to all this, as a European site that can hear them, might be to really try to get a fix on the headings so we can triagulate all of them. We, in the USA have little hope of that because of the weak signal state for them here.

I look at it this way. Many of us have put the pieces together so far. It isn't clear to me why nobody over in Eurpoe will do just a little more to help lay out the full site stratagies for the net and post some heading data!

grin..

Come on, help us out closing the curiousity books on this 40-50 year old "mystery" that isn't - sort of, any more!!

Mike,
Only recently did I hear for the first time the 'S' beacon on 7039.
Your article was very informative on these interesting beacons. Perhaps
you should send it to QST. I think they would find it interesting.

I've got a similar situation at my qth: a 60' tower with a tribander on top. I tried all of your mentioned options...I shunt fed the tower (too noisy due to pure vertical polarization), then tried a sloper (not bad, but the bottom end interfered with activities on the lawn); and best antenna of all turned out to be the inverted v. It seemed to pick up the weakest signals, too. If I had the choice and the space, I'd put up an 80 mtr yagi though, if you really want to work dx. Or try a wire beam fixed in your favorite direction. The key on this band is height, in my opinion. My 60' does nothing compared to the local guys that have twice that height. Get it up as high as you can! 73s, John, K7JY.

3402. Loas XW0 Jan4-14 approx

Newsgroup: rec.radio.amateur.dx

This maybe in QST or CQ but I have not seen it yet. I spoke with AH0W/W7 last night and he was talking about going to Loas on DXpedition Jan4-14 approximately depending on how long to get set up. He did an operation from Kure Is (KH7) awhile back. Said the calls would be XW0A for CW and XW0AW for phone/rtty/etc. Included would be a 6 meter station FWIW. Going from memory here so forgive me if I get something wrong. Dates are local time. I know I can use him for a new one and maybe some others might too.

Usual dxpedition frequencies: 14.195, 21.295, etc.

Be a good test of the new 4/5 element 4 band quad...'the Monster'...Big!
